

S1 MOBILE MAP VIEWER for iOS

Release Notes

Version 1.0 (Build 1.010) June 24th, 2021

Initial Release

The S1 Mobile Map Viewer for iOS is a free application developed by the Service First (S1) Mobile Team. This app is designed to download authoritative agency maps for offline use. Intended to be easy to use, it has some basic tools for your recreation needs. It provides navigation to a user created nav target and displays current GPS location and coordinates. Please note this application is only available for iOS version 13.6 or later.

Download Maps

- Select agency pushpin to initiate map download. Preview map description and size or search for maps by title.
- Newly downloaded maps are added to the map view. Manage maps to remove them from the map view or delete them off your device.
- Bureau of Land Management maps (Orange pins) are available for Oregon and Washington and Nationally for the Forest Service (Green pins). Maps are updated monthly, users should periodically delete and re-download maps to receive the latest updates.

GPS

- GPS location is displayed on the map and coordinates display in the GPS status bar. View current elevation and estimated accuracy information.

Navigation

- Long tap screen to set a navigation pin and activate Navigation mode. Distance and bearing information to the pin are displayed.
- Tap the compass icon to orient the basemap to the direction the mobile device is facing.
