

2021 Antelope Complex Emergency Wild Horse Gather Questions and Answers

Depending on the governor, and state and federal CDC recommendations, the number of media and public in the gather observation site may be limited in order to allow for social distancing. The [CDC](#) has offered guidance to help people visiting public lands prevent the spread of infectious diseases. We will continue to monitor all functions to ensure that visitors adhere to CDC guidance for mitigating risks associated with the transmission of COVID-19 and take any additional steps necessary to protect public health. During the gather, the observants should follow local area health orders including Governor Sisolak's [standards](#) for individuals, businesses and employers, practice [Leave No Trace](#) principles, practice social distancing and avoid high-risk outdoor activities.

Q. What is the official name for this gather?

A. 2021 Antelope Complex Emergency Wild Horse Gather

Q. Where and how will we know when to go and where to meet each day?

A. All media and/or visitors wanting to go to the gather site will need to call the Antelope Complex Emergency Wild Horse Gather information hotline at 775-861-6700 for daily meeting times/location as the time to meet and the meeting location are subject to change.

Q. Will there be any designated public observers at the gather site locations?

A. Yes.

A PAO will meet the public each morning at a specified location and time to escort them to the gather sites. Limitations will only be imposed to ensure safety and accomplishment of the mission. The "Visitation Protocol" and a "Know Before You Go" handout will also be posted on the BLM website, so observers are adequately prepared for the conditions on the gather sites.

Q. What Contractor will be used for this Gather?

A. Cattoor Livestock Roundup, Inc., of Nephi, Utah

Q. How much will this gather cost?

A. The costs for the gather will be calculated at the end of the gather.

Q. Why is this gather necessary?

A. To prevent further deteriorating body condition of the wild horses in the area due to extremely limited forage and water sources, undue or unnecessary degradation of the public lands associated with excess wild horses, and to restore a thriving natural ecological balance and multiple-use relationship on public lands, consistent with the provisions of Section 1333(b) of the 1971 Wild Free-Roaming Horses/burros and Burros Act.

Q. How many horses will be gathered and how many will be removed from the range?

A. The BLM will gather and remove up to 2,200 excess wild horses.

Q. Will the BLM implement any population suppression techniques? If so, what method or fertility control drug will be used and how many animals will be treated and released?

A. No.

Q. What will the remaining herd population of this herd management area be?

A. Estimated at 3,832 wild horses.

Q. How far, in relation to the trap site, are the animals and foals being herded?

A. Fewer than 10 miles.

Q. Why is the BLM removing animals that appear to be or are in good condition?

A. The BLM gathers animals with different body conditions, including some that appear to be or are in good condition. The agency pro-actively gathers excess animals from overpopulated herds on a three-to-five-year cycle to prevent worst-case scenarios.

Q. Does the BLM use whips to move the animals through the pens and chute?

A. The BLM may use flags or noise-making paddles to move animals through the pens and chutes. The flags are usually made by attaching a plastic grocery bag to the end of a sorting stick or buggy whip. The flag prevents the stick or whip from hitting the animal with any sort of impact or sting to it. Seeing and hearing the plastic flag motivates the animal to move away from the source of the stimulus. This technique is similar to those used for domestic animals being trained using resistance-free methods.

Q. Why is the BLM removing animals when, as of June 2021, there are already over 48,879 animals in holding?

A. The BLM must remove thousands of wild horses from the range each year to protect public lands from the environmental impacts of herd overpopulation – such as soil erosion, sedimentation of streams, and damage to wildlife habitat.

In the case of the Antelope Complex, excess animals exist outside the Complex and the gather is needed not only to ensure balance on the range and reversal of downward trends, but to also conform to the directives and policies.

Although the BLM tries to place as many removed animals as possible into private care through adoption or sales, the public's demand for adoptable wild horses has declined sharply over the last 10 plus years, leaving the federal agency in the unsustainable position of gathering excess horses while its holding costs spiral upward.

Q. Where do the removed animals go?

A. Excess wild horses removed will be shipped to the Palomino Valley Wild Horse and Burro Center, in Sparks, Nev., or Axtell contract off-range corrals in Axtell, Utah, where they will be prepared for the BLM's adoption and sales program, or long-term holding facilities located in Midwestern pastures.

Q. What veterinary treatment will the removed animals receive?

A. Once the animals arrive at the Palomino Valley Wild Horse and Burro Center or Axtell contract off-range corrals, the crew will allow them to acclimate to domestic feed and monitor them for a period of time. Following, the animals will be aged (based on the condition of their teeth), de-wormed, vaccinated, blood-tested (for Equine Infectious Anemia), freeze-marked (marked with a cold brand) and stallions will be gelded.

Q. What happens to animals that are not adopted?

A. Un-adopted animals are fed and cared for in either short-term corrals or long-term Midwestern pastures. Animals usually over 10 years old and those passed over for adoption at least three times become eligible for sale, a transaction in which the title of ownership to the animals passes immediately from the Federal government to the buyer. (In the adoption process, the title of ownership passes from the Federal government to the adopter after the individual provides one year of humane care.)

Q. Will any of the animals be sent to slaughter?

A. No. While a December 2004 law granting the BLM sale authority authorizes the agency to sell sale-eligible animals “without limitation,” the Bureau has **not been and is not selling any wild horses and burros to slaughterhouses or to “killer buyers.” All animals in holding retain their status as “wild” animals and remain under the BLM’s protection.**

Q. Is there any livestock grazing in this area?

A. Yes. The Antelope Complex encompasses portions of several livestock grazing allotments: Antelope Valley, Badlands, Becky Creek, Becky Springs, Boone Springs, Chase Springs, Cherry Creek, Chin Creek, Currie, Deep Creek, East Big Springs, Ferber Flat, Goshute Mountain, Lead Hills, Leppy Hills, Lovell Peak, McDermid Creek, North Steptoe, North Steptoe Trail, Sampson Creek, Schellbourne, Spruce, Sugarloaf, Tippet, Tippet Pass, Utah/Nevada North, Utah/Nevada South, Valley Mountain, West Big Springs, White Horse, and West White Horse.

Livestock grazing permittees have voluntarily reduced their use based on drought, limited forage, wild horse numbers in excess of Appropriate Management Level (AML) and horse impacts to existing limited water sources. Livestock use complies with the grazing system outlined in the final multiple use decisions, agreements and term permit conditions that provide for periodic rest and deferment of key range sites

Q. Is the BLM removing horses to make room for more cattle grazing?

A. No. The BLM carries out removal of wild horses from public rangelands to ensure rangeland health and in accordance with land-use plans that were developed in an open, public process. These land-use plans are the means by which the BLM carries out its core mission, which is to manage the land for multiple uses while protecting the land’s resources. Authorized livestock grazing on BLM-administered lands has declined by nearly 50-percent since the 1940s; actual (as distinguished from authorized) livestock grazing on public rangelands has declined by 30-percent since 1971.

Q. Does the wild horse overpopulation impact wildlife and plants?

A. Common wildlife species within the Antelope Complex include antelope, elk, mule deer, blue grouse, sage grouse, coyotes, mountain lions, and bobcats. Currently, the overabundant population of wild horses is adversely affecting valuable habitat needed to support both native wildlife and wild horses.

Wild horses often graze the same area repeatedly throughout the year. Forage plants in those areas receive little rest from grazing pressure. Continuous grazing by wild horses does not allow plants sufficient time to recover from grazing impacts. Such overgrazing results in reduced plant health, vigor, reproduction, and ultimately to a loss of native forage species from natural plant communities. Over time, this greatly diminishes habitat quality as abundance and long-term production of desired plant communities is compromised. If wild horse populations are not controlled in this area, forage utilization will exceed the capacity of the range.

Q. What are some of the effects of wild horse overpopulation on Threatened and Endangered Species?

A. Maintaining the existing wild horse over-population, which would increase with each successive foal crop, would result in continued and increasing impacts to threatened and endangered species populations and habitats. Wild horse populations would increase about 15-25% each year that a gather is postponed. Valley bottom habitats would continue to see locally heavy levels of utilization associated with wild horse use and areas of heavy use would continue to expand as wild horse populations continue to grow.

Q. Where may I learn more about the Wild Horse and Burro Program?

A. Please visit the BLM's website at <https://www.blm.gov/whb>
