

Year: 2018

Inventory Unit Number/Name: OR-015-032A/ Chase

FORM 1

DOCUMENTATION OF BLM WILDERNESS INVENTORY FINDINGS ON RECORD

1. Is there existing BLM wilderness inventory information on all or part of this area?

No Yes X (if more than one unit is within the area, list the names/numbers of those units):

a) Inventory Source:

- a. BLM Wilderness Inventory files for Pacific Power and Light Company (PP&L) Transmission Line: PP&L Roadless Area Inventory Files (1977).
- b. Wilderness – Proposed Initial Inventory: Roadless Areas and Islands Which Clearly Do Not Have Wilderness Characteristics; USDI BLM - Oregon and Washington, April 1979.

b) Inventory Unit Number(s)/Name(s): 1-50; OR- 010-10-2 (1-32)/ Chase

c) Map Name(s)/Number(s): Wilderness Review – Initial Inventory: Final Decision on Public Lands Obviously Lacking Wilderness Characteristics and Announcement of Public Lands to be Intensively Inventoried for Wilderness Characteristics; USDI BLM - Oregon and Washington, August 1979.

d) BLM District(s)/Field Office(s): Lakeview District, Lakeview Resource Area.

2. BLM Inventory Findings on Record:

Existing inventory information regarding wilderness characteristics (if more than one BLM inventory unit is associated with the area, list each unit and answer each question individually for each inventory unit):

Unit#	Size (historic acres)	Natural Condition? Y/N	Outstanding Solitude? Y/N	Outstanding Primitive & Unconfined Recreation? Y/N	Supplemental Values? Y/N
1-32	10,900	N	N	N	N/A
1-50	7,000	N	N	N	N/A
1-32A*	8,064	Y	N	N	N/A
1-50*	7,711	Y	N	N	N/A

*The inventory of this unit was updated in 2012. However, due to a State Office-sponsored Wilderness Inventory Consistency Evaluation and subsequent guidance, the 2012 inventory

analysis and findings are being replaced by this current 2018 inventory review. Documentation of the 2012 inventory can be found in the wilderness inventory project record.

Summarize any known primary reasons for prior inventory findings listed in this table:

In 1977/78 historic Unit 1-32 was described as a mostly flat valley bottom with some low rock rims in the southern portion. Vegetation consisted mostly of greasewood in the flat lands, a grass seeding in the northeast corner, and sagebrush on the southern rims. Internal intrusions to naturalness included two cross fences, a grass seeding, a well, and a few “ways.” Outside intrusions to naturalness included private farmlands on the north and extensive grass seedings to the west, north, and east. The unit was found to lack outstanding opportunities for solitude due the flat topography of the area. Hiking, horseback riding, and camping opportunities were noted as possible recreation activities, though none were found to be outstanding.

In 1979 historic Unit 1-50 was described as containing low, rolling topography with the dominant vegetation being a seeding covering the majority of the unit. The seeding was found to detract from the area’s naturalness and precluded opportunities for solitude or unconfined recreation.

FORM 2

**DOCUMENTATION OF CURRENT WILDERNESS INVENTORY
CONDITIONS**

Unit Number/Name: OR-015-032A/ Chase

(1) Is the unit of sufficient size? Yes No

Between 2007 and 2016, BLM staff conducted field inventory in the area as part of a process to update its road and wilderness inventories and to gather additional information to supplement ONDA’s wilderness information. This fieldwork included photo documentation of the boundary and interior routes and a re-evaluation of wilderness characteristics for this area. Using both ONDA and BLM photos, field logs, and staff field knowledge, the BLM completed route analysis within the area in 2017.

The BLM determined that the inventory unit is bounded by BLM road 6164-G0, 6164-00, and 6164-E0 to the west; 6170-00 and 6160-00 to the south; and 6160-A0 to the east. . Portions of route 6160-00, which formerly separated historic Unit 1-32 and 1-50, was found to no longer meet the wilderness definition of a road. Due to changes in boundary determinations (roads) and cut-outs of unnatural features (water tank, pump house, pipelines), approximately 10,000 acres were added to the unit.

Thus, based on these boundary and road determinations, the BLM found the Chase inventory unit to exceed the minimum size criteria at approximately 18,179 acres of BLM-administered lands.

Additional background on the process the BLM followed during this evaluation is contained in the document, *Wilderness Inventory Maintenance Process for the Lakeview Resource Area, BLM* and in the *Route Analysis Forms*. Both documents can be found in the wilderness inventory file.

DESCRIPTION OF CURRENT CONDITIONS:

This unit is located approximately 8 miles northwest of Alkali Lake, Oregon. It is approximately 9 miles long by 4 miles wide. Topographically, the unit is flat on the eastern (Alkali Valley) and western (upper reaches of Poverty Basin) thirds of the unit with rolling hills (50-600 ft. high) running north to south through the center. The unit also includes minor rims, and a few short drainages (10-50 ft. deep) in the central portion of the unit. Overall, the unit ranges in elevation from 4,340 to 5,083 feet. Vegetation is comprised of sagebrush and grasses.

(2) Is the unit in a natural condition? Yes No N/A

In 1977/78, historic Unit 1-32 internal intrusions to naturalness included two cross fences, a grass seeding, a well, and a few “ways.” Outside intrusions to naturalness included private farmlands on the north and extensive grass seedings to the west, north, and east. There was not found to be in a natural condition.

In 1979, historic Unit 1-50 the contained a seeding that was determined to detract from the area’s naturalness and as such the unit was found to not be in a natural condition.

The unit currently contains the following man-made developments/disturbances: 8,468 acres of seeding, 8,124 acres of wildfire, 812 acres of chemical treatments, 12 miles of fence, 11.75 miles of motorized routes, 6 miles of reclaimed routes, and 3.5 miles of rehabbed cat lines.

Presently, almost 4 decades after the original inventory, these developments are weathered and grown over with herbaceous grasses and sagebrush. As a result, developments now fade into the background of the unit and are largely only noticeable at a close distance (1/4th mile or less) and are thus substantially unnoticeable from further distances. Furthermore, many of the disturbances are located near the perimeter of the unit and, as such, have a small area of influence. Additionally, areas that were seeded or allowed to revegetate naturally have returned to a natural, post fire, appearing condition

Based on a review of all the available information including photos, staff knowledge, and field review, the BLM concluded that the unit appears in a natural condition where the imprints of man are substantially unnoticeable.

(3) Does the unit (or the remainder of the unit if a portion has been excluded due to unnaturalness and the remainder is of sufficient size) **have outstanding opportunities for solitude?** Yes _____ No X N/A _____

In 1977/78, historic Unit 1-32 was found to lack outstanding opportunities for solitude due to the flat topography of the area.

In 1979, historic Unit 1-50 contained a seeding which was found to detract from the area's naturalness and precluded opportunities for solitude or unconfined recreation.

The BLM acknowledges that there are limited opportunities for solitude within the Chase inventory unit. Topographically, the unit is flat on the eastern (Alkali Valley) and western (upper reaches of Poverty Basin) thirds of the unit with rolling hills (50-600 ft. high) running north to south through the center. The unit also includes minor rims, and a few short drainages (10-50 ft. deep) in the central portion of the unit. Overall, the unit ranges in elevation from 4,340 to 5,083 feet. Vegetation is comprised of sagebrush and grasses. These opportunities are less than outstanding as the area's characteristic landscape lacks vegetative screening and existing topographic screening is insufficient to effectively allow those recreating in the area to avoid the sights and sounds of others.

Thus, for the reasons specified above and based on a review of all the available information including (BLM and citizen provided) photos, staff knowledge, and field review, the BLM concluded the Chase inventory unit does not possess outstanding opportunities for solitude.

(4) Does the unit (or the remainder of the unit if a portion has been excluded due to unnaturalness and the remainder is of sufficient size) **have outstanding opportunities for primitive and unconfined recreation?** Yes _____ No X N/A _____

In 1977/78, historic Unit 1-32 was found to possess hiking, horseback riding, and camping opportunities, though none were found to be outstanding.

In 1979, historic Unit 1-50 contained a seeding which was found to detract from the area's naturalness and precluded opportunities for unconfined recreation.

The BLM finds the unit offers limited opportunities for hiking, horseback riding, backpacking, camping, wildlife observation, exploration, scenery, photography, stargazing, trapping, and hunting. However, the BLM determined that the unit does not possess outstanding opportunities for primitive and unconfined recreation through either the diversity of recreational activities possible in the area or by the outstanding quality of one opportunity relative to opportunities found within the Lakeview Resource Area.

(5) Does the unit have supplemental values? Yes _____ No _____ N/A X

Supplemental values were not evaluated as the unit was determined to lack both outstanding opportunities for solitude and or primitive and unconfined recreation, and therefore does not meet the minimum wilderness criteria.

Summary of Findings and Conclusion

Unit Number/Name: OR-015-032A/ Chase

Summary Results of Analysis:

- 1. Does the area meet the size requirements? X Yes No
- 2. Does the area appear to be natural? X Yes No
- 3. Does the area offer outstanding opportunities for solitude or a primitive and unconfined type of recreation? Yes X No NA
- 4. Does the area have supplemental values? Yes No X NA

Conclusion (Check One):

 The area- or a portion of the area- has wilderness character: *(items 1, 2 and 3 must be checked "yes")*.

 X The area does not have wilderness character: *(any of items 1, 2 and 3 are checked "no")*.
