

Year: 2018

Inventory Unit Number/Name: OR-015-004B/ Stevens Butte*

FORM 1

**DOCUMENTATION OF BLM WILDERNESS INVENTORY
FINDINGS ON RECORD**

1. Is there existing BLM wilderness inventory information on all or part of this area?

No _____ Yes X (if more than one unit is within the area, list the names/numbers of those units):

a) **Inventory Source:** Wilderness Inventory – Final Intensive Inventory Decisions; USDI BLM - Oregon and Washington, November 1980.

b) **Inventory Unit Number(s)/ Name(s):** 1-4/ Walker Cabin

c) **Map Name(s)/Number(s):** Intensive Wilderness Inventory - Final Decisions; USDI BLM - Oregon, November 1980.

d) **BLM District(s)/Field Office(s):** Lakeview District, Lakeview Resource Area.

*Note: Unit name was changed to better reflect values and features found within the unit, and to reduce confusion of similarly named inventory units.

2. BLM Inventory Findings on Record:

Existing inventory information regarding wilderness characteristics (if more than one BLM inventory unit is associated with the area, list each unit and answer each question individually for each inventory unit):

Unit #	Size (historic acres)	Natural Condition? Y/N	Outstanding Solitude? Y/N	Outstanding Primitive & Unconfined Recreation? Y/N	Supplemental Values? Y/N
1-4	34,080	N	N	N	N
1-004C*	6,970	Y	N	N	N/A

* The inventory of this unit was updated in 2011. However, due to a State Office-sponsored Wilderness Inventory Consistency Evaluation and subsequent guidance, the 2011 inventory analysis and findings are being replaced by this current 2018 inventory review. Documentation of the 2011 inventory can be found in the wilderness inventory project record.

Summarize any known primary reasons for prior inventory findings listed in this table:

In 1980, the majority of the terrain was described as rolling, with small hills near the Walker Butte area. Most of the unit contained moderate to dense juniper cover. The southern third of the unit opened to sage flats at the north edge of Christmas Lake Valley. There were also three large ephemeral lakes near the northern boundary. The unit contained 5 major vehicle “ways” (25 miles), a very noticeable 500-KV DC power line on the east side of the unit, and developed lakebed pits to the north. Though small segments of the unit were undisturbed, the unit did not appear to be in a generally natural and the works of man were substantially unnoticeable. Terrain and vegetation provided some degree of solitude in small areas, but opportunities were not outstanding. The unit provided some limited opportunities for activities such as photography, wildlife observation, and hunting, but the potential was determined to be less than outstanding. There were no known supplemental values within the unit.

FORM 2

**DOCUMENTATION OF CURRENT WILDERNESS INVENTORY
CONDITIONS**

Unit Number/Name: OR-015-004B/ Stevens Butte

(1) Is the unit of sufficient size? Yes No

Between 2008 and 2016, BLM staff conducted field inventory in the area as part of a process to update its road and wilderness inventories and to gather additional information to supplement ONDA’s wilderness information. This fieldwork included photo documentation of the boundary and interior routes and a re-evaluation of wilderness characteristics for this area. Using both ONDA and BLM photos, field logs, and staff field knowledge, the BLM completed route analysis within the area in 2017.

The BLM determined that the inventory unit is bounded by a right-of-way for Country Road 5-12D and private lands to the west; BLM Road 6171-CA and private lands to the north; BLM interim numbered road 6171-CF to the east; and private lands to the south. Additionally, due to a finding that BLM interim numbered road 6171-CH no longer meets the wilderness definition of a road and changes in boundary determinations (road right-of-ways buffer corrections), approximately 732 acres were removed from the unit.

Thus, based on these boundary and road determinations, the BLM found the Stevens Butte inventory unit to exceed the minimum size criteria at approximately 6,239 acres of BLM-administered lands.

Additional background on the process that the BLM followed during this evaluation is contained in the document, *Wilderness Inventory Maintenance Process for the Lakeview Resource Area, BLM* and in the *Route Analysis Forms*. Both documents can be found in the wilderness inventory file.

DESCRIPTION OF CURRENT CONDITIONS:

The unit is located approximately 16 miles north of Christmas Valley, Oregon. The unit is approximately 6 miles long by 2 miles wide. Topographically, the unit is comprised of a half-dozen small buttes (including Stevens Butte, 50 – 100 feet high) in the north, rolling terrain and a small rim to the south, and 4 miles of Walker Creek drainage (10 – 30 ft. deep) along the western boundary. Overall, the unit ranges in elevation from 4,345 – 4,682 feet.

Vegetatively, the northern three-fourths of the unit, approximately 4,500 acres, is covered in moderate to high-density western juniper stands, with old-growth characteristics.

(2) Is the unit in a natural condition? Yes No N/A

In 1980, the inventory found the unit contained 5 major vehicle “ways” (25 miles), a very noticeable 500-KV DC power line on the east side of the unit, and developed lakebed pits to the north. Though small segments of the unit were undisturbed, the unit did not appear to be in a generally natural and the works of man were substantially unnoticeable.

The unit currently contains the following man-made developments/disturbances: 6 acres of wildfire, 2 miles of fence line, 3 miles of motorized routes, and 1 reservoir.

Presently, almost 4 decades after the original inventory, these developments are weathered and grown over with herbaceous grasses, sagebrush, and juniper. As a result, developments now fade into the background of the unit and are largely only noticeable at a close distance (1/4th mile or less) and are thus substantially unnoticeable from further distances. The topography and vegetation of the area also plays a large role in screening disturbances and man-made developments.

Based on a review of all the available information including photos, staff knowledge, and field review, the BLM concluded that the unit appears in a natural condition where the imprints of man are substantially unnoticeable.

(3) Does the unit (or the remainder of the unit if a portion has been excluded due to unnaturalness and the remainder is of sufficient size) **have outstanding opportunities for solitude?** Yes No N/A

The 1980 inventory determined terrain and vegetation provided some degree of solitude in small areas, but opportunities for solitude were not outstanding.

The BLM determined that there are several outstanding opportunities for solitude across the unit due to some topographic screening in the north, but mostly due to widespread vegetative screening across the unit. Topographically, the unit is comprised of a half-dozen small buttes (including Stevens Butte, 50 – 100 feet high) in the north, rolling terrain and a small rim to the south, and 4 miles of Walker Creek drainage (10 – 30 ft. deep) along the western boundary. Overall, the unit ranges in elevation from 4,345 – 4,682 feet. Vegetatively, western juniper stands have greatly expanded in height, width, and density. The northern three-fourths of the unit, approximately 4,500 acres, is covered in moderate to high-density

western juniper stands, with old-growth characteristics. Due in large part to the above-described vegetative screening throughout the unit, and topographic screening to a lesser degree, one would easily be able to avoid the sights and sounds of others.

Thus, for the reasons specified above and based on a review of all the available information including (BLM and citizen provided) photos, staff knowledge, and field review, the BLM concluded the Stevens Butte inventory unit possesses outstanding opportunities for solitude.

(4) Does the unit (or the remainder of the unit if a portion has been excluded due to unnaturalness and the remainder is of sufficient size) have outstanding opportunities for primitive and unconfined recreation? Yes No N/A

The 1980 inventory found the unit provided some limited opportunities for activities such as photography, wildlife observation, and hunting, however the potential of these activities were determined to be less than outstanding.

The BLM finds the combination and diversity of hiking, horseback riding, backpacking, camping, wildlife observation, exploration, scenery, photography, stargazing, trapping, and hunting are exceptional. The BLM determined that options for exploration and route finding among dense, old-growth, juniper stands represent unique opportunities for primitive and unconfined recreation.

5) Does the unit have supplemental values? Yes No N/A

The BLM found the unit to possess archaeological and geological values as well as the presence of pronghorn antelope, mule deer, elk, pigmy rabbit, and sage-grouse habitat. Additionally, approximately 2 miles of ONDA's 750-mile Oregon Desert Trail ("virtual"/GPS track) crosses the southern portion of the inventory unit.

Summary of Findings and Conclusion

Unit Number and Name: OR-015-004B/ Stevens Butte

Summary Results of Analysis:

- 1. Does the area meet the size requirements? X Yes No
- 2. Does the area appear to be natural? X Yes No
- 3. Does the area offer outstanding opportunities for solitude or a primitive and unconfined type of recreation? X Yes No NA
- 4. Does the area have supplemental values? X Yes No NA

Conclusion (Check One):

- X The area- or a portion of the area- has wilderness character: *(items 1, 2 and 3 must be checked "yes")*.
- The area does not have wilderness character: *(any of items 1, 2 and 3 are checked "no")*.
