“2020 Paisley Desert HMA Emergency Wild Horse Gather”
Questions and Answers

Q. What is the official name for this gather?
A. 2020 Paisley Desert HMA Emergency Wild Horse Gather

Q. Will there be any designated public observers at the trap site?
A. Yes, if gathering on public lands. Limitations will only be imposed to ensure safety and accomplishment of the mission. A “Know Before You Go” handout will also be posted on the BLM website, so observers are adequately prepared for the conditions on the gather sites.

All media and/or visitors wanting to go to the gather site must call Lisa McNee, Public Affairs Specialist, at (541) 947-6811 for daily meeting times as the time to meet is subject to change.

The number of media and public in the gather observation site may be limited to allow for social distancing. The CDC has offered guidance to help people visiting public lands prevent the spread of infectious diseases. We will continue to monitor all functions to ensure that visitors adhere to CDC guidance for mitigating risks associated with the transmission of COVID-19 and take any additional steps necessary to protect public health. During the gather, the observants should follow local area health orders including Governor Brown’s standards for individuals, businesses and employers, practice Leave No Trace principles, practice social distancing and avoid high-risk outdoor activities.

Q. Why is this gather necessary?
A. The gather is necessary to address emergency conditions within the Paisley Desert HMA that threaten wild horse health and well-being, as well as crowding out wildlife that also compete for these limited resources. If a sufficient number of excess wild horses are not promptly removed from the area where water resources have become extremely limited, it is anticipated that individual wild horse body condition will continue to decline and that the most vulnerable horses - mares and foals in particular - will die.

In order to alleviate the competition for the limited water resources and prevent body condition decline and/or death of the most vulnerable horses, the BLM, has hauled water until an emergency gather operation could be conducted and approximately 750 excess wild horses removed from the Paisley Desert HMA. The BLM has determined the situation within the area is an emergency because the area water sources have gone dry. The current water resources are insufficient for the overpopulation of wild horses residing within the area. The situation is too extreme to be addressed through the normal gather cycle (BLM Handbook 4.7.2).

As well as prevent undue or unnecessary degradation of the public lands associated with excess wild horses, and to restore a thriving natural ecological balance and multiple-use relationship on public lands, consistent with the provisions of Section 1333(b) of the 1971 Wild Free-Roaming...
Horses and Burros Act. The BLM is concerned that the overpopulation of wild horses is impacting wildlife, such as mule deer, elk, and pronghorn antelope.

The Paisley Desert HMA is overpopulated and animal conditions are declining due to range degradation and lack of sustainable water resources. Regular monitoring has occurred to observe wild horse body condition and range and water conditions. Dependent on the location within the HMA animals body conditions have been observed in the range of 1-4.

**Q. How many horses will be gathered and how many will be removed from the range?**

A. The BLM will gather and remove up to 750 excess wild horses from in and around the Paisley Desert HMA, located in Lake County, about ten miles north east of Paisley, Oregon.

**Q. What will the remaining herd population of these HMAs be?**

A. Approximately 60 wild horses will remain in the Paisley Desert HMA.

**Q. Is there livestock grazing in this area?**

A. There is permitted livestock grazing throughout the HMA but nonuse has been taken on a lot of the permitted allotments due to lack of forage from wild horse use.

**Q. Is the BLM removing horses to make room for more cattle grazing?**

A. No. The BLM carries out removal of wild horses and burros from public rangelands to ensure rangeland health and in accordance with land-use plans that were developed in an open, public process. These land-use plans are how the BLM carries out its core mission, which is to manage the land for multiple uses while protecting the land’s resources. Authorized livestock grazing on lands administered by the BLM has declined by nearly 50% since the 1940s; actual (as distinguished from authorized) livestock grazing on public rangelands has declined by 30% since 1971.

**Q. Does the wild horse overpopulation impact wildlife and plants?**

A. Vegetation varies from Big Sagebrush, Wyoming Big Sagebrush, Low Sagebrush, Bluebunch Wheatgrass, Indian Ricegrass, Thurber's Needlegrass, Needle and Thread Grass, Bottlebrush Squirreltail and Basin Wildrye. Salt desert shrub communities including shadscale, greasewood and inland saltgrass occur to a limited extent throughout the HMA.

Other species within the Paisley Desert HMA found to a lesser degree include the following:

Grey Rabbitbrush, Green Rabbitbrush, Silver Sagebrush, and various forbs.

The area is also utilized by domestic livestock and numerous wildlife species. Typical wildlife species found in the area include mule deer, pronghorn antelope, California bighorn sheep, chukar, coyote, and various rodents.

Wild horses often graze the same area repeatedly throughout the year. Forage plants in those areas receive little rest from grazing pressure. Continuous grazing by wild horses does not allow plants sufficient time to recover from grazing impacts. Such overgrazing results in reduced plant
health, vigor, reproduction, and ultimately to a loss of native forage species from natural plant communities. Over time, this greatly diminishes habitat quality as abundance and the long-term production of desired plant communities is and will be compromised. If wild horse populations are not controlled in this area, forage utilization will exceed the capacity of the range.

**Q. What are some of the effects of wild horse overpopulation on Threatened and Endangered Species?**

A. Maintaining the existing wild horse over-population, which would increase with each successive foal crop, (approximately 15-20% annually in the HMA) would result in continued and increasing impacts to threatened and endangered species populations and habitats. Upland habitats would continue to see locally heavy levels of utilization associated with wild horse use, in which areas of heavy use would continue to expand as wild horse populations continue to grow. Continued heavy grazing would occur on spring meadow systems and creeks adversely effecting Sage-grouse habitat.

**Q. Why is the BLM removing horses when there is already over 47,000 animals currently in holding?**

A. The BLM must remove thousands of wild horses and burros from the range each year to protect public lands from the environmental impacts of herd overpopulation – such as soil erosion, sedimentation of streams, and damage to wildlife habitat.

Although the BLM tries to place as many of the removed animals as possible into private care through adoption or sales, the public’s demand for adoptable wild horses has declined sharply over the last 10-plus years, leaving the federal agency in the unsustainable position of gathering excess horses while its holding costs spiral upward.

**Q. Why does the BLM use helicopters to gather horses?**

A. Helicopter-driven gathers have proven to be more humane, effective, and efficient than other types of gather methods when large numbers of animals need to be removed over wide areas or rugged terrain. Helicopters are able to move horses and burros at a proper pace; moreover, helicopter pilots can keep mares and foals together better than a horseback rider and can also better move the animals around such barriers as deep ravines, fences, or roads.

**Q. How far, in relation to the trap site, are the horses and foals being herded?**

A. That will be determined by the Lead Contracting Officer’s Representatives (COR) and the contractor but varies depending on health of the animals, terrain, and weather.

**Q. Does the BLM use whips to move the horses through the pens and chute?**

A. The BLM uses flags or noise-making paddles to move horses through the pens and chutes. The flags are usually made by attaching a plastic grocery bag to the end of a sorting stick or buggy whip. The flag prevents the stick or whip from hitting the horse with any sort of impact or sting to it. Seeing and hearing the plastic flag motivates the animal to move away from the
source of the stimulus. This technique is similar to those used for domestic and wild horses being trained using resistance-free methods.

**Q. What Contractor will be used for this Gather?**

A. Warner Livestock LLC

**Q. How much will this gather cost?**

A. The BLM will calculate costs at the end of the gather.

**Q. Why is the BLM removing horses that appear to be or are in good condition?**

A. The BLM gathers horses with different body conditions, including some that appear to be or are in good condition. The agency pro-actively gathers excess animals from overpopulated herds on a three- to-five-year cycle to prevent worst-case scenarios.

**Q. What veterinary treatment will the removed horses receive?**

A. The horses will be aged (based on the condition of their teeth), de-wormed, vaccinated, blood-tested for enzyme immunoassay (EIA), and freeze-marked (marked with a cold brand).

**Q. Where do the removed horses go?**

A. Excess wild horses, removed from this gather, will be transported to the BLM’s Wild Horse Corrals in Hines, Oregon.

**Q. What happens to horses that are not adopted?**

A. Un-adopted horses are fed and cared for in either short-term corrals or long-term pastures. Wild horses over 10 years old and those passed over for adoption at least three times become eligible for sale, a transaction in which the title of ownership to the animals passes immediately from the Federal government to the buyer. In the adoption process, the title of ownership passes from the Federal government to the adopter after the individual provides one year of humane care.

**Q. Will any of the horses be sent to slaughter?**

A. No. While a December 2004 law granting the BLM sale authority authorizes the agency to sell sale- eligible animals “without limitation,” the Bureau has **not been and is not selling any wild horses to slaughterhouses or to "killer buyers."** All horses in holding retain their status as “wild” animals and remain under the BLM’s protection.

**Q. Where may I learn more about the Wild Horse and Burro Program?**

A. The BLM’s Website is located at [www.blm.gov/whb](http://www.blm.gov/whb).
