VAUQUELINIA CALFORNICA SSP. PAUCIFLORA	ROSEWOOD, ARIZONA	SPECIES OF CONCERN	WATCH					HYPOTHETICAL	

STATUS DEFINITIONS

THREATENED= Any species which is likely to become endangered within the foreseeable future throughout all or a significant portion of its range. (Designated by the USFWS)

ENDANGERED= The classification provided to a species in danger of extinction within the foreseeable future throughout all or a significant portion of its range. (Designated by the USFWS)

BLM SENSITIVE= (a) Species is a federally designated candidate or proposed for ESA listing or has proposed critical habitat, or is a delisted species within 5 years of delisting; (b) Species is native to BLM-administered lands for which the BLM has the capability to significantly affect the conservation status through management; (c) There is evidence that a species has recently undergone, is undergoing, or is predicted to undergo a downward trend such that the viability of the species or a distinct population segment of the species is at risk across all or a significant portion of its range; (d) The species depends on ecological refugia or specialized or unique habitats on BLM-administered lands, and there is evidence that such areas are threatened with alteration such that the continued viability of the species in that area would be at risk.

BLM WATCH= An informal list of species that are declining or otherwise rare, and occur peripherally to BLM land or hypothetically occur on BLM land, or are species that are declining or may decline in the future, but do not meet the criteria for sensitive designation. Species on the watch list have no protection under BLM policy. No action via NEPA or coordination with species specialists or outside agencies or entities is required for the completion of land use activities. The list represents species for which additional information on rarity, occurrence, and population trends is needed before further consideration for BLM sensitive designation can be given.

PETITIONED= Positive 90-day finding. Consensus to amend the status of a species based on the support of adequate biological data. (Designated by the USFWS)

SPECIES OF CONCERN= Refers to species which might be in need of concentrated conservation actions. Such conservation actions vary depending on the health of the populations and degree and types of threats. At one extreme, there may only need to be periodic monitoring of populations and threats to the species and its habitat. At the other extreme, a species may need to be listed as a Federal threatened or endangered species. Species of concern receive no legal protection and the use of the term does not necessarily mean that the species will eventually be proposed for listing as a threatened or endangered species. (Designated by the USFWS)
