

Terms and Conditions

Carbon Dioxide Geologic Sequestration Exploration and Site Characterization Permit

1. If onsite characterization activities, such as establishing access roads, drainage facilities, or drilling wells, have not been initiated within 1 year from the effective date of the authorization, the permittee will provide the Bureau of Land Management (BLM) good cause as to the nature of any delay, the anticipated date of installation of facilities, and evidence of progress toward characterization activities.
2. The permittee must submit to the BLM authorized officer on a semiannual basis digital photos along with a written description that demonstrate progress as proposed in the permit application and plan of development, beginning 6 months from the date of permit authorization. Digital photos of not less than 2 megapixels, geographic coordinates of the location of each photo, and a descriptive statement must be posted on a secure website and the BLM authorized officer notified of the availability and location of the website each time photos are posted. If the permittee is unable to post the photos to a website, the permittee must submit the photos and location information on a compact disk(s) to the BLM authorized officer at the address of the authorizing office.
3. Within 60 days of construction completion, the permittee must submit to the BLM authorized officer data in a format compatible with the BLM Arc-Geographic Information System (GIS) incorporating all design modifications, field changes, and corrections or deviations during construction for all constructed facilities and access to those facilities. All geospatial data must be submitted in either an ArcGIS compatible format (shapefile or geodatabase) or AutoCAD export *.dwg file. All AutoCAD files must include the projection information and/or spatial (datum) reference to allow import into a spatially referenced GIS format. The preferred spatial reference for all geospatial data is the Geographic Coordinate System (GCS) North American 1983. If the permittee is unable to send the data by email, the permittee must submit the data on compact disk(s) to the appropriate BLM field office. If for any reason the location or orientation of the geographic feature associated with the project changes, the permittee must submit updated GIS data to the BLM authorized officer within 30 days of the change.
