

Attachment 1: Deworming and Vaccination Schedule

Table 1: Deworming Schedule for Wild Horses and Burros at Short-Term Holding Facilities

Treatment	Adult Older Than 1 Year		Foals (Born in the Current Foaling Year)	
DeWorming	Primary Dose	Every 180 days	Primary Dose	Every 180 days or more frequent as facility conditions dictate.

Table 2: Vaccination Schedule for Wild Horses and Burros at Short-Term Holding Facilities

Vaccine	Adult Older Than 1 Year		Foals (Born in the Current Foaling Year)	
	Primary and Initial Booster	Maintenance Booster	Primary and Initial Booster	Second Foal Booster
Influenza	Primary + 1 Booster (3-4 weeks apart)	Every 180 days	Primary + 1 Booster (3-4 weeks apart)	2 nd Booster 30-90 days after 1 st . After that Every 180 days.
Rhinopneumonitis	Primary + 1 Booster (3-4 weeks apart)	Every 180 days	Primary + 1 Booster (3-4 weeks apart)	2 nd Booster 30-90 days after 1 st . After that every 180 days.
Strangles	Primary + 1 Booster (3-4 weeks apart)	Every 180 days	Primary + 1 Booster (3-4 weeks apart)	2 nd Booster 30-90 days after 1 st . After that every 180 days.
Eastern & Western Encephalomyelitis	Primary + 1 Booster (3-4 weeks apart)	Once a year	Primary + 1 Booster (3-4 weeks apart)	2 nd Booster 30-90 days after 1 st . After that once a year.
Tetanus	Primary + 1 Booster (3-4 weeks apart)	Once a year	Primary + 1 Booster (3-4 weeks apart)	2 nd Booster 30-90 days after 1 st . After that once a year.
Rabies*	Primary	Once a year	Primary + 1 Booster (3-4 weeks apart)	2 nd Booster 30-90 days after 1 st . (Optional based on veterinary contract requirements) After that once a year.
West Nile Virus*	Primary + 1 Booster (3-4 weeks apart)	Once a year	Primary + 1 Booster (3-4 weeks apart)	2 nd Booster 30-90 days after 1 st . After that once a year.

*Animals destined for long-term holding facilities shall not be given rabies or West Nile vaccinations if operationally practical within facility.

A national contract for the dewormers and vaccines listed above will continue to be administered by WO-260. An additional dewormer moxidectin will be added to the National Vaccine contract to provide facility managers a second type of deworming product to act against a broader array of internal parasites. Multiple field “ordering officials” will order and receive shipments for their respective short-term holding facilities. The WO-260 will receive all invoices and prepare requisitions for payments to the contractor. Vaccines and dewormers will be sent directly to the ordering facilities.
