

S1 MOBILE MAP VIEWER

Quick Reference Guide, Last Updated: 9/29/2021

Welcome to **S1 Mobile Map Viewer**. This application is designed to download authoritative maps that you can take offline. The first step is to download some maps!

- 1 Tap the **DOWNLOAD MAPS** icon in the top right corner of the screen
- 2 Navigate and select a pin to find the map you want to download
- 3 Tap info button and select the **DOWNLOAD TO DEVICE**
- 4 Enable the apps use of location and you are ready to take your map offline

Now you are ready to go offline - Application Features and Managing your Maps

- 5 The blue circle with directional arrow in the map view is your location
- 6 Location coordinates appear at the bottom with a map compass icon. Tap the compass to enable compass mode (direction of travel)
- 7 Pull the window up from the bottom of the screen to see both Location and Map information.
 - a Location window displays: XY Coordinates, Dynamic Compass Rose, Current elevation and accuracy metrics.
 - b Maps window displays a list of maps available in the map view and maps downloaded to the device but not currently loaded in the map view. Remove or delete a map by selecting the red icon . Add a map to the map view by click the green icon .
- 8 Long press in the map view to set a navigation. A pin will be placed at that location and the distance and bearing information will appear in the Location window
- 9 Click the pin icon in the location window to clear the navigation point.
