

NPR-A Weekly Weather and Tundra Travel Report, week of 6/18/21

Arctic District Office, BLM-Alaska

Conclusion: Ground temperatures continued to warm overall and thaw at the surface. Soil temperatures are now well above the 23° F (-5° C) at 12 inches (30 cm) temperature standard. At most of the stations, snow has been completely gone for almost two full weeks. Rivers within NPR-A are flowing.

The BLM and USGS maintain a network of monitoring stations across the NPR-A. These stations report real-time data* on snow and soil conditions that may be used to help support the planning of tundra travel within NPR-A. For reference, the tundra may be considered open for off-road travel when snow depths average a minimum of 6 inches (15 cm) and the ground is frozen to a minimum of 23° F (-5° C) at 12 inches (30 cm).

For questions, please contact Matthew Ferderbar: mferderbar@blm.gov or Katie Drew: ksdrew@blm.gov. The number of stations reporting, and the dates of their last report may vary throughout the winter due to telemetry delays or failures. Station locations are depicted on the map above. The data shown is considered raw data and is reported "as-is". * The number of stations reporting, and dates of their last report may vary throughout the winter due to telemetry delays or failures. Station locations are depicted on map above. **The weekly soil station average is calculated using only data from stations that have successfully transmitted for that reporting week.
