Organization: EPA	E-mail Address: wilkening.matt@epa.gov

Specific Comments:

Item	Section/Page	Comment	Response
1.	Section 2.0, Page 2-1	This section notes that the workplan addresses 3 of 5 tasks. A citation of where information regarding the following tasks, the debris removal and onsite disposal and soil remediation, can be found.	Additional discussion regarding the debris removal and on-site disposal will be included in the text. The text will also indicate that if impacts to soil are identified, alternatives will be discussed over the winter and soil remediation will be conducted in 2011.
2.	Section 2.1, Page 2-2, 4 th Paragraph	This paragraph discusses, among other things, locations of samples at the surface, five feet and ten feet. The reasoning for the samples at depth is not provided. EPA recommends the following; surface soil sampling is restricted to the first six (6) inches, then a sample at two feet which is useful for potential eco risk analysis and then at 10 feet or the dept of refusal for the hand auger which ever comes first.	Text in this section will be revised to indicate that samples will be collected at the surface (0 to 6 inches bgs), 2 ft bgs, and 10 ft bgs or depth of refusal of the hand auger, whichever comes first.
3.	Section 3.1, Page 3-1	Provide the cleanup values for explosives as well as those for petroleum products.	Cleanup values for explosives will be added to Section 3.1.
