I am a retired person of 74 years of age. I have a few years left in my life but my real concern is for the future of my community and the children that have great expectations for their welfare and safety. My specific concern is that the BLM of the United States of America is considering a proposal to lease land to oil companies for the purposes drilling in my County of Denton in Texas. More specifically, drilling in and around Lewisville Lake in Hickory Creek Texas, an area which serves not only as a major source of recreation for the citizens of Denton County, but also Dallas, Collin, Wise, and surrounding counties.

The real danger of drilling in the Lewisville Lake area is the contamination of the drinking water for Denton and Dallas County residents. The Lake is a major source of drinking water for thousands of residents.

As an extension of the Federal Government, the BLM is sworn to be the protector of it's people and public lands and natural resources, it behooves you to make appropriate investigation regarding said proposal. We all know the failure of oil companies to clean up after an "accident" and the number of years it threatens not only could life be in
