

Fax objecting to drilling in, on, under or close to Lake Lewisville in North Texas

505-954-2010 Feb. 18, 2016

*The Bureau of Land Management New Mexico Office
P.O. Box 27115
Santa Fe, NM 87502-0115*

We STRONGLY object to drilling in, on, under or anywhere close to Lake Lewisville in North Texas! The Lake is an important water source for many communities and it is a wild life refuge for many species.

We also object to the minimal amount of time that the BLM gave for public comment. If not for the media, we would not have even known about this issue.

You should not risk the possibility of any potential contamination. No amount of risk is acceptable. You may feel that drilling is safe, but things can go wrong in the future and it is not right to jeopardize a water source for so many people, for fish and wild life and for future generations. It would be an irresponsible and reprehensible act.

I notice that President Obama protected 500,000 acres from ever being drilled in New Mexico so that wild life and habitat could be protected. I am sending him this letter so that he can work to protect fish, wild life, water and many species on Lake Lewisville, including the Human species. The Lewisville Lake Dam is already compromised and seismic changes from drilling could create a catastrophe downstream for many cities, including Dallas, TX.

Oklahoma is now the number one state for earthquakes in the US. The state never had earthquakes before so much drilling occurred. Take a look at the press archives regarding the Lake Lewisville Dam and ask yourself in good conscience if it is worth the risk to allow more or extensive drilling under the lake.

Please do not allow this!

Sincerely,
