Bureau of Land Management:

As a mother of two children and fifteen year resident of Flower Mound, I am writing to protest gas drilling underneath Lewisville Lake. I am against the auctioning of natural gas leases under the lake because of possible contamination to the lake. The lake is a major water source for North Texas. There have been many examples of human error where drilling accidents have occurred and contaminated ground water. The risks of contaminating such a large source of our drinking water is not worth the reward.

Also, since the dam was built years ago, do we know the effects gas drilling may have on the stability of the aging dam. Maybe we should have a study of impacts to the dam before the auctioning of leases should proceed.

In looking at what contaminated water in Flint, Michigan has done to the health of the community and to the businesses of the community, we must be careful to protect our water in North Texas.

Sincerely,

Dulcinea Arredondo
