

To the Land Bureau of Management New Mexico State Office

2-16-16

Dear Bureau of Land Management,

Please do not sell off the land mineral rights for fracking! We have so much at stake here on the wet lands and beyond in Denton County in Lake Lewisville. I am a resident of Hickory Creek, Lake Dallas, Denton County. I am a land owner and I pay my taxes every year on time and I LIVE HERE. I have lived here for over 30 plus years. I have lived in the same house since I married a Navy Veteran and raised his two sons. I live in a 100 year old cabin and I wouldn't want the vibrations from this fracking to impact my home foundation. I am a widow of a Navy Veteran on a very tight budget and I can't imagine what effect it would have on my life.

The fish and fauna would be so affected especially now with the construction surrounding the bridge at Lake Lewisville. They and we have endured so much impact from the years of displacement. The animals are moving, the people are moving, the economy is moving (strained). The floods in the spring last year, made it even worse when it hit us last year, but we needed it.... We have drought every year! We need less impact for the sake of the towns stability, figuratively and literally. Why make it worse?

The town needs to rebuild businesses and the lake rebuild its balance of nature to preserve its NATURAL Resources for the fish and fauna. The waters are from the Trinity River to North Texas and this would just be another issue during the drought in Texas. Rains come and go, but the drought is always consistent In Texas. This fracking would make it even worse. I plead you to NOT Auction off or "SELL OUT".

This is a city of Trees and Preservation which needs the water. If you Frack you Crack It, and the trees in the surrounding area will suffer and the chain reaction of wildlife will suffer. The people who live here have suffered enough. With the bridges from Lake Lewisville to Little Elm, the Lewisville Lake Construction in Denton, Corinth, Shady Shores, Hickory Creek, and Lake Dallas.

The only people who would benefit would be the Foundation Repair businesses, Realtors, and the medical community. Fracking is environmentally dangerous as we've seen in many many reports. DO NOT DO THIS TO OUR TOWNS.

Sincerely, Jennifer L. Watson
