

February 19, 2016**To Whom it may concern,**

It has come to my attention that property around Lake Lewisville in Denton County, Texas is up for bid and the proposed use has been reported as drilling under the Lake for "Gas". Please be aware this lake is the main supply of "Drinking Water" for many communities around the lake including Dallas. As everyone is aware **"Fracking"** is a very lethal agent. It has been proven time and time again to cause all types of health issues and it has been proven that the chemicals used are seeping into ground water supplies causing irreversible health issues. I am against "Fracking" I have children and grandchildren that live in this area around the lake where you are wanting to drill. **There should be other uses for this property and they should be explored rather than having the Gas and Oil Companies dictate because of their influence over our State elected officials.**

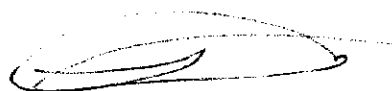

Think about it for a moment close your eyes and pretend you live hear.....you have children.....you have grand children....all of them and yourself drink this water...now imagine the water has turned to poison.....how do you feel about "Fracking" NOW????

Please do not "Poison Lake Lewisville" If we cannot be guaranteed clean drinking water **it should be illegal** to drill under or around any lake that serves as the main source of **clean drinking** water.

Please consider our objections,

Donna Mathews
