BLM officials:

I am opposed to the auction of lease on drilling rights below Lewisville Lake, TX. An independent study "specific" to the Lake Lewisville area is necessary before proceeding with any fracking in this area. The dam has already been designated as the eight highest risk dam in the country. I live downstream of this dam and I have absolutely no confidence in a government organization declaring it is safe to proceed with fracking. This includes the Army Corps of Engineers and the BLM.

As a minimum, the party that secures the lease should be required to assume, at the time of lease acquisition, full criminal and financial responsibility for any dam and downstream damage resulting from a dam failure in association with seismic activity.

Regards,

Don Leuck
