

2/4/16

Dear Bureau of Land Management
New Mexico State Office,

This letter is to protest the live auction sale in NM on 4/20/16 of the public land next to Lake Lewisville for fracking rights. This land is right next to our drinking water supply in North Texas. Fracking uses toxic chemicals mixed with millions of gallons of fresh water and sand to break up the shale to release natural gas. Any problems, and there can be numerous, will result in the destruction of our water supply. Please do not let this happen - please stop the auction of Texas' public land for fracking/mineral rights!

I have already contacted my officials (US Congressman Burgess and TX State Representative Crowover) asking them to help stop this potential disaster from taking place. With all of the current water problems in Michigan and Ohio, why would we want to create a problem in North Texas? Fresh water is our human right and we cannot frack near it! Also, look at the horrific methane leak in Porter Ranch, California due to the natural

gas well leak since October. Thousands of people had to leave their homes to escape the toxic fumes, not to mention the havoc the leak is causing to our environment.

Please, I urge you, for the rights of those living near Lake Lewisville in Texas, don't sell our public land for fracking/mineral rights! We need clean, safe drinking water!

Thank you for your time.

Sincerely,
Melissa Treadaway
