RE: Specific Use Fracking at Location #43 Lake Lewisville in Lewisville, TX 75067

I formally protest the request to put Location #43 up for action for the following reasons

- 1) Water contamination is a major issue when oil and gas activity is permitted to drill near a reservoir used for drinking water, there is also the very real possibility for seismic activity and earthquakes in North Texas. The possibility of earthquakes and re-awakened ancient faults in North Texas. - See more at:
<http://www.lewisvilletexan.com/xoops/modules/news/article.php?storyid=4164#sthash.7M5x8a6d.dpuf> The Lake where this drilling is to occur has a dam with a “certain to fail” report on its health which is a major reason this highly populated area should not be included in your next experiment. Lake Lewisville serves as the primary drinking water reservoir for Dallas and much of North Texas. Camelot Landfill just lost a case for threatening that very same water reservoir. The Cities of Denton County and people in the area are very well versed as to how to pursue legal avenues regarding pollution control.
- 2) This Upper Trinity is our only water source here in Denton County - Texas I will oppose any type of activity that is an environmental threat to our drinking sources.
- 3) There are several historical places located in this area and adjacent to this area.

RESPECTFULLY,

Kris Hall
