RE: Sale of U.S. Army Corps of Engineers
near lake Lewisville, Texas

To Whom It May Concern:

I wish to log an objection to the possible sale of 259 acres of land located on the Hickory side of Lake Lewisville for the purpose of gas drilling activities. Lake Lewisville is the water source for a number of communities located close to the lake.

I understand if the government wants to sell the land for the purposes of raising funds to fill gaps in the federal budget. The long term affects of drilling close to our primary water source should be taken into consideration. Water is becoming a commodity and has an immeasurable value to the environment.

Are we to face a BP spillage field at some point? Are the local communities eventually to suffer the same results as the people in Michigan? We are not asking for any more consideration than if the shoe was on the other foot. Please take into account the final usage of the land after the sale.
