Re: April 20 Auction of property rights at Lewisville Lake, Lewisville, TX

To Whom It May Concern:

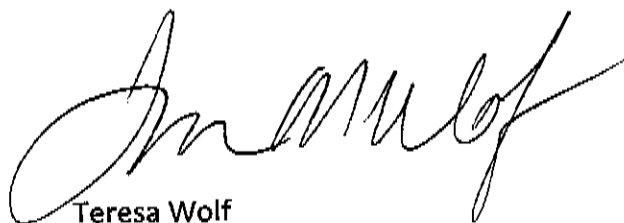

We are homeowners just downstream from Lewisville Lake. We must protest that the BLM is considering an auction of lease rights for UNDER Lewisville Lake. This seems a poor decision for several reasons:

1. The direct impacts of oil and gas activities have not been thoroughly studied and if there was an issue it impacts the water supply for literally millions of people. Our water authority, Dallas Water Utilities, is strongly opposed. We trust that their concern should be ours.
2. There has not been adequate environmental study done to account for the possible impact of "fracking" on what is an already unstable dam structure at the lake. This dam is in very poor condition and is at huge risk from natural conditions like last year's rains. To add the unknown effect of geological slippage is crazy. Our home is potentially in the inundation zone along with thousands of others.

Whether it is possible contamination of drinking water for millions or the unintended consequence to an already perilous dam structure, we don't see how the auction of these lease rights is prudent.

Please count our voices as OPPOSED to this lease auction.

Sincerely,

Teresa Wolf
