RE: Land auction, Lake Lewisville, Denton County, Texas

Granting fracking rights in this area will flood Dallas. The Lake Lewisville dam is on its last leg. Any seismic activity will break it. Estimates are that such an event will flood the majority of Dallas and all points between.

Lake Lewisville supplies drinking water to a large part of the Dallas-Fort Worth metroplex and should not be put at risk with fracking chemicals.

Sincerely,

Mark A. Arnold
