PO Box 27115
Santa Fe, New Mexico 87502

Dear Mr. Juen,

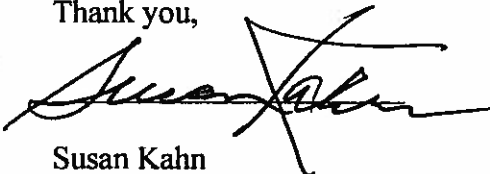

I am a Rio Arriba land owner, and as a land owner I am seriously concerned about the sale of BLM parcels 2014001, 004 through 015.

If these parcels are sold to oil speculators, we in N.M. Could be facing a big toxic hazard that might endanger our water resources. I am thinking mainly of the nearby Chama river, it supplies water for our agriculture as well as our cities.

From what I have read there is a glut of oil in the U.S so why the rush to hydraulic fracturing ? My greatest concern in the oil industries refusal to disclose the chemicals used to break down the shale to extract the oil. Benzene, Methane, Toluene, Naphthalene. B3, what ever that is, and god knows what else, have been detected in dangerously high volumes in areas where fracking is practiced. The deaths of live stock and the hospitalization of humans have also been reported.

Because of these issues I believe the sale of these parcels represents a serious environmental and health risk to my property, to our water resources, to our cities and to our state.

Thank you,
