

8/13/14

I protest the introduction of
any poisonous chemicals to underground
water systems; for the following reasons

① We are in a 10 year drought; any
chemicals will go directly into potable
water supply.

② No long term tests have been
conducted to see if accumulation of certain
chemicals will affect health

③ No studies have been conducted on the
effect chemicals will have on air quality
What about air pollution long term?

Signed

Gordon Selford
