

Downloading an Offline Area in Field Maps

Before heading into the field, you will need to download the relevant seed collection map so that you can view it when you are in the field, and out of cell service.

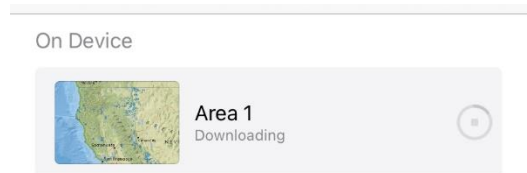

1. First, open Field Maps and find the map that corresponds with your SOS Group and year.
2. Click on the three dots in the top right corner of the map. Tap **Add offline area**.

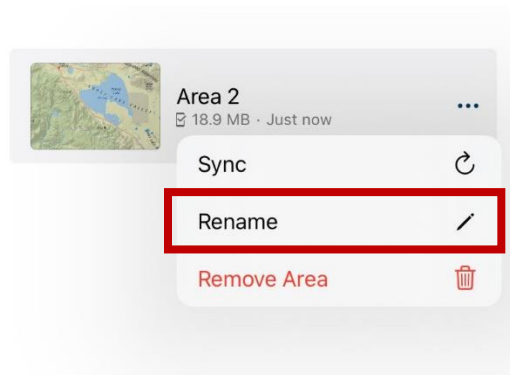

3. Then, pan and zoom the map so the area you want to download is visible. Adjust the level of detail to TOWN, then click **Download Area**. You can also choose a larger level of detail such as City if the download is too slow.

4. Your map will begin downloading. Maps may take a while to download, so make sure you budget enough time before leaving cell service. When the download is complete, open your map and make sure you can view all the available layers.

5. You can rename the map by clicking the three dots to the right of the map.

More information about downloading maps is available here:
