Subject: Notes from 2/27 Kirkland Meeting

This is what I captured:

EPG has been contracted to conduct all cultural and biological inventories. The area to be inventoried is approximately 160 acres. PDO created a GIS layer of the inventory area.

Westland Resources is currently being scoped to prepare the Plan of Operations and the Environmental Assessment, if that is what HFO determines as the appropriate level of NEPA.

Kirkland has submitted to the AZSO information for a Mineral Exam, in order to determine whether the project would fall under the 3600 or 3809 regulations.

The inventory area does not include the access road that is owned by Kirkland.

The project would load/screen and crush material (pozzolan). All other processing would be off-site. No use of chemicals would occur.

Kirkland will submit their Plan of Operations after the BLM makes its determination with regards to the Mineral Exam.
