[Official Workbook Economic Contributions of National Monuments and NCAs.xlsx](#)

Hi all,

Sorry for the slow response. I'm actually on travel, in Utah, and drove along Grand Staircase Escalante (GSENM) today! I'm available tomorrow (Thursday) at 10am. My recommendation would be to pull from that study I've shared with you all on the economic effects of National Conservation Lands. Let me know if you want me to resend. There is some good info on GSENM. Also take a look at the attached workbook (associated with that study). Bears Ears might be more challenging since it was just designated. I can look into trying to get visitation data for the unit.

Talk to you tomorrow.

Josh

PS Would you be available to talk for 30 minutes on Thursday at 10 am Mountain/Noon Eastern? Another option that we've got is to use BLM's data from the FY 2016 econ report, and develop a state-level coefficient potential resource production associated with each monument.

Hi Josh,

Our office is putting together some econ impact info on Bears Ears and Grand Staircase Escalante for an "interim report" on National Monuments, due next week. We're thinking of running IMPLAN for the regions made up of the counties surrounding each monument.

Would you have 30 minutes to discuss our approach today or tomorrow? How about 2:30 Eastern/12:30 Mountain (or later) today?

Please let me know what you think,  
Christian

The example program reads a  
 line of text from the user and  
 then displays it in reverse order.  
 The program uses the `strlen` function  
 to determine the length of the  
 string. It then uses a loop to  
 print the characters in reverse  
 order. The program also uses  
 the `printf` function to display  
 the string in its original order.  
 The program is as follows:

```

#include <stdio.h>
#include <string.h>

int main()
{
    char str[100];
    int len;

    printf("Enter a string: ");
    fgets(str, sizeof str, stdin);

    len = strlen(str);

    printf("String in reverse order: ");
    while (len > 0)
        printf("%c", str[len-1]);
    printf("\n");

    printf("String in original order: ");
    printf("%s", str);
    printf("\n");

    return 0;
}
    
```

**dispute** has an opposite if you like of  
**concord** and are also opposed  
 before some proceedings in which  
 one of two contraries is the one  
 a pair named that that which has  
 its members and others

A large, dense table with many columns and rows, containing a large amount of text data. The table is oriented vertically and appears to be a scan of a printed document. The text is too small to be legible, but the structure suggests a complex dataset or a list of records.

A large, dense, and mostly illegible table with many columns and rows of text. The text is too small and blurry to read, but it appears to be a structured list or data set with multiple columns and rows.

A large, dense, and mostly illegible table with many columns and rows of text. The text is too small and blurry to read accurately, but it appears to be a structured list or data set with multiple columns and rows.

[illegible]

[illegible]

Figure 1 illustrates a 16-bit parallel adder. The top section shows two 16-bit input vectors, 'a' and 'b', entering a block labeled '16-bit parallel adder'. The bottom section shows the resulting 16-bit output vector 's'. The diagram is divided into two main sections: the top section for 'a' and 'b' inputs, and the bottom section for the 's' output. The inputs are represented by horizontal lines with small circles at the ends, and the output is a single horizontal line with a small circle at the end.

Figure 1 shows a 1D lattice chain with 10 sites. The sites are labeled 1 through 10 from left to right. Each site is represented by a vertical bar. The first site (1) and the last site (10) contain a small circle. The sites are connected by horizontal lines. The chain is labeled "1D Lattice Chain" at the top.
