Hi Joel,

Below is the follow up Recreation ask that I mentioned in my email. I see now that the attachments are "examples." It appears all they're looking for is a Word or Excel table that can be placed in the folder.

After you've looked these over, let's talk about whether we already have what we need and just need to place it into a table, similar to your grazing tables.

I did notice several blanks in the recreation tables (some activities showing a single figure and I didn't know if it represented the total recr use or annual average). So maybe something has been left off of those.

Anyway, I'm following up on something else, but feel free to call me when you've had a chance to look at this.

Thanks.

PS to Kristi: I hope it's OK to be asking for more of Joel's help. I agree with you that he's done an excellent job on this extensive request. I don't know what I would've done last night if the information was confusing or not well written. I was happy to see such complete responses.

To:

As I review the information it seems we are missing a recreational use spreadsheet as a referral document in the data call.

Use numbers prior to designation and after are preferred, but not reasonable for the older monuments. The DOI will want several years and if there is a drastic change we need to identify why the change may have occurred if known (i.e. access road was closed for a year to rebuild a bridge... economic slump etc.).

I have attached a couple of examples..

Cell J3
Comment aginn
RMIS was implemented in 1999. In FY99 GSENM reported unusually high figures (1,089,135). GSENM's standalone visitor reporting figure appears to be more accurate.

Cell J4
Comment aginn
These figures are in RMIS, but please note that the overall report for FY99 in RMIS was unusually high.

Cell J5
Comment aginn
These figures are in RMIS, but please note that the overall report for FY99 in RMIS was unusually high.

Cell K5
Comment aginn
This is an outlier, possibly double counted between Kanab and Escalante.

Cell J6
Comment aginn
These figures are in RMIS, but please note that the overall report for FY99 in RMIS was unusually high.

Cell H6
Comment aginn
Due to the wide variance pre-2003, we wonder if the guidance for reporting "Gathering" changed.
