Hi Randy,

How about 9 AM EST Thursday? I am traveling home today.

For the issue you are having, that is one I need to see and walk through with you during a web meeting.

I was able to download all the new data from FDMS and upload it to DiscoverText. There are still several archives processing and when they are done I will run the deduplication and clustering.

Paris was great. I ate too much. Some of the food is quite good. It was definitely a productive trip. I am very impressed with my new European partners. We have never had a professional sales person in 7 years, so this could be great.

Stu, hope you had a good trip to Paris, and that not all of it was business. I have 3 things I'd like to talk to you about when you are back, and Marcia would like to be on as well.

First is how to export - I could not find any instructions in the system, tried entering "export bucket" and "export dataset" in the Help search box and got nothing. I need to

export comments on the marine monuments to NOAA. I have combined those comments in a bucket in the Bears Ears project, thinking that would be a good place to start. It was while I was there that I noticed the information below, comments on which in the earlier email are hopefully self-explanatory.

Lastly, when trying to clean up the small-item clusters in the near duplicates for the current June 28 project, I was trying to place many small clusters into a single bucket (or 2) and then a dataset to code them. but when I tried to move them into buckets could not get the name of the near duplicate bucket I had created to show - only duplicate bucket names and singles/uncoded singles, but no "nd opposed 1" or "4" bucket showed in the drop box. I even tried typing in the name, and instead of putting the items in that bucket it created a new one with the exact same name. And the one thing I overlooked from our discussion on coding the 149,000 form letters, the reason I was coding those was so I could combine the smaller items with the singles using the "all uncoded items" filter. We need to cod them at one end or the other so we know how many comments we received and whether they were for or against.

Thursday is best for Marcia if you are back then. At this point I have meetings 11:30 to 12 and 2-3, otherwise available.

Forgot to ask Friday if you are working today, but if not for Wednesday - I went into the Bears Ears project to start pulling together comments on the marine monuments for NOAA, and saw this (below) under "Project Details", which doesn't make any sense to me at all. I know the system said the coders had finished Bears Ears, and the results were 25,276 comments in form letters and 33,800 individual comments. Nothing below matches this, and there are 2 archives shown, while I thought we were working from one.

Project name: Bears Ears

Project Statistics

Archives: [2 archives](#)
Buckets: [19 buckets](#)
Datasets: [16 datasets](#)
Total Units: [176,627 units](#)
Unread Units: [170,617 units](#)
Codable Units: 34,225 units
Uncoded Units: [142,402 units](#)
