Here are the totals as they stand with the numbers that have been turned in so far

sorry, typo - should be "unc" - I checked the group numbers to be sure.

Also, Downey now wants to know how many are form letters. When you finish the overall count, would you mind going back through and totaling the dups and nds. so we have two numbers - total comments submitted and number of those that were form letters (near duplicates are still form letters). Thanks

Thank you. I was so focused on the issue I mentioned until after 1, and then on finishing my counts this afternoon that I didn't even notice you that attached the totals until now.

Here are the individual numbers from the other sets of comments. All multiplication, addition and subtraction was done on the calculator if the result would be higher than 30. Two documents, one from everything except June 13 and ones you did from July 20, and the other for June 13. I will recheck the input numbers in the morning, but thought I would give you a chance to look them over and then ask questions. I am emailing these in the thought you might

be able to cut and paste from the document to your spreadsheet rather than type them in.

Although I used them on the "worksheet" to keep myself organized, we do not need the multipliers going forward, just the count of opposed, supports and uncodable for each set of comments (i.e. each date) and then the overall totals.

Send me a note when you have gone over these and I'll come and answer any questions, also fill you in on the outcome of the other issue.
