Josh,

Creating a map of (b)(5) DPP (b)(5) ACP is possible, but is a complicated process and will take time and resources. Brian and I have discussed this with some of our lands and realty experts and estimate it will take someone 4-6 weeks.

Included below is a brief description of the process we would have to follow. I am just providing this information so that you understand that is very involved.

(b)(5) DPP (b)(5) ACP

Before we start this process it would be good to know the importance of this information and whether there are other options available.

We can generate a tabular report that includes (b)(5) DPP (b)(5) ACP. However this report would probably only be about 75 percent complete and it would not include a spatial component.

If you have questions call me or Brian.

Regards,

I think that information would be very helpful to us.

Thanks,

Josh
