All-

Please find attached Word versions of the Executive Summary and Data Responses for Bears Ears National Monument and the supporting documents. (Thank you, Tyler and others for doing such an amazing job!)

These are all located in the DOI's Google Drive folder, but only a few BLMers have access in Drive.

We are still waiting on some information from the 5th floor, the grazing program, and review by External Affairs.

Please bring any issues to our attention during the conference call tomorrow morning (UTSO folks can gather in Monument Room A).

Thanks!

Regards,

Allison Ginn
National Conservation Lands Program Lead

Executive Summary of Review of National Monuments under EO 13792 (April 26, 2017)

Key Information about Bears Ears National Monument

Bears Ears National Monument (BENM) consists of 1,351,849 acres in San Juan County, Utah, jointly managed by the BLM and the U.S. Forest Service (1.063 million acres managed by the BLM; 290,000 acres managed by the USFS). Located in southeast Utah's canyon country, Bears Ears National Monument offers unparalleled recreation opportunities. The area is one of the most significant cultural landscapes in the United States, with thousands of archaeological sites and important areas of spiritual significance to American Indian tribes.

Summary of Public Engagement Prior to Designation

The idea of a national monument in this area is not a new one: calls for protection of the Bears Ears area began more than 80 years ago. Six years ago, several tribes began working on a specific proposal to protect this area under the Antiquities Act. Last year, at the invitation of the tribes, senior representatives from DOI and the USFS attended an Inter-Tribal Council meeting in the field at the Bears Ears buttes to engage in government-to-government dialogue. In July of 2016, Secretary Jewell was joined at a public meeting in Bluff, Utah, by Department of Agriculture Under Secretary for Natural Resources and Environment Robert Bonnie, Principal Deputy Assistant Secretary for Indian Affairs Larry Roberts, BLM Director Neil Kornze, National Park Service Director Jon Jarvis, and staff from the offices of Governor Herbert, Congressman Chaffetz, Congressman Bishop, Senator Lee, and Senator Hatch. At the meeting, an overflow crowd of over 1,500 citizens came to share their views. The majority of speakers encouraged permanent protection for this iconic landscape, as did the majority of almost 600 written comments. On that trip, senior officials also met with a number of local stakeholders to discuss protection of the area, including a meeting with the San Juan County Commission that was well-attended by local citizens.

The boundary of BENM is largely congruent with similar designations in the Utah Public Lands Initiative (H.R. 5780), which was introduced by Reps. Bishop and Chaffetz after extensive consultations with stakeholders. Their Utah Public Lands Initiative, which Governor Herbert also supported, proposed to conserve roughly the same area as the Bears Ears National Monument by designating two new National Conservation Areas and Wilderness.

There is overwhelming support from tribal governments for protecting this important cultural landscape. A coalition of five federally recognized tribes – Hopi, Navajo, Ute Mountain Ute, Zuni, and Ute Indian Tribe of the Uinta Ouray – came together to develop a proposal for protecting 1.9 million acres of public land in the Bears Ears area, which is the ancestral grounds of numerous tribes in the region and remains an important area for traditional and ceremonial use. Over two dozen other tribes endorsed their proposal, as well as the National Congress of American Indians. The Ute Indian Tribe of the Uinta Ouray is located in Utah, and the Utah

Tribal Leaders Association endorsed the proposal. The Navajo Nation, which has seven chapter houses located in Utah, has supported the proposal at its highest levels, including support from its President and the Navajo Nation Council. Six of their seven chapter houses in Utah support the monument proposal, and the one that has rescinded its support has instead advocated for protecting the area through the Public Lands Initiative. To reflect tribal expertise and traditional and historical knowledge, the monument proclamation established a Bears Ears Commission, which enable tribes to share information and advice with federal land managers.

Summary of National Monument Activities since Designation

The BLM-Utah Monticello Field Office has identified a list of priority projects needed to improve visitor safety, protect resources, and enhance visitor experiences and have made significant progress in planning and implementation of these projects. The BLM-Utah has also developed informational materials including maps, brochures, and website materials. Design work for portal signs is also nearly complete. The Bears Ears Tribal Commission has been established, with representatives identified for each of the tribes noted in the Proclamation. The BLM has participated in two in-person meetings with the Commission and have started to opportunities to work together. The BLM has coordinated with the Forest Service on day-to-day activities and initiated discussions regarding short- and long-term management needs. A coordination call is held between the agencies on a weekly basis to discuss ongoing action items, including responses to public inquiries. The BLM prepared a Monument Advisory Committee Charter (signed by Secretary Jewell) and a Federal Register Notice calling for nominations to the Monument Advisory Committee (not yet published). See BENM WO 410 Checklist and Supporting Docs subfolder for additional information.

Summary of Activities in Area for 5 years Preceding Pre-Designation

These lands have been managed according the 2008 Monticello Resource Management Plan, which includes multiple-use management objectives. Approximately 727,000 acres (68%) of the BLM lands that are within the monument are afforded a level of protection under the existing land use plan under other designations such as Wilderness Study Areas, Natural Areas, Areas of Critical Environmental Concern, or Special Recreation Management Areas. There has been no change in day-to-day management since designation of the National Monument.

Summary of Available Economic Information since Designation

A cursory review of mineral potential is included in the Drive folder.

Summary of Any Boundary Adjustments since Designation

Not applicable. The Proclamation establishing the Bears Ears National Monument (BENM) directed the Secretary to explore entering into a Memorandum of Understanding (MOU) with the State of Utah for the exchange of approximately 109,000 acres of State inholdings within BENM for BLM lands outside the monument. Further, the Secretary was ordered to report to the

President by January 19, 2017 regarding the potential for the exchange. In response, the BLM drafted an MOU for review by SITLA. SITLA has currently declined to participate in review of the MOU.

INFORMATION MEMO

TITLE: Cursory Review of the Mineral Potential/Occurrence within the Bears Ears NM
AUTHOR: Larry Garahana, Geologist (Certified Mineral Examiner 0147)
DATE: January 31, 2017

INTRODUCTION

The information within this memo gives an initial view through a series of maps showing mineral potential and occurrence within the newly designated Bears Ears National Monument, located within the Canyon Country District, Monticello Field Office, in San Juan County, Utah.

MEMO INFORMATION

The maps that were created for this memo are ones that show past or present mineral history, mineral potential or minerals that may be prospectively valuable within and around the new designation.

Some of the attached maps include information taken from the USGS Mineral Resource Data System (MRDS). MRDS describes metallic and nonmetallic mineral resources throughout the world. Included in the MRDS are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. Their interactive map (<https://mrdata.usgs.gov/mineral-resources/mrds-us.html>) has information on more than 180 commodities and this memo depicts a static representation of those commodities, past and present near and within the new designation. Although there was no prospect or production information near or within the monument for lithium, a lithium map was included for informational purposes due to the thousands of newly staked unpatented mining claims that were located north northeast of the monument. The information on the remaining maps was gathered from the most current BLM GIS data and it depicts potential and prospectively valuable mineral information on specific solid, fluid and leasable minerals within the subject area.

Illustration 3
(.34)

3031 - ENERGY AND MINERAL RESOURCE ASSESSMENT

Mineral Potential Classification System*

I. Level of Potential

- O. The geologic environment, the inferred geologic processes, and the lack of mineral occurrences do not indicate potential for accumulation of mineral resources.
- L. The geologic environment and the inferred geologic processes indicate low potential for accumulation of mineral resources.
- M. The geologic environment, the inferred geologic processes, and the reported mineral occurrences or valid geochemical/geophysical anomaly indicate moderate potential for accumulation of mineral resources.
- H. The geologic environment, the inferred geologic processes, the reported mineral occurrences and/or valid geochemical/geophysical anomaly, and the known mines or deposits indicate high potential for accumulation of mineral resources. The "known mines and deposits" do not have to be within the area that is being classified, but have to be within the same type of geologic environment.
- ND. Mineral(s) potential not determined due to lack of useful data. This notation does not require a level-of-certainty qualifier.

II. Level of Certainty

- A. The available data are insufficient and/or cannot be considered as direct or indirect evidence to support or refute the possible existence of mineral resources within the respective area.
- B. The available data provide indirect evidence to support or refute the possible existence of mineral resources.
- C. The available data provide direct evidence but are quantitatively minimal to support or refute the possible existence of mineral resources.
- D. The available data provide abundant direct and indirect evidence to support or refute the possible existence of mineral resources.

For the determination of No Potential use O/D. This class shall be seldom used, and when used it should be for a specific commodity only. For example, if the available data show that the surface and subsurface types of rock in the respective area is batholithic (igneous intrusive), one can conclude, with reasonable certainty, that the area does not have potential for coal.

* As used in this classification, potential refers to potential for the presence (occurrence) of a concentration of one or more energy and/or mineral resources. It does not refer to or imply potential for development and/or extraction of the mineral resource(s). It does not imply that the potential concentration is or may be economic, that is, ~~could~~ be extracted profitably.

Energy Development in Bears Ears National Monument & San Juan County

Call for Data Related to Review of National Monuments under EO 13792 (April 26, 2017)

1. Documents Requested

a. Resource Management Plans/Land Use Plans

- Bears Ears National Monument (BENM) has not yet initiated a Monument Management Plan (MMP). The 2008 Monticello RMP will be followed in the interim. The entire Monticello RMP (DEIS/FEIS/ROD) can be accessed here: <https://eplanning.blm.gov/epl front office/eplanning/planAndProjectSite.do?methodName=renderDefaultPlanOrProjectSite&projectId=68097&dctmId=0b0003e880befb7c>. A copy of the 5 year RMP Evaluation is also in this folder (1.a.Monticello RMP Evaluation September 2015.pdf).

b. Record of Decision

- BENM has not yet initiated a Monument Management Plan. The 2008 Monticello RMP will be followed in the interim. The ROD is in this folder (1.b.Monticello Final Plan ROD.pdf) and can be accessed here: <https://eplanning.blm.gov/epl front office/projects/lup/68097/85493/102694/Monticello Final Plan.pdf>

c. Public Scoping Documents

- Public scoping has not yet been initiated for a BENM MMP. The first public comment period post designation associated with BENM is the DOI Notice of Opportunity for Public Comment.

d. Presidential Proclamation

- Proclamation 9558 of December 28, 2016 is in this folder (1.d.Bears Ears Presidential Proclamation.pdf)

2. Information on activities permitted at the Monument, including annual levels of activity from the date of designation to the present (Designation date for BENM is December 28, 2016- information is not yet available for most of FY17)

a. Recreation annual visits to site

- BLM uses the Recreation Management Information System (RMIS) to report visitor use. Full reporting for annual visitation 2017 will not be available until the end of September.
- While specific visitation information to the BENM is not available at this time. What we do know is:
 - Requests for overnight reservations in the Cedar Mesa area and day use permits for the Moonhouse area, which are both popular recreation spots within the BENM, have increased since

monument designation.

- Campgrounds in the Moab and Monticello Field Offices have remained full through much of this spring season, even on non weekend days, and the number of overnight visitors is higher compared to this same time last year.

b. Energy annual production of coal, oil, gas and renewables (if any) on site; amount of energy transmission infrastructure on site (if any)

- There are no producing oil and gas wells and no coal developments in BENM. While no new energy production will be permitted, valid existing rights were protected under the Proclamation. Since 1920, 250 wells have been drilled in the BENM. The last wells were drilled in 1993. Of the 250 wells drilled, 3 wells have produced economical quantities of oil and gas. The last producing well was drilled in 1984.

Commented [3]: (b) (5) - DPP

c. Minerals annual mineral production on site

- There are no active mining operations in the BENM. There is one commercial mineral materials site. While no new mineral production will be permitted, valid existing rights were protected under the Proclamation. Due to the short timeframe since designation (5 months), it is not possible to calculate the annual mineral production since designation.

d. Timber annual timber production on site (in board feet, CCF, or similar measure)

- Timber production in the BENM is limited to non commercial Christmas tree cutting permits, and permits for the collection of wood products (i.e., posts and firewood). Due to the short timeframe since designation (5 months), it is not possible to calculate the annual timber production since designation. Collection of forest products, and firewood for personal noncommercial use is allowed under the monument proclamation.

e. Grazing annual grazing on site (AUMs permitted and sold)

- There are 20 allotments that wholly or partially contained within BENM. These allotments include 50,469 permitted AUMs. Allotment boundaries do not coincide with the BENM boundary, and therefore it is not possible to calculate the number of AUMs currently permitted within the monument boundary. Due to the short timeframe since designation (5 months), it is not possible to calculate the annual AUMs sold.

f. Subsistence participation rates for subsistence activities occurring on site (fishing,

hunting, gathering); quantities harvested; other quantifiable information where available

- Subsistence activities are those that provide the bare essentials for living: food, water, and shelter. The Federal Subsistence Management Program provides opportunities for subsistence way of life in Alaska on federal public lands and waters. There are no formal subsistence programs outside of Alaska. BENM does provide for the collection of certain natural materials, including firewood by Native American Indians, under BLM permit. Information regarding firewood collection is included under the discussion of timber production.
- RMIS data provides the number of permitted/guided and recreational hunting activities and fishing activities (BENM 5YearRecreationData). These numbers do not reflect the actual number of licensed hunters/fishermen. That data is available from Utah Division of Wildlife Resources. The entire BENM is open for hunting and fishing, which is regulated by Utah Department of Wildlife Resources.

g. Cultural list of cultural uses/values for site; number of sites; other quantifiable information where available

- The BENM was designated at the request of the Bears Ears Inter Tribal Coalition. The Inter Tribal Coalition, which includes the Hopi, Zuni Tribe, Navajo Nation, Ute Mountain Ute, and Northern Ute, have stated that the entire 1.35 million acre National Monument includes important cultural values. The importance of these values, which was recognized in the monument proclamation, are discussed in the Inter Tribal Coalitions monument proposal, which was submitted to the department on October 15, 2015. The Cultural values of the area are also explained in the proclamation.
- Tribes use the BENM for ceremonies and to visit sacred sites. Traditions of hunting, fishing, gathering, and wood cutting are still practiced by tribal members, as is collection of medicinal and ceremonial plants, edible herbs, and materials for crafting items like baskets and footwear. The BLM issues free use permits for collection of materials for ceremonial purposes.
- According to the Utah State Historic Preservation Office, as of February 6, 2017 there are 8,480 recorded archaeological sites and four archaeological districts within BENM. More than 70 percent of these sites are prehistoric (pre dating the 1800s). These prehistoric sites include

pottery and stone tool (lithic) scatters, the remains of cooking features (hearths), storage features such as adobe granaries and subsurface stone lined granaries, prehistoric roads, petroglyphs, pictographs and cliff dwellings. Historic sites include historic debris scatters, roads, fences, uranium and vanadium mines from World War II and the Cold War.

- BLM has not completely surveyed the Monument. The total percentage of cultural resource surveys for the BENM is 9.2%.

3. Information on activities occurring during the 5 years prior to designation

a. Recreation annual visits to site

- BLM uses the Recreation Management Information System (RMIS) to report visitor use. BENM is a subset of the Monticello Field Office. RMIS data for the MtFO is included in the folder (2.a.RMISData SelectInfo 2012 2016.pdf).

b. Energy annual production of coal, oil, gas and renewables (if any) on site; amount of energy transmission infrastructure on site (if any)

- There was no energy production from coal, oil, gas, or renewables during the 5 years prior to designation (2012 2016). The last producing oil and gas well was drilled in 1984.

c. Minerals annual mineral production on site

- During the 5 years prior to designation, mineral production was limited to one mineral material site. Production information for the site can be found in the Drive folder (3.c.Mineral Production 2012 2016).

d. Timber annual timber production on site (in board feet, CCF, or similar measure)

- During the 5 years prior to designation, timber production in the BENM was limited to non commercial Christmas tree permits, and permits for the collection of wood products (i.e., posts and firewood). Production information for the site can be found the folder (3.d.Timber Production 2012 2016). Information provided is for the entire field office and is not limited to the area that now part of the BENM.

e. Grazing annual grazing on site (AUMs permitted and sold)

- There are 20 allotments that wholly or partially contained within BENM. These allotments include 50,469 permitted AUMs. Allotment boundaries do not coincide with the BENM boundary, and therefore it is not possible to calculate the number of AUMs currently permitted within the monument boundary. AUMs sold during the past five years is included in folder (3.e.AUMS Sold 2012 2016).

Commented [4]: Still waiting for these numbers.

Commented [5]: Waiting for these numbers.

- f. Subsistence participation rates for subsistence activities occurring on site (fishing, hunting, gathering); quantities harvested; other quantifiable information where available
 - As previously mentioned, subsistence activities are those that provide the bare essentials for living: food, water, and shelter. The Federal Subsistence Management Program provides opportunities for subsistence way of life in Alaska on federal public lands and waters. There are no formal subsistence programs outside of Alaska. BENM does provide for the collection of certain natural materials, including firewood by Native American Indians, under BLM permit.
- g. Cultural list of cultural uses/values for site; number of sites; other quantifiable information where available
 - See response to 2.g.

4. Information on activities that likely would have occurred annually from the date of designation to the present **if the Monument had not been designated**

5. Changes to boundaries dates and changes in size

- There have been no changes to boundaries.

6. Public Outreach prior to Designation outreach activities conducted and opportunities for public comment

- The public process preceding BENM designation is outlined in 6.Bears Ears Fact Facts QA.pdf (released with the DOI/USDA joint press release on 12/28/16) in this folder. Secretary Jewell held a public meeting in Bluff, Utah in July 2016. [https://www.doi.gov/pressreleases/secretary jewell under secretary bonnie join utah local leaders public meeting hear](https://www.doi.gov/pressreleases/secretary%20jewell%20under%20secretary%20bonnie%20join%20utah%20local%20leaders%20public%20meeting%20hear)

7. Terms of Designation

- Refer to Proclamation for the terms of designation. No additional background (e.g., legislated land exchanges or Congressional budget provisions, etc.)
