Subject: Re: Lets finish the current round of comments
Date: Thursday, July 27, 2017 1:34:10 PM

Please disregard my email. My mistake in reading the data.

Hi Randy - Could you give me the name of the dataset? I don't see one with 3200 left - only the newest one, Bear's Ears, that has 18,000 left to code. Perhaps I didn't get the previous coding request? I have time today and tomorrow to code, so just let me know which to work on.

There are still approximately 3200 comments left to code in the current project. I urge anyone who has time today and tomorrow to work on these, so we can go to the final round with a clean slate.

Uploading the last set of comments from [regulations.gov](#) to discovertext has suffered from some of the same problems that afflicted [regs.gov](#), in that a very large number of attachments, many with hand-written postcards, has taken enormous amounts of computer processing time and slowed things down far beyond what was expected. We should be able to start with these early next week.

Dr. Shulman's graduate students are reviewing the previous comments with attachments, transferring numbers of comments from those that have comments in the attachments to a spreadsheet, so none of you will need to address such attachments in reviewing future comments. If you encounter any in the current coding, either code the base comment if it is readily visible, or mark it as "uncodable", since the grad students will review it.

I will be on leave dealing with a family matter and unable to check emails until mid-afternoon Monday. If you have any questions before then, please contact Marcia Cash.
