First 2 documents I tried opened as they should, so presume rest will - thank you for the quick fix!

Randall -

I pushed up the new patch for the DOI website - it looks like it is working again. Give it a try and let me know.

(Stu - I'll update the other sites tonight)

No worries - the upgrade will take but a few minutes.

Stu - good to go?

I logged out when you started so as not to inadvertently cause more problems, so whatever works best is fine with me. I would like to be able to access comments this afternoon but its not essential.

Hi all -

I believe I found the root of the issue (it looks like it was caused by a side effect from some changes yesterday) - I have a patch ready to go, however, it will reset

I have checked the other projects, same problem throughout - after searching for "new information" (where there are comments so coded) the first comment on the list will open as it should, but all of the subsequent ones in the search results when you attempt to open them go to what appears to be a list, by document number only, of all of the items in that dataset - not just the search results. Without the search, there is no problem opening documents. Mark, I will forward my original email so you have more information.

<http://doi.discovertext.com/dataset/details/000000004000000000000000000000007300000000000000000>

We are having lots of problems filtering for "New Information" in this dataset. It seems to work, but when you try to view the 2nd document, something strange happens (a list?).

Can you help?
