Thank you. Without counting myself, since I did almost all those in bunches, and Brendan Quinn did many in my name, there is as I had hoped a natural cut-off at 4 people above 3,000 coded.

Is it possible to get an overall coding report as far as how many comments each of the DOI coders did, or do we need to open each dataset individually for that?

In addition to overall recognition for everyone involved, I would like to have commendations for those who made special contributions. In addition to you, Jennifer and Julie, I would like to recognize the people who coded the most comments. I presume there is a natural cut-off once you look at it, with a few people doing many more than everyone else, but I'm not sure if going to every dataset is worth the trouble.
