You already had access, same level as Randy. You do not, however, get automatic access to datasets within a project. Agencies requested a more granular model. If Randy creates a dataset inside a project, he has to give you access to that particular dataset.

The general idea is to allow collaboration but to assume privacy.

I'm trying to help Randy figure out why he can't see whole datasets. But, even though I'm a peer, I'm not assigned to any datasets.

Is there a way he can share admin rights with me so I can see the things he asks me about?

I have created bucket and dataset, but can't find a way to display the entire dataset, or even multiple items (i.e. 1000) per page - it only lets me code one at a time. What am I missing?
