<b>Table No.</b>	<b>Title</b>
<b>Section II</b>	
II-01	Land Management Designations
II-02	Stipulations and Required Operating Procedures (ROP's)
II-03	Stipulations and Required Operating Procedures for the Preferred Alternative
<b>Section III</b>	
III-01	Discovered Fields, New Discovery Wells, and New Fields in and Adjacent to NPR-A
III-02	Potential Hazardous Materials Sites and Abandoned Oil and Gas Exploration Wells in NW NPR-A
III-03	Onshore Climate of Alaska's North Slope
III-04	Ambient Air Quality Standards for North Slope Alaska
III-05	Measured Air Pollutant Concentrations at Prudhoe Bay, Alaska (1986-1996)
III-06	NW NPR-A Land Cover Classifications
III-07	Occurrence and Representative Abundance and Density of Selected Birds in NW NPR-A
III-08	Chronology of Activities for Selected Birds Nesting on the Arctic Coastal Plain in NW NPR-A
III-09	Breeding Status and Population of Shorebirds in NW NPR-A
III-10	Southcentral Alaska and Fairbanks Employment Estimates (1995-2000)
III-11	North Slope Borough Area Employment by Industry for Years 1990-19982 (Nonagricultural Wage and Salary Employment)
III-12	North Slope Borough Employment by Employer and by Community
III-13	1998 NSB Employment by Employer and Employee Ethnicity
III-14	1998 North Slope Labor Force by Community
III-15	1998 North Slope Borough Unemployment and Underemployment by Community
III-16	1998 Annual Household Subsistence Expenditure by Ethnicity in the North Slope Borough
III-17	Percentages of Edible Pounds of Subsistence Resources for Point Lay, Wainwright, Barrow, Atqasuk, and Nuiqsut
III-18	North Slope Subsistence Resources by Common Name, Inupiat Name, and Scientific Name
III-19	Proportion of Inupiat Household Food Obtained from Subsistence
III-20	Participation in Successful Resource Harvests by Percentage of Households in Barrow and Nuiqsut
III-21	1992 Point Lay Subsistence Harvest Participation Rates and Resources
III-22	1989 Wainwright Subsistence Harvest Summary
III-23	Annual Beluga Whale Harvest for Point Lay, Wainwright, and Barrow (1980-2001)
III-24	1987 Point Lay Subsistence-Harvest Summary
III-25	Annual Walrus Harvest for Point Lay, Wainwright, and Barrow (1982 to 2001)
III-26	Annual Polar Bear Harvest for Point Lay, Wainwright, Barrow, and Nuiqsut (1983 to 2001)
III-27	Annual Bowhead Whale Subsistence Harvest for Wainwright, Barrow, and Nuiqsut (1982-2001)
III-28	Species Harvested by Barrow Residents (1987-1990)
III-29	1989 Barrow Subsistence-Harvest Summary
III-30	1988 Atqasuk Subsistence Participation Levels by Household
III-31	Atqasuk Subsistence Harvest by Month (July 1, 1994 to June 30, 1995)
III-32	1993 Nuiqsut Subsistence-Harvest Summary
III-33	Nuiqsut Subsistence Harvest by Month (July 1, 1994 to June 30, 1995)
III-34	Status of Entitlements for Atqasuk, Barrow, and Wainwright
III-35	NW NPR-A Wilderness Units and Acreage
III-36	Scenic Quality Ratings for NW NPR-A
III-37	Land Use Sensitivity Levels for NW NPR-A
III-38	Rivers in NW NPR-A Eligible for Designation as Wild and Scenic

- III-39 Economic Oil and Gas Resources in NPR-A: Undiscovered, Risked, Economically Recoverable Resources  
 III-40 Field Survey Data for Rivers in NW NPR-A

#### Section IV

- IV-01 Projected North Slope Oil Production and World Crude Oil Prices  
 IV-02 Exploration and Hypothetical Development Schedule for the First Commercial Oil Project in Northwest NPR-A  
 IV-03 Development Timeframe for a Typical Oil Field  
 IV-04 Resource Estimates for First Sale under each Alternative  
 IV-05 Activities for the First Sale under each Alternative (at Low and High per/bbl Prices)  
 IV-06 Resource Estimates for all Sales under each Alternative  
 IV-07 Activities for All Sales under each Alternative (at Low and High per/bbl Prices)  
 IV-08 Past Development: 2001 Production and Reserve Data  
 IV-09 Past Development: Infrastructure and Facilities  
 IV-10 Present Fields: Estimated Reserve Data  
 IV-11 Present Fields: Proposed Infrastructure  
 IV-12 Reasonably Foreseeable Future Development: Estimated Resources  
 IV-13 Reasonably Foreseeable Future Development: Estimated New Infrastructure  
 IV-14 North Slope Oil and Gas Production (1969 to December 2001)  
 IV-15 Summary of Reserve and Resource Estimates Used in the Cumulative Analysis  
 IV-16 Production, Reserves, and Resource Estimates Used in the Cumulative Analysis  
 IV-17 Oil Spill Scenario Assumptions for Alternative A, Alternative B, and the Preferred Alternative  
 IV-18 Estimates for Speculative Oil and Gas Resources  
 IV-19 Large ( $\geq 500$  barrels) Crude Oil Spills for Life of the Northwest NPR-A  
 IV-20 Small ( $< 500$  barrels) Crude/Refined Oil Spills for Life of Northwest NPR-A  
 IV-21 Effects of Alternative A on Employment and Personal Income by Place of Residence with Oil at \$18/bbl  
 IV-22 Effects of Alternative A on Employment and Personal Income by Place of Residence with Oil at \$30/bbl  
 IV-23 Impacts of Oil Spills on Types of Vegetation  
 IV-24 Pipelines — Trans-Alaska Pipeline System and Future Natural Gas Pipeline Projects  
 IV-25 Future Lease Sales  
 IV-26 Discharge Conditions for a Well Blowout  
 IV-27 Results of Colville Delta Exploration Wells  
 IV-28 Summary of Selected Non-Oil and Gas-Related Management Activities  
 IV-29 Pipeline Scenarios for Alternative A, Alternative B, and the Preferred Alternative  
 IV-30 Effects of Preferred Alternative on Employment and Personal Income by Place of Residence with Oil at \$18/bbl  
 IV-31 Effects of Preferred Alternative on Employment and Personal Income by Place of Residence with Oil at \$30/bbl

#### Section V

- V-01 Protective Allocations for Rivers Eligible but not Suitable for Designation as Components of the National Wild and Scenic River System

#### Appendix 7

- App 7-01 Undiscovered, Risked, Conventionally Recoverable Oil and Gas Resources for Northwest and Northeast NPR-A Planning Areas (2002)  
 App 7-02 Economic Oil and Gas Resources in NPR-A: Undiscovered, Risked, Economically Recoverable Resources

**Appendix 9**

- App 9-01 North Slope Facility and Pipeline Crude Oil Spills  $\geq$  500 Barrels (1985-2000)
- App 9-02 Trans-Alaska Pipeline Spills  $\geq$  500 Barrels Based on Reported High Quantity from June 1977 to December 2001
- App 9-03 TAPS Tanker Spills  $\geq$  1,000 bbl (1977 through 1999)
- App 9-04 Alaska North Slope Historic Large and Small Crude Oil Spills: Estimated Spill Rates
- App 9-05 Large Crude Oil Spills Estimated Over the Production Life of the Northwest NPR-A
- App 9-06 Small Crude Oil Spills Estimated Over the Production Life of the Northwest NPR-A
- App 9-07 Small Crude-Oil Spills: Assumed Size Distribution during Producing Life of the Northwest NPR-A for First Sale and Multiple Sales
- App 9-08 Small Refined-Oil Spills: Estimated Spill Rate for the Alaska North Slope (1989-2000)
- App 9-09 Small Refined-Oil Spills  $<$ 500 bbl Estimated Over the Production Life of Northwest NPR-A: by Alternative
- App 9-10 Fate and Behavior of a Hypothetical 500-bbl Oil Spill from Lagoon Pipelines in Alternative A, Alternative B, and the Preferred Alternative
- App 9-11 Fate and Behavior of a Hypothetical 900-bbl Oil Spill from Lagoon Facility in Alternative A, Alternative B, and the Preferred Alternative
- App 9-12 Oil Spill Rates and Spill-Size Categories used to Estimate Large Crude Oil Spills for the Cumulative Analysis
- App 9-13 Resources and Reserves used to Estimate Large Crude Oil Spills for the Cumulative Analysis
- App 9-14 Cumulative Oil-Spill-Occurrence Estimates  $\geq$ 500 bbl and  $\geq$ 1,000 bbl over Assumed 15-20 Year Production Life of Northwest NPR-A
- App 9-15 Estimated Number of Trans-Alaska Pipeline System Tanker Spills, Assumed Sizes and Estimated Volumes

**Table II-01  
Land Management Designations:  
Potential Wilderness/Special Areas and Wild and Scenic Rivers**

					<b>Preferred Alternative</b>
<b>Potential Wilderness Study Area (WSA) or Special Area Designation</b>	No WSA or Special Area designations proposed	No WSA or Special Area designations proposed	Kasegaluk Lagoon area proposed for Special Area designation	Kasegaluk Lagoon, Foothills, and Mountain areas proposed for WSA designation	Kasegaluk Lagoon area proposed for Special Area designation
<b>Wild and Scenic Rivers (WSR)</b>	No WSR's recommended	No WSR's recommended	No WSR's recommended	Colville River recommended for wild WSR designation;  21 streams recommended for scenic WSR designation:  Alataktok, Alaktak, Avak, Avalik, Chipp, Inaru, Ivisaruk, Kaolak, Ketik, Kigalik, Kuk, Kungok, Meade, Nokotlek, Ongorakvik, Oumalik, Titaluk, Topagoruk, and Tunalik, Usuktuk Rivers, and Maybe Creek	No WSR's recommended

**Note:**

Portions of the existing Teshekpuk Lake and Colville River Special Areas are in the Planning Area. Their designations are not altered in any alternative.

WSA = Wilderness Study Area.

WSR = Wild and Scenic Rivers.

**Table II-01  
Land Management Designations (continued)  
Visual Resource Management**

					<b>Preferred Alternative</b>
<i>Visual Resource Management (VRM) Designations (See Maps 21-24 for depictions of VRM units for Alternatives A through C)</i>	None	For an area up to ½ mile from rivers and estuarine areas:  <u>VRM II</u> : Colville River  <u>VRM III</u> : estuarine and 21 rivers*  <u>VRM IV</u> : rest of Planning Area	For an area up to 1 mile from rivers and estuarine areas:  <u>VRM II</u> : Avak, Colville, Nokotkek, Ongoravik, and Tunalik Rivers, estuarine area, and Kasegaluk Lagoon Special Area  <u>VRM III</u> : 17 Rivers*  <u>VRM III-IV</u> : rest of Planning Area	For an area up to 5 miles from rivers and estuarine areas:  <u>VRM I</u> : Colville River; and the 3 proposed wilderness areas  <u>VRM II</u> : other WSR corridors and estuarine area  <u>VRM III</u> : rest of Planning Area	For an area up to 3 miles from rivers and estuarine areas:  <u>VRM I</u> : Colville River  <u>VRM III</u> : estuarine and 21 rivers*  <u>VRM IV</u> : rest of Planning Area

**Notes:**

Visual Resource Management classes are described in Appendix 3. The extent of VRM objective classes from the rivers and estuarine areas would be less than the above distances where land features limit the viewshed.

**VRM** = Visual Resource Management.

\*Rivers are those recommended for scenic WSR status under Alternative C but not recommended for scenic status under Alternative B.

**Table II-01  
Land Management Designations (continued)  
Travel Management**

					<b>Preferred Alternative</b>
<b>1. Off Highway Vehicle (OHV) Designations</b>	The Planning Area would remain Undesignated.	Designated Open to all OHV use throughout the Planning Area.	Designated Limited: a. winter use by snowmachines and other low-ground-pressure vehicles; and	Designated Limited: a. winter use by snowmachines and other low-ground-pressure vehicles (closed to summer use); and	Designated Limited: a. winter use by snowmachines and other low-ground-pressure vehicles; and
			b. summer use of OHV's with ground pressure ≤ 2.2 psi on designated trails only (none in the Kasegaluk Lagoon Special Area).	b. no summer recreational use of motorized vehicles.	b. no summer recreational use of motorized vehicles.
<b>2. Subsistence and Authorized Uses</b>	No restrictions on subsistence use; specific authorizations may stipulate use.	No restrictions on subsistence use; specific authorizations may stipulate use.	Airboat use in summer would be limited to streams, lakes, and estuaries that are seasonally accessible by motorboats; airboat use would be prohibited in seasonally flooded tundra and shallow waters with vegetation adjacent to streams, lakes, and estuaries. Specific authorizations may further stipulate use of airboats and OHV's.	Airboat use in summer would be limited to streams, lakes, and estuaries that are seasonally accessible by motorboats; airboat use would be prohibited in seasonally flooded tundra and shallow waters with wetland vegetation adjacent to streams, lakes, and estuaries. Specific authorizations may further stipulate use of airboats and OHV's.	Airboat use in summer would be limited to streams, lakes, and estuaries that are seasonally accessible by motorboats; airboat use would be prohibited in seasonally flooded tundra and shallow waters with wetland vegetation adjacent to streams, lakes, and estuaries. Specific authorizations may further stipulate use of airboats and OHV's.

**Note:**

With the exception of airboats, the above restrictions do not apply to boats.

OHV = Off Highway Vehicle(s)

**Table II-01**  
**Land Management Designations** (continued)  
**Lands Available for Oil and Gas Leasing; Fire Management**

					<b>Preferred Alternative</b>
<b>Lands Available for Oil &amp; Gas (O&amp;G) Leasing</b>	None	All federal oil and gas resources in the Planning Area:  100% of BLM subsurface;  100% of high oil and gas potential BLM subsurface.	All federal oil and gas resources in the Planning Area except the Kasegaluk Lagoon Special Area:  96% of BLM subsurface;  100% of high oil and gas potential BLM subsurface.	All federal oil and gas resources in the Planning Area, except in areas associated with important surface resources or under non-federal surface lands:  47% of BLM subsurface  <2% of high oil and gas potential BLM subsurface.	All federal oil and gas resources in the Planning Area:  100% of BLM subsurface;  100% of high oil and gas potential BLM subsurface.  Leasing would be deferred for 10 years on the 17% of lands that are located in the western part of the Planning Area.
<b>Fire Management (See Appendix 6 for Fire Management Constraints)</b>	None	No constraints. BLM may use management-ignited fires to improve vegetation conditions for specific resources.	No constraints. BLM may use management-ignited fires to improve vegetation conditions for specific resources.	No constraints. BLM may use management-ignited fires to improve vegetation conditions for specific resources.	No constraints. BLM may use management-ignited fires to improve vegetation conditions for specific resources.

**Note:**  
**O&G** = Oil and Gas

**Table II-02  
Stipulations and Required Operating Procedures (ROP's)**

				<b>Preferred Alternative (Table II-03)</b>
<b>A. Waste Prevention, Handling, and Disposal and Spills</b>	<p><b>Stipulation A-1.</b> For oil- and gas-related activities, a Hazardous-Materials Emergency-Contingency Plan shall be prepared and implemented before transportation, storage, or use of fuel. The plan shall include a set of procedures to ensure prompt response, notification, and cleanup in the event of a hazardous substance spill or threat of a release. Sufficient oil-spill-cleanup materials (absorbents, containment devices, etc.) shall be stored at all fueling points and vehicle-maintenance areas and shall be carried by field crews on all overland moves, seismic work trains, and similar overland moves by heavy equipment. Procedures applicable to fuel handling (associated with transportation vehicles) may consist of Best Management Practices if approved by the AO. The plan shall include a list of resources available for response (e.g., heavy-equipment operators, spill-cleanup materials or companies), and names and phone numbers of Federal, State, and NSB contacts. Other Federal and State regulations may apply and require additional planning requirements. All staff shall be instructed regarding these procedures.</p>			<p><b>A-3</b></p> <p><b>A-4(a)</b></p>
	<p><b>Stipulation A-2.</b> Except during overland moves and seismic operations, fuel, other petroleum products, and other liquid chemicals designated by the AO, whether in excess of 660 gallons in a single tank or in excess of 1,320 gallons in multiple containers, shall be stored within an impermeable lined and diked area capable of containing 110 percent of the stored volume. The liner material shall be compatible with the stored product and capable of remaining impermeable during typical weather extremes expected throughout the storage period. Permanent fueling stations shall be lined or have impermeable protection to prevent fuel migration to the environment from overfills and spills. The storage area shall be located at least 100 ft from the active flood plain of any non-fish bearing waterbody and 500 ft from the active floodplain of any fish-bearing waterbody, with the exception of small caches (up to 210 gallons) for motor boats, float planes, ski planes and small equipment.</p>	<p><b>Stipulation A-2.</b> Except during overland moves and seismic operations, fuel, other petroleum products, and other liquid chemicals designated by the AO—whether in excess of 660 gallons in a single tank or in excess of 1,320 gallons in multiple containers—shall be stored within an impermeable lined and diked area capable of containing 110 percent of the stored volume. The liner material shall be compatible with the stored product and capable of remaining impermeable during typical weather extremes expected throughout the storage period. Permanent fueling stations shall be lined or have impermeable protection to prevent fuel migration to the environment from overfills and spills. The storage area shall be located at least 500 ft from the active flood plain of any waterbody, with the exception of small caches (up to 210 gallons) for motorboats, float planes, and ski planes.</p>	<p><b>A-4 (b)</b></p> <p><b>(c)(d)</b></p> <p><b>E-2</b></p>	

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>A. Waste Prevention, Handling, and Disposal and Spills</b> (continued)	<b>Stipulation A-3.</b> Refueling of equipment within 500 ft of the active flood plain of any fish-bearing waterbody and 100 ft from non-fish-bearing waterbodies is prohibited. The BLM acknowledges that exceptions are commonly warranted for refueling motorboats, float planes, ski planes, small generators, water pumps, and other light equipment used in conjunction with temporary activities.		<b>Stipulation A-3.</b> Refueling of equipment within 500 ft of the active flood plain of any waterbody is prohibited, with the exception of refueling motorboats, float planes, ski planes, small generators, water pumps, and other light equipment used in conjunction with temporary activities.	<b>A-5</b>
	<b>ROP A-1.</b> Attracting wildlife to food and garbage is prohibited. All feasible precautions shall be taken to avoid attracting wildlife to food and garbage. A current list of approved precautions, specific to type of permitted use, can be obtained from the AO. Lessees and permitted users shall have a written procedure to ensure that the handling and disposal of putrescible waste will be accomplished in a manner to prevent the attraction of wildlife.			<b>A-2 (a)</b>
	<b>ROP A-2.</b> Burial of garbage is prohibited. All putrescible waste shall be incinerated or composted in a manner approved by the AO. All solid waste, including incinerator ash, shall be removed from BLM lands and disposed of in an approved waste-disposal facility in accordance with U.S. Environmental Protection Agency (EPA) and Alaska Department of Environmental Conservation (ADEC) regulations and procedures. Burial of human waste is prohibited except as authorized by the AO.			<b>A-2 (b)</b>
	<b>ROP A-3.</b> Except as specifically provided, all pumpable solid, liquid, and sludge waste shall be disposed of by injection in accordance with EPA, ADEC, and the Alaska Oil and Gas Conservation Commission regulations and procedures. On-pad temporary muds and cuttings storage will be allowed as necessary to facilitate annular injection and/or backhaul operations.			<b>A-2 (c)</b>
	<b>ROP A-4. Wastewater disposal:</b> <ol style="list-style-type: none"> <li>a. Unless authorized by the National Pollution Discharge Elimination System (NPDES) or State permit, disposal of domestic wastewater into bodies of fresh, estuarine, and marine water, including wetlands, is prohibited.</li> <li>b. Surface discharge of reserve-pit fluids is prohibited unless authorized by applicable NPDES, ADEC, and NSB permits and approved by the AO.</li> <li>c. Disposal of produced waters in upland areas, including wetlands, will be by subsurface-disposal techniques. The AO may permit alternate disposal methods if the lessee demonstrates that subsurface disposal is not feasible or prudent.</li> <li>d. Discharge of produced waters into open or ice-covered marine waters less than 33 ft (10 m) is prohibited. The AO may approve discharges into waters greater than 33 ft (10 m) deep based on a case-by-case review of environmental factors and consistency with the conditions of an NPDES permit.</li> </ol> Alternate disposal methods will require an NPDES permit certified by the State.			<b>A-2 (d)</b>  <b>A-6</b>  <b>A-7</b>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>A. Waste Prevention, Handling, and Disposal and Spills</b> (continued)	<b>ROP A-5.</b> Areas of operation shall be left clean of all debris.			<b>A-1</b>
	<b>ROP A-6.</b> Operators shall prevent migration of fuel or chemicals from storage areas to the environment. Notice of any reportable spill (as required by 40 CFR 300.125 and 18 AAC 75.300) shall be given to the AO as soon as possible, but no later than 24 hours after occurrence. Other Federal, State, and NSB entities shall be notified as required by law. All spills shall be cleaned up immediately and to the satisfaction of the AO and all agencies with regulatory authority over spills, including the EPA, ADEC, and the U.S. Coast Guard.			<b>A-4(f)</b>
	<b>ROP A-7.</b> Before production and as required by law, lessees shall develop spill prevention and response contingency plans.			<b>A-4</b>
	<b>ROP A-8.</b> All fuel containers, including barrels and propane tanks, shall be marked with the responsible party's name, product type, and year filled or purchased.			<b>A-4(e)</b>
<b>B. Ice Roads and Water Use</b>	<b>Stipulation B-1.</b> Water withdrawal is not allowed during winter from lakes less than 7 ft (2.1 m) deep unless the water body lacks a connection with, and is not subject to, seasonal flooding by a fish-bearing stream. The AO may authorize water withdrawals from any lakes, creeks, or rivers if the proponent demonstrates that the location and volume of water withdrawal does not endanger resident fish populations.	<b>Stipulation B-1.</b> Water withdrawal from rivers and streams during winter is prohibited. Water withdrawal is limited to 15% of the under-ice water volume in any fish-bearing lake.	After consultation with the appropriate Federal, State, and NSB regulatory and resource agencies, the AO may authorize withdrawals from any lake if the proponent demonstrates that no fish exist in the lake.	<b>B-1</b>
				<b>B-2(a)-(f)</b>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>B. Ice Roads and Water Use</b> (continued)			<p>A water-monitoring plan will be required to assess drawdown and water quality changes before, during, and after pumping any fish-bearing lakes.</p> <p>Ice chips may be removed from lakes and shallow rivers that the proponent demonstrates are not fish bearing and where the ice is grounded.</p>	
			<p><b>Stipulation B-2.</b> Compaction of snow cover or snow removal from fish-bearing waterbodies shall be prohibited except at approved ice-road crossings and water pumping stations on lakes.</p>	<b>B-2(h)</b>
<b>C. Overland Moves and Seismic Work</b>	<p><b>Stipulation C-1.</b> The following restrictions apply to overland moves, seismic work, and any similar use of heavy equipment (other than actual excavations as part of construction) on non-roaded surfaces during the winter season:</p>			
	<p><b>a.</b> Operators shall consult with the Fish and Wildlife Service (FWS) and National Marine Fisheries Service (NOAA Fisheries, formerly NMFS) before initiating activities in coastal habitat between October 30 and April 15. Activities are prohibited within 1 mile of known or observed polar bear dens.</p> <p><b>b.</b> Ground operations are to begin only after frost and snow cover have reached sufficient depths to meet the tundra protection objectives of minimizing compaction of soils and the breakage, abrasion, compaction, or displacement of vegetation. Ground operations shall cease when the spring melt of snow begins, approximately May 5 in the foothills area where elevations exceed 300 ft and approximately May 15 in the northern coastal areas. The exact dates will be determined by the AO.</p>		<p><b>C-1(b)</b></p> <p><b>C-2(a)</b></p>	
	<p><b>ROP C-1.</b> The following restrictions apply to overland moves, seismic work, and any similar use of heavy equipment (other than actual excavations as part of construction) on non-roaded surfaces during the winter season:</p>			
	<p><b>a.</b> Snow bridges shall be removed or breached immediately after use or before spring breakup. Ramps and bridges shall be substantially free of soil and/or debris.</p> <p><b>b.</b> To avoid additional freeze down of deep-water pools harboring over-wintering fish, waterways shall be crossed at shallow riffles from point bar to point bar whenever possible.</p>		<p><b>C-3</b></p> <p><b>C-4</b></p>	

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				Preferred Alternative (Table II-03)
<p><b>C. Overland Moves and Seismic Work</b> (continued)</p>	<p>c. On-the-ground activities shall use low-ground-pressure vehicles such as Rolligons, ARDCO, Trackmaster, Nodwell, or similar types of vehicles. A current list of approved vehicles can be obtained from the AO. Limited use of tractors equipped with wide tracks or "shoes" will be allowed to pull trailers.</p> <p>d. To reduce the possibility of ruts, vehicles shall avoid using the same trails for multiple trips unless necessitated by serious safety or superseding environmental concern. This provision does not apply to ice roads or hardened snow trails for use by Rolligons.</p> <p>e. Bulldozing of tundra, trails, or seismic lines is prohibited. Clearing of drifted snow along a trail, seismic line, or in a camp is allowed to the extent that the tundra mat is not disturbed.</p>			<p><b>C-2(b)-(e)</b></p>
	<p>f. Motorized ground-vehicle use will be minimized within 1 mile of any raptor nest from April 15 through August 15, with the exception that use will be minimized near gyrfalcon nests beginning March 15. Such use may be prohibited within ½ mile of active raptor nests.</p> <p>g. Refueling of equipment, when practical, should occur at least 500 ft from fish bearing waterbodies and 100 ft from other waterbodies.</p>		<p><b>Stipulation C-2.</b> The following restrictions apply to overland moves, seismic work, and any similar use of heavy equipment (other than actual excavations as part of construction) on non-roaded surfaces during the winter season:</p> <p>a. Motorized ground-vehicle use will be minimized within 1 mile of any raptor nest from April 15 through August 15, with the exception that use will be minimized near gyrfalcon nests beginning March 15. Such use will be prohibited within ½ mile of known raptor-nesting sites.</p> <p>b. Refueling of equipment is prohibited within the active floodplain of any waterbody.</p>	<p><b>(Note: C-2a removed from the Preferred Alternative-- not relevant to winter operations)</b></p> <p><b>A-5</b></p>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>D. Oil and Gas Exploratory Drilling</b>	<b>Stipulation D-1.</b> Exploratory drilling in shallow lakes, streams, lake beds and the active floodplain will only be approved if the applicant can demonstrate to the satisfaction of the AO that impacts to fish, wildlife, vegetation, and the hydrologic condition are minimal.		<b>Stipulation D-1.</b> Exploratory drilling in river, stream, and lakebeds, as determined by the active floodplain, is prohibited. In addition, exploratory drilling is not allowed within ¼ mile of any fish-bearing deep lake as determined to be in lake zone III, i.e., depth greater than 4 m (Mellor 1985) as shown in Map 20. If the fish-bearing status of the waterbody is unknown, the burden is on the lessee to demonstrate whether fish are absent.	<b>D-1</b>
			<b>Stipulation D-2.</b> Permanent facilities such as airstrips and roads shall not be constructed during the exploration phase of oil and gas development.	<b>D-2</b>
<b>E. Facility Design and Construction</b>		<b>Stipulation E-1.</b> The following subsistence, wildlife habitat, cultural/paleontological, and traditional/cultural land use areas are of significant concern to resource managers and local communities. (Resources of concern are listed in parentheses on the following pages.) Should significant resources occur within these land use areas based on site specific investigation, additional design features or mitigation developed through site/project specific NEPA analysis will be required to minimize impacts. As listed on the following pages, setbacks include the bed of waterbodies and are measured from the active floodplain.	<b>Stipulation E-1.</b> Permanent oil and gas facilities, including roads, airstrips, and pipelines are prohibited within and adjacent to the waterbodies and within the prescribed distances from other resources listed below (see Map 84) at the distances identified to protect fish and raptor habitat, cultural and paleontological resources, and subsistence and other resource values. (Resources of concern are listed in parentheses on the following pages.) Setbacks include the bed of the waterbody and are measured from the active floodplain. On a case-by-case basis, and in consultation with appropriate Federal, State, and NSB regulatory and	<b>K-1 as noted below</b>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>E. Facility Design and Construction</b> (continued)		<p><b>Stipulation E-1. (continued)</b></p> <ul style="list-style-type: none"> <li>a. Ikpikpuk River: extending from the mouth south through the raptor nesting area extending from section 13, T7N., R12W. UM, to T2N., R 12W., UM where up to a 1-mile setback may be required (fish, raptors, subsistence, cultural, and paleontological resources).</li> <li>b. Alaktak River: up to ½-mile setbacks extending from the mouth to the Ikpikpuk River (fish and subsistence resources).</li> <li>c. Chipp River: up to ½-mile setbacks extending from the mouth to the Ikpikpuk River (fish and subsistence resources).</li> <li>d. Oumalik River: up to ½-mile setbacks downstream from section 11, T5N., R15W.,UM (fish and subsistence resources).</li> <li>e. Titaluk River: up to ½-mile setbacks downstream from section 30, T2N., R16W.,UM (fish and subsistence resources).</li> <li>f. Kigalik River: up to ½-mile setbacks (riparian, cultural, and paleontological resources).</li> <li>g. Maybe Creek: up to ½-mile setbacks (riparian, cultural, and paleontological resources).</li> <li>h. Topagoruk River: up to ½-mile setbacks downstream from the confluence with Ishuktak Creek (fish and subsistence resources).</li> </ul>	<p><b>Stipulation E-1. (continued)</b></p> <p>resource agencies, essential pipeline and road crossings will be permitted through setback areas in those instances where no other suitable sites are available. Stream crossings will be sited perpendicular to the main channel flow; lake crossings will be at the narrowest point. Road crossings are prohibited in the setback area adjacent to the Colville River (see items below).</p> <ul style="list-style-type: none"> <li>a. Ikpikpuk River: a 1/2-mile setback from the bank of the Ikpikpuk River extending from the mouth south to the Raptor nesting area extending from section 13, T7N., R12W. **Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>E. Facility Design and Construction</b> (continued)			<b>Stipulation E-1.</b> (continued)  v. Bays and Lagoons: ½-mile setbacks along Kasegaluk Lagoon, Kuk River, and Peard Bay, and coastal waters within NPR-A east of Barrow, including Elson Lagoon, Dease Inlet, and Admiralty Bay. (Note: Kasegaluk Lagoon would be unavailable for leasing under this alternative).	<b>K-3 K-6 K-8 and IDA</b>
			<b>Stipulation E-2.</b> Permanent roads (i.e. gravel, sand) connecting to a road system or docks outside the Planning Area are prohibited. Permanent roads necessary to connect pads within independent, remote oil fields are allowed but they must be designed and constructed to create minimal environmental impacts. Roads connecting production sites between separate oil fields may be considered.	<b>E-1</b>
	<b>ROP E-1.</b> All crude oil, produced water, seawater, and natural gas pipelines shall be designed, constructed, and operated under an approved Quality Assurance/Quality Control plan.			<b>E-4</b>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>E. Facility Design and Construction</b> (continued)	<b>ROP E-2.</b> The lessee shall minimize the development footprint.			<b>E-5</b>
	<b>ROP E-3.</b> Bridges, rather than culverts, shall be used for any allowed road crossings on all rivers identified by the AO to reduce the potential of ice-jam flooding and erosion. When necessary on smaller streams, culverts shall be large enough to avoid restricting fish passage or adversely affecting natural stream flow.			<b>E-6</b>
	<b>ROP E-4.</b> Design, locate, construct, and operate permanent oil and gas infrastructure to minimize adverse effects on caribou movement.			<b>E-7(a)-(c)</b>
	<b>ROP E-5.</b> Pipelines and roads shall be designed to facilitate caribou and subsistence user passage.	<p><b>ROP E-5.</b> Aboveground pipelines shall be elevated at least 5 ft, as measured from the ground to the bottom of the pipe, except where the pipeline intersects a road, pad, or a ramp installed to facilitate wildlife passage and subsistence passage and access.</p> <p>Lessees shall separate elevated pipelines from roads by a minimum of 500 ft, if feasible. Separating roads from pipelines may not be feasible within narrow land corridors between lakes and where pipe and road converge on a drill pad.</p>		<b>E-7(a)</b> <b>(b)</b> <b>(c)</b>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>E. Facility Design and Construction</b> (continued)	<b>ROP E-6.</b> Permanent oil and gas facilities upon or within 500 ft of shallow lakes, streams, lake beds, estuaries, and their active floodplain will only be approved if the applicant can demonstrate to the satisfaction of the AO that adverse impacts to fish, wildlife, vegetation, and the hydrologic condition are minimal. Essential pipeline and road crossings will be permitted on a case-by-case basis.		<b>Stipulation E-3.</b> For those waterbodies not listed in stipulation E-1, permanent oil and gas facilities, including roads, airstrips, and pipelines, are prohibited upon or within 500 ft as measured from the active floodplain. Essential pipeline and road crossings will be permitted on a case-by-case basis.	<b>E-2</b>
	<b>ROP E-7.</b> Gravel mine site reclamation will be in accordance with a plan approved by the AO.		<b>Stipulation E-4.</b> Gravel mine sites are prohibited within the active floodplain of a river, stream, or lake. Gravel mine site reclamation will be in accordance with a plan approved by the AO.	<b>E-8</b>
	<b>ROP E-8.</b> Coastal facilities shall be designed, sited, and constructed to prevent significant changes to nearshore oceanographic circulation patterns and water-quality characteristics (e.g., salinity, temperature, suspended sediments) that result in measurements exceeding water-quality criteria, and must maintain free passage of marine and anadromous fish.		<b>Stipulation E-5.</b> Causeways and docks are prohibited in river mouths or deltas. Artificial gravel islands and bottom-founded structures are prohibited in river mouths or active stream channels on river deltas, except as provided in the paragraphs below.	<b>E-3</b>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
			<p>Approved causeways docks, artificial gravel islands, and bottom-founded structures, shall be designed, sited, and constructed to prevent significant changes to nearshore oceanographic circulation patterns and water-quality characteristics (e.g., salinity, temperature, suspended sediments) that result in measurements exceeding water-quality criteria, and must maintain free passage of marine and anadromous fish. A monitoring program will be required to address the objectives of water quality and free passage of fish. Additional mitigation shall be required where significant deviation from these objectives occurs.</p>	
<p><b>F. Air Traffic*</b></p>	<p><b>ROP F-1.</b> All aircraft use shall be conducted in a manner that will minimize impacts to wildlife and birds.</p>		<p><b>ROP F-1.</b> Aircraft shall maintain an altitude of at least 1,500 ft AGL when within ½ mile of cliffs identified as raptor nesting sites from April 15 through August 15 and within ½ mile of known gyrfalcon nest sites from March 15 to August 15, unless doing so would endanger human life or violate safe flying practices. Permittees shall obtain information from BLM necessary to plan flight routes when routes may go near falcon nests.</p>	<p><b>F-1(a)</b></p>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

			<b>Preferred Alternative (Table II-03)</b>
<b>F. Air Traffic*</b> (continued)		<b>Stipulation F-1.</b> Aircraft shall maintain an altitude of at least 1,000 ft above ground level (AGL) (except for takeoffs and landings) over caribou winter ranges from October 1 through May 15.	<b>F-1(b)</b>
		<b>Stipulation F-2.</b> Aircraft shall maintain an altitude of at least 2,000 ft AGL over the caribou insect relief area from June 20 through July 31, unless doing so would endanger human life or violate safe flying practices.	<b>F-1(e) (f)</b>
<b>Note:</b> *The BLM's authority to restrict air traffic is limited to those activities associated with use authorization on BLM-administered lands.			
<b>G. Oil Field Abandonment</b>		<b>Stipulation G-1.</b> Upon field abandonment or expiration of a lease or oil- and gas-related permit, all facilities shall be removed and sites rehabilitated to the satisfaction of the AO after determining whether it is in the best interest of the public to retain some or all of the facilities.	<b>G-1</b>
<b>H. Subsistence</b>		<p><b>Stipulation H-1.</b> All operations shall be conducted in a manner that prevents unreasonable conflicts with subsistence activities.</p> <p>Before submitting an application to the BLM, the applicant shall consult with directly affected subsistence communities, NSB, and the Subsistence Advisory Panel to discuss the siting, timing and methods of proposed operations. Through this consultation, the applicant shall make every reasonable effort, including such mechanisms as a conflict avoidance agreement and mitigating measures, to ensure that proposed activities will not result in unreasonable interference with subsistence activities.</p> <p>The applicant shall submit documentation of consultation efforts and a written plan that shows how the applicant's activities, in combination with other activities in the area, will be scheduled and located to prevent unreasonable conflicts with subsistence activities.</p> <p>In the event that no agreement is reached between the parties, the AO shall consult with the directly involved parties and determine which activities will occur, including the timeframes.</p>	<p><b>H-1</b></p> <p><b>H-2</b></p>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				Preferred Alternative (Table II-03)
<b>H. Subsistence</b> (continued)	<p><b>ROP H-1.</b> During exploration, development, and production the lessee shall develop and implement a plan, approved by the AO in consultation with the Research and Monitoring Team and the Subsistence Advisory Panel, to monitor the effects of activities on subsistence. The lessee shall provide biannual reports to BLM, the Research and Monitoring Team, and the Subsistence Advisory Panel.</p>			H-1(c)(7)
<b>I. Orientation Program</b>	<p><b>ROP I-1.</b> The lessee shall include in any application for permit to drill a proposed orientation program for all personnel involved in exploration or development and production activities (including personnel of lessee's agents, contractors, and subcontractors) for review and approval by the AO. The program shall be designed in sufficient detail to inform individuals working on the project of specific types of environmental, social, and cultural concerns that relate to the Planning Area. The program shall address the importance of not disturbing archaeological and biological resources and habitats, including endangered species, fisheries, bird colonies, and marine mammals and provide guidance on how to avoid disturbance. Guidance shall include the production and distribution of information cards on endangered and/or threatened species in the Planning Area. The program shall be designed to increase sensitivity and understanding of personnel to community values, customs, and lifestyles in areas in which personnel will be operating. The orientation program shall also include information concerning avoidance of conflicts with subsistence, commercial fishing activities, and pertinent mitigation.</p> <p>The program shall be attended at least once a year by all personnel involved in on-site exploration or development and production activities (including personnel of lessee's agents, contractors, and subcontractors) and all supervisory and managerial personnel involved in lease activities of the lessee and its agents, contractors, and subcontractors. Individual training is transferable from one facility to another except for elements of the training specific to a particular site.</p> <p>Lessees shall maintain a record onsite of all personnel who attend the program for so long as the site is active, though not to exceed the 5 most recent years of operations. This record shall include the name and dates(s) of attendance of each attendee.</p>			I-1

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

				<b>Preferred Alternative (Table II-03)</b>
<b>J. Miscellaneous Activities</b>	<b>Stipulation J-1.</b> If necessary to construct permanent facilities within the Colville River Special Area, all reasonable and practicable efforts shall be made to locate permanent facilities as far from raptor nests as practical and feasible, but consistent with the following: alteration of limited, high quality habitat that could significantly reduce prey availability shall be minimized. Of particular concern are ponds, lakes, wetlands, and riparian habitats.		<b>Stipulation J-1.</b> If necessary to construct permanent facilities within the Colville River Special Area, all reasonable and practicable efforts shall be made to locate permanent facilities as far from raptor nests as feasible, but consistent with the following: within 15 miles of nest sites, alteration of limited, high quality habitat that could significantly reduce prey availability shall be prohibited. Of particular concern are ponds, lakes, wetlands and riparian habitats.	<b>K-7</b>
			<b>Stipulation J-2.</b> Petroleum exploration and production activities are prohibited within ½ mile of occupied grizzly bear dens, identified by the ADF&G, unless alternative mitigation measures are approved by the AO in consultation with appropriate Federal, State, and NSB regulatory and resource agencies.	<b>C-1(a)</b>
		<b>ROP J-1.</b> Oil and gas lessees and their contractors and subcontractors will prepare and implement bear-interaction plans to minimize conflicts between bears and humans. These plans shall include measures to: (a) minimize attraction of bears to the drill sites; (b) organize layout of buildings and work areas to minimize human/bear interactions; (c) warn personnel of bears near or on drill sites and identify proper procedures to be followed; (d) if authorized, deter bears from the drill site; (e) provide contingencies in the event bears do not leave the site or cannot be deterred by authorized personnel; (f) discuss proper storage and disposal of materials that may be toxic to bears; and (g) provide a systematic record of bears on the site and in the immediate area. Lessees shall develop educational programs and camp layout and management plans as they prepare their lease operations plans.		<b>A-8(a)-(g)</b>

**Table II-02. Stipulations and Required Operating Procedures (ROP's) (continued)**

<b>New Stipulations and Required Operating Procedures (i.e., not in Draft IAP/EIS under any Alternative)</b>		
<b>Endangered Species Act-Section 7 Consultation</b>	<p><b>Stipulation K.</b> The lease area may now or hereafter contain plants, animals, or their habitats determined to be threatened, endangered, or other special status species. BLM may recommend modifications to exploration and development proposals to further its conservation and management objective to avoid BLM-approved activity that will contribute to a need to list such a species or their habitat. BLM may require modifications to or disapprove proposed activity that is likely to result in jeopardy to the continued existence of a proposed or listed threatened or endangered species or result in the destruction or adverse modification of a designated or proposed critical habitat. BLM will not approve any ground-disturbing activity that may affect any such species or critical habitat until it completes its obligations under applicable requirements of the Endangered Species Act as amended, 16 U.S.C. § 1531 et seq., including completion of any required procedure for conference or consultation.</p>	<b>L</b>
<b>Various Activities</b>	<p>No corresponding stipulations or required operating procedures for Alternative A, B, or C.</p>	<p><b>B-2 (g)</b>  <b>E-9</b>  <b>E-10</b>  <b>E-11</b>  <b>E-12</b>  <b>F-1(c) and (d)</b>  <b>K-1(j)</b>  <b>K-1(l)</b>  <b>K-1(m)</b>  <b>K-1(n)</b>  <b>K-1(p)</b>  <b>K-5</b></p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>A. Waste Prevention, Handling, Disposal; Spills, and Public Safety</b>	<p><b>A-1 Required Operating Procedure</b>  <b>Objective:</b> Protect the health and safety of oil field workers and the general public by avoiding the disposal of solid waste and garbage near areas of human activity.  <b>Requirement/Standard:</b> Areas of operation shall be left clean of all debris.</p>
	<p><b>A-2 Required Operating Procedure</b>  <b>Objective:</b> Minimize impacts on the environment from non-hazardous waste generation. Encourage continuous environmental improvement. Protect the health and safety of oil field workers and the general public. Avoid human-caused changes in predator populations.  <b>Requirement/Standard:</b> Lessees/permittees shall prepare and implement a comprehensive waste management plan for all phases of exploration and development, including seismic activities. The plan shall be submitted to the AO for approval, in consultation with Federal, State and North Slope Borough regulatory and resource agencies, as appropriate (based on agency legal authority and jurisdictional responsibility), as part of a plan of operations or other similar permit application. The plan shall consider and take into account the following requirements:  <b>a) Methods to avoid attracting wildlife to food and garbage:</b> All feasible precautions shall be taken to avoid attracting wildlife to food and garbage. (A current list of approved precautions, specific to type of permitted use, can be obtained from the AO.)  <b>b) Disposal of putrescible waste:</b> Current requirements prohibit the burial of garbage. Lessees and permitted users shall have a written procedure to ensure that the handling and disposal of putrescible waste will be accomplished in a manner that prevents the attraction of wildlife. All putrescible waste shall be incinerated, backhauled, or composted in a manner approved by the AO. All solid waste, including incinerator ash, shall be disposed of in an approved waste-disposal facility in accordance with U.S. Environmental Protection Agency (EPA) and Alaska Department of Environmental Conservation (ADEC) regulations and procedures. The burial of human waste is prohibited except as authorized by the AO.  <b>c) Disposal of pumpable waste products:</b> Except as specifically provided, BLM currently requires all pumpable solid, liquid, and sludge waste be disposed of by injection in accordance with EPA, ADEC, and the Alaska Oil and Gas Conservation Commission regulations and procedures. On-pad temporary muds and cuttings storage, as approved by ADEC, will be allowed as necessary to facilitate annular injection and/or backhaul operations.  <b>d) Disposal of wastewater and domestic wastewater:</b> BLM currently prohibits wastewater discharges or disposal of domestic wastewater into bodies of fresh, estuarine, and marine water, including wetlands, unless authorized by the National Pollution Discharge Elimination System (NPDES) or State permit.</p>

**Table II-03**

**Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

Stipulations and Required Operating Procedures for the Preferred Alternative	
<p><b>A. Waste Prevention, Handling, Disposal; Spills, and Public Safety</b> (continued)</p>	<p><b>A-3 Required Operating Procedure</b>  <b>Objective:</b> Minimize pollution through effective hazardous-materials contingency planning.  <b>Requirement/Standard:</b> For oil- and gas-related activities, a Hazardous-Materials Emergency-Contingency Plan shall be prepared and implemented before transportation, storage, or use of fuel or hazardous substances. The plan shall include a set of procedures to ensure prompt response, notification, and cleanup in the event of a hazardous substance spill or threat of a release. Procedures applicable to fuel and hazardous substances handling (associated with transportation vehicles) may consist of Best Management Practices if approved by the AO. The plan shall include a list of resources available for response (e.g., heavy-equipment operators, spill-cleanup materials or companies), and names and phone numbers of Federal, State, and NSB contacts. Other Federal and State regulations may apply and require additional planning requirements. All staff shall be instructed regarding these procedures.</p>
	<p><b>A-4 Required Operating Procedure</b>  <b>Objective:</b> Minimize the impact of contaminants on fish, wildlife, and the environment, including wetlands, marshes and marine waters, as a result of fuel, crude oil and other liquid chemical spills. Protect subsistence resources and subsistence activities. Protect public health and safety.  <b>Requirement/Standard:</b> Before initiating any oil and gas or related activity or operation, including field research/surveys and/or seismic operations, lessees/permittees shall develop a comprehensive spill prevention and response contingency plan per 40 CFR 112 (OPA). The plan shall consider and take into account the following requirements:  <b>a) On-site clean-up materials.</b> Sufficient oil-spill-cleanup materials (absorbents, containment devices, etc.) shall be stored at all fueling points and vehicle-maintenance areas and shall be carried by field crews on all overland moves, seismic work trains, and similar overland moves by heavy equipment.  <b>b) Storage Containers.</b> Fuel and other petroleum products and other liquid chemicals shall be stored in proper containers at approved locations. Except during overland moves and seismic operations, fuel, other petroleum products, and other liquid chemicals designated by the AO in excess of 1,320 gallons in storage capacity, shall be stored within an impermeable lined and diked area or within approved alternate storage containers such as overpacks, capable of containing 110 percent of the stored volume.  <b>c) Liner Materials.</b> Liner material shall be compatible with the stored product and capable of remaining impermeable during typical weather extremes expected throughout the storage period.  <b>d) Permanent Fueling Stations.</b> Permanent fueling stations shall be lined or have impermeable protection to prevent fuel migration to the environment from overfills and spills.  <b>e) Proper Identification of Containers.</b> All fuel containers, including barrels and propane tanks, shall be marked with the responsible party's name, product type, and year filled or purchased.  <b>f) Notice of Reportable Spills.</b> Notice of any reportable spill (as required by 40 CFR 300.125 and 18 AAC 75.300) shall be given to the AO as soon as possible, but no later than 24 hours after occurrence.</p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>A. Waste Prevention, Handling, Disposal; Spills, and Public Safety</b> (continued)	<p><b>A-5 Required Operating Procedure</b>  <b>Objective:</b> Minimize the impact of contaminants from refueling operations on fish, wildlife, and the environment.  <b>Requirement/Standard:</b> Refueling of equipment within 500 ft of the active flood plain of any fish-bearing water body and 100 ft from non-fish-bearing water bodies is prohibited. Small caches (up to 210 gallons) for motorboats float planes, ski planes, and small equipment, e.g. portable generators and water pumps, will be permitted. The AO may allow storage and operations at areas closer than the stated distances if properly designed to account for local hydrologic conditions.</p>
	<p><b>A-6 Required Operating Procedure</b>  <b>Objective:</b> Minimize the impact on fish, wildlife, and the environment from contaminants associated with the exploratory drilling process.  <b>Standard/Requirement:</b> Surface discharge of reserve-pit fluids is prohibited unless authorized by applicable NPDES, ADEC, and NSB permits (as appropriate) and approved by the AO.</p>
	<p><b>A-7 Required Operating Procedure</b>  <b>Objective:</b> Minimize the impacts to the environment of disposal of produced fluids recovered during the development phase on fish, wildlife, and the environment.  <b>Requirement/Standard:</b> Procedures for the disposal of produced fluids shall meet the following requirements:                      a) In upland areas, including wetlands, disposal will be by subsurface-disposal techniques. The AO may permit alternate disposal methods if the lessee demonstrates that subsurface disposal is not feasible or prudent and the alternative method will not result in adverse environmental effects.                      b) In marine waters, approval of discharges by the AO will be based on a case-by-case review of environmental factors and consistency with the conditions of an NPDES permit. Discharge of produced fluids will be prohibited at locations where currents and water depths, in combination with other conditions, are not adequate to prevent impacts to known biologically sensitive areas. Alternate disposal methods will require an NPDES permit certified by the State.</p>
	<p><b>A-8 Required Operating Procedure</b>  <b>Objective:</b> Minimize conflicts resulting from interaction between humans and bears during leasing and associated activities.  <b>Requirement/Standard:</b> Oil and gas lessees and their contractors and subcontractors will, as a part of preparation of lease operation planning, prepare and implement bear-interaction plans to minimize conflicts between bears and humans. These plans shall include measures to:                      a) Minimize attraction of bears to the drill sites.                      b) Organize layout of buildings and work areas to minimize human/bear interactions.                      c) Warn personnel of bears near or on drill sites and identify proper procedures to be followed.                      d) Establish procedures, if authorized, to deter bears from the drill site.                      e) Provide contingencies in the event bears do not leave the site or cannot be deterred by authorized personnel.                      f) Discuss proper storage and disposal of materials that may be toxic to bears.                      g) Provide a systematic record of bears on the site and in the immediate area.</p>

**Table II-03**

**Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>B. Water Use for Permitted Activities</b>	<p><b>B-1 Required Operating Procedure</b>  <b>Objective:</b> Maintain populations of, and adequate habitat for, fish and invertebrates.  <b>Requirement/Standard:</b> Water withdrawal from rivers and streams during winter is prohibited.</p>
	<p><b>B-2 Required Operating Procedure</b>  <b>Objective:</b> Maintain natural hydrologic regimes in soils surrounding lakes and ponds and maintain populations of, and adequate habitat for, fish and invertebrates.  <b>Requirement/Standard:</b> Water withdrawal from lakes may be authorized on a site-specific basis depending on size, water volume, depth and fish population and species diversification. Current water withdrawal requirements specify:                      a) Water withdrawals from any fish bearing lake 7 ft or deeper shall be limited to 15 percent of the estimated free water volume located beneath the ice.                      b) Water withdrawals from lakes with depths between 5 and 7 ft that contain only ninespine stickleback and/or Alaska blackfish are limited to up to 30 percent of the under-ice volume.                      c) Water withdrawal may be authorized from any lake if the proponent demonstrates that no fish exist in the lake.                      d) A water-monitoring plan may be required to assess draw down and water quality changes before, during, and after pumping any fish-bearing lake.                      e) The removal of naturally grounded ice may be authorized from lakes and shallow rivers on a site-specific basis depending upon its size, water volume, depth, and fish population and species diversification.                      f) Removed ice aggregate shall be included in the 15 percent or 30 percent (whichever is the appropriate case) withdrawal limits, unless otherwise approved.                      g) Any water intake structures in fish-bearing waters shall be designed, operated and maintained to prevent fish entrapment, entrainment, or injury.                      h) Compaction of snow cover or snow removal from fish-bearing water bodies shall be prohibited except at approved ice road crossings, water pumping stations on lakes or areas of grounded ice.</p>
<b>C. Winter Overland Moves and Seismic Work</b>	<p>The following stipulations and ROP's apply to overland moves, seismic work, and any similar cross-country vehicle use of heavy equipment on non-roaded surfaces during the winter season. These restrictions do not apply to the use of such equipment on ice roads after they are constructed.</p>
	<p><b>C-1 Required Operating Procedure</b>  <b>Objective:</b> Protect grizzly bear, polar bear, and marine mammal denning and/or birthing locations.  <b>Requirement/Standard:</b>                      a) Cross-country use of heavy equipment and seismic activities are prohibited within ½ mi of occupied grizzly bear dens identified by ADF&amp;G unless alternative mitigation measures are approved by the AO in consultation with ADF&amp;G.                      b) Cross-country use of heavy equipment and seismic activities are prohibited within 1 mi of known or observed polar bear dens or seal birthing lairs. Operators shall consult with the U.S. Fish and Wildlife Service (FWS) and/or NOAA Fisheries, as appropriate, before initiating activities in coastal habitat between October 30 and April 15.</p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>Overland Moves and Seismic Work</b> (continued)	<p><b>C-2 Required Operating Procedure</b>  <b>Objective:</b> Protect stream banks, minimize compaction of soils, and minimize the breakage, abrasion, compaction, or displacement of vegetation.  <b>Requirement/Standard:</b>                      a) Ground operations shall be allowed only when frost and snow covers are at sufficient depths to protect the tundra. Ground operations shall cease when the spring snowmelt begins, approximately May 5 in the foothills area where elevations reach or exceed 500 ft, and approximately May 15 in the northern coastal areas. The exact dates will be determined by the AO.                      b) Only low-ground-pressure vehicles shall be used for on-the-ground activities off ice roads or pads. A current list of approved vehicles can be obtained from the AO. Limited use of tractors equipped with wide tracks or "shoes" will be allowed to pull trailers, sleighs, or other equipment with approved undercarriage. <u>Note: This provision does not include the use of heavy equipment such as front-end loaders and similar equipment required during ice road construction.</u>                      c) Bulldozing of tundra mat and vegetation, trails, or seismic lines is prohibited; however, on existing trails, seismic lines or camps, clearing of drifted snow is allowed to the extent that the tundra mat is not disturbed.                      d) To reduce the possibility of ruts, vehicles shall avoid using the same trails for multiple trips unless necessitated by serious safety or superseding environmental concern. This provision does not apply to hardened snow trails for use by low-ground-pressure vehicles such as Rolligons.                      e) The location of winter ice roads shall be designed and located to minimize compaction of soils and the breakage, abrasion, compaction, or displacement of vegetation. Offsets may be required to avoid using the same route or track in the subsequent year.</p>
	<p><b>C-3 Required Operating Procedure</b>  <b>Objective:</b> Maintain natural spring runoff patterns, avoid flooding, prevent streambed sedimentation, protect water quality and protect stream banks.  <b>Requirement/Standard:</b> Snow and ice bridges shall be removed, breached or slotted before spring breakup. Ramps and bridges shall be substantially free of soil and debris.</p>
	<p><b>C-4 Required Operating Procedure</b>  <b>Objective:</b> Avoid additional freeze down of deep-water pools harboring over-wintering fish and invertebrates used by fish.  <b>Requirement/Standard:</b> Rivers and streams shall be crossed at shallow riffles from point bar to point bar whenever possible.</p>
<b>D. Oil and Gas Exploratory Drilling</b>	<p><b>D-1 Lease Stipulation</b>  <b>Objectives:</b> Protect fish-bearing rivers, streams and lakes from blowouts, and minimize alteration of riparian habitat.  <b>Requirement/Standard:</b> Exploratory drilling is prohibited in rivers and streams, as determined by the active floodplain, and fish-bearing lakes, except where the lessee can demonstrate on a site-specific basis that impacts would be minimal or it is determined that there is no feasible or prudent alternative.</p>

**Table II-03**

**Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

Stipulations and Required Operating Procedures for the Preferred Alternative	
<p><b>D. Oil and Gas Exploratory Drilling</b> (continued)</p>	<p><b>D-2 Lease Stipulation</b>  <b>Objective:</b> Minimize surface impacts from exploratory drilling.  <b>Requirement/Standard:</b> Exploratory drilling shall be limited to temporary facilities such as ice pads, ice roads, ice airstrips, temporary platforms, etc., unless the lessee demonstrates that construction of permanent facilities such as gravel airstrips, storage pads, and connecting roads is environmentally preferable or necessary to carry out exploration more economically.</p>
<p><b>E. Facility Design and Construction</b></p>	<p><b>E-1 Required Operating Procedure</b>  <b>Objective:</b> Protect subsistence use and access to traditional subsistence hunting and fishing areas, and minimize the impact of oil and gas activities on air, land, water, fish and wildlife resources.  <b>Requirement/Standard:</b> All roads must be designed, constructed, maintained and operated to create minimal environmental impacts and to protect subsistence use and access to traditional subsistence hunting and fishing areas. Subject to approval by the AO, the construction, operation and maintenance of oil field roads is the responsibility of the lessee. Note: This provision does not apply to intercommunity or other permanent roads constructed with public funds for general transportation purposes. This preserves the opportunity to plan, design and construct public transportation systems to meet the economic, transportation, and public health and safety needs of the State of Alaska and/or communities within NPR-A.</p> <p><b>E-2 Lease Stipulation</b>  <b>Objective:</b> Protect fish-bearing water bodies, water quality and aquatic habitats.  <b>Requirement/Standard:</b> The design and location of permanent oil and gas facilities within 500 ft of fish-bearing or 100 ft of non-fish-bearing waterbodies will only be approved on a case-by-case basis if the lessee can demonstrate that impacts to fish, water quality, and aquatic and riparian habitats are minimal. (Note: Also refer to Area-Specific Stipulations and ROP's for Rivers (Stipulation K-1) and Deep Water Lakes (Stipulation K-2).)</p> <p><b>E-3 Lease Stipulation</b>  <b>Objective:</b> Maintain free passage of marine and anadromous fish, and protect subsistence use and access to traditional subsistence hunting and fishing.  <b>Requirement/Standard:</b> Causeways and docks are prohibited in river mouths or deltas. Artificial gravel islands and bottom-founded structures are prohibited in river mouths or active stream channels on river deltas. Causeways, docks, artificial islands, and bottom-founded structures shall be designed to ensure free passage of marine and anadromous fish and to prevent significant changes to nearshore oceanographic circulation patterns and water quality characteristics. A monitoring program may be required to address the objectives of water quality and free passage of fish.</p> <p><b>E-4 Required Operating Procedure</b>  <b>Objective:</b> Minimize the potential for pipeline leaks, the resulting environmental damage and industrial accidents.  <b>Requirement/Standard:</b> All pipelines shall be designed, constructed, and operated under an AO-approved Quality Assurance/Quality Control plan that is specific to the product transported.</p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

Stipulations and Required Operating Procedures for the Preferred Alternative	
<b>E. Facility Design and Construction</b> (continued)	<p><b>E-5 Required Operating Procedure</b>  <b>Objective:</b> Minimize impacts of the development footprint.  <b>Requirement/Standard:</b> Facilities shall be designed and located to minimize development footprint to the maximum extent practicable considering environmental, economic, and social impacts. Note: Where aircraft traffic is an issue, consideration shall be given to balancing gravel pad size and available supply storage capacity with potential reductions in the use of aircraft to support oil and gas operations.</p>
	<p><b>E-6 Required Operating Procedure</b>  <b>Objective:</b> Reduce the potential for ice-jam flooding, erosion, and restriction of fish passage.  <b>Requirement/Standard:</b> Water crossings shall be designed and constructed to ensure free passage of fish, maintain natural drainage, and minimal adverse effects to natural stream flow. Note: Bridges, rather than culverts, are the preferred structures for crossing rivers. When necessary, culverts can be constructed on smaller streams, if they are large enough to avoid restricting fish passage or adversely affecting natural stream flow.</p>
	<p><b>E-7 Required Operating Procedure</b>  <b>Objective:</b> Minimize disruption of caribou movement and subsistence use.  <b>Requirement/Standard:</b> Pipelines and roads shall be designed to allow the free movement of caribou and the safe, unimpeded passage of the public while participating in traditional subsistence activities. Listed below are the currently accepted design practices:                      a) Above ground pipelines shall be elevated an average of at least 7 ft as measured from the ground to the bottom of the pipeline (except where pipelines intersect a road, pad, in transition zones between buried and elevated pipelines, or at ramps installed to facilitate wildlife passage and subsistence passage and access).                      b) In areas where facilities or terrain may funnel caribou movement, ramps over pipelines, buried pipelines, or pipelines buried under roads may be required by the AO after consultation with Federal, State, and North Slope Borough regulatory and resource agencies (as appropriate, based on agency legal authority and jurisdictional responsibility).                      c) A minimum distance of 500 ft between pipelines and roads should be maintained when feasible. Separating roads from pipelines may not be feasible within narrow land corridors between lakes and where pipelines and roads converge on a drill pad.</p>
	<p><b>E-8 Required Operating Procedure</b>  <b>Objective:</b> Minimize the impact of mineral materials mining activities on air, land, water, fish, and wildlife resources.  <b>Requirement/Standard:</b> Gravel mine site design and reclamation will be in accordance with a plan approved by the AO. The plan shall consider:                      a) Locations outside the active flood plain.                      b) Design and construction of gravel mine sites within active flood plains to serve as water reservoirs for future use.                      c) Potential use of site for enhancing fish and wildlife habitat.</p>

**Table II-03**

**Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

Stipulations and Required Operating Procedures for the Preferred Alternative	
<b>E. Facility Design and Construction</b> (continued)	<p><b>E-9 Required Operating Procedure</b>  <b>Objective:</b> Avoidance of human-caused increases in populations of predators of ground nesting birds.  <b>Requirement/Standard:</b> Lessee shall utilize best available technology to prevent facilities from providing nesting, denning, or shelter sites for ravens, raptors, and foxes. The lessee shall provide the AO with an annual report on the use of oil and gas facilities by ravens, raptors and foxes as nesting, denning, and shelter sites.</p>
	<p><b>E-10 Required Operating Procedure</b>  <b>Objective:</b> Prevention of migrating waterfowl, including species listed under the Endangered Species Act, from striking oil and gas and related facilities during low light conditions.  <b>Requirement/Standard:</b> Except for safety lighting, illumination of higher structures shall be designed to direct artificial exterior lighting inward and downward, rather than upward and outward. All drilling structures, production facilities, and other structures that exceed 20 ft shall be illuminated as outlined above.</p>
	<p><b>E-11 Required Operating Procedure</b>  <b>Objective:</b> Minimize the take of species listed under the Endangered Species Act and minimize the disturbance of other species of interest from direct or indirect interaction with oil and gas facilities.  <b>Requirement/Standard:</b> In accordance with the guidance below, before the approval of facility construction, aerial surveys of breeding pairs of the following species shall be conducted within any area proposed for development.  <b>Spectacled and/or Steller's Eiders</b>                      a) Surveys shall be conducted by the lessee for at least three (3) years before authorization of construction, if such construction is within the FWS North Slope Eider survey area (Map 62), and at least one (1) year outside that area. Results of aerial surveys and habitat mapping may require additional ground nest surveys. Spectacled and/or Steller's eider surveys shall be conducted following accepted BLM-protocol during the second week of June.                      b) If spectacled and/or Steller's eiders are determined to be present within the proposed development area, the applicant shall consult with the FWS and BLM in the design and placement of roads and facilities in order to minimize impacts to nesting and brood-rearing eiders and their preferred habitats. Such consultation shall address timing restrictions and other temporary mitigating measures, construction of permanent facilities, placement of fill, alteration of eider habitat, aircraft operations, and introduction of high noise levels.                      c) To reduce the possibility of spectacled and/or Steller's eiders from striking above-ground utility lines (power and communication), such lines shall either be buried in access roads, or suspended on vertical support members, to the extend practical. Support wires associated with communication towers, radio antennas, and other similar facilities, shall be clearly marked along their entire length to improve visibility for low flying birds. Such markings shall be jointly developed through consultation with FWS.</p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>E. Facility Design and Construction</b> (continued)	<p><b>E-11 Required Operating Procedure (continued)</b> <b>Yellow-billed Loon</b></p> <p>a) Aerial surveys shall be conducted by the lessee for at least 3 years before authorization of construction of facilities proposed for development that are within 1 mi of a lake 25 acres or larger in size. These surveys along shorelines of large lakes shall be conducted following accepted BLM protocol during nesting in late June and during brood rearing in late August.</p> <p>b) Should yellow-billed loons be present, the design and location of facilities must be such that disturbance is minimized. Current accepted mitigation is a one-mile buffer around all recorded nest sites and a minimum 500-m buffer around the remainder of the lake shoreline. Development may be prohibited within buffers or activities curtailed while birds are present.</p> <hr/> <p><b>E-12 Required Operating Procedure</b> <b>Objective:</b> Use of ecological mapping as a tool to assess wildlife habitat before development of permanent facilities, to conserve important habitat types during development. <b>Requirement/Standard:</b> An ecological land classification map of the development area shall be developed before approval of facility construction. The map will integrate geomorphology, surface-form and vegetation at a scale, level of resolution, and level of positional accuracy adequate for detailed analyses of development alternatives. The map shall be prepared in time to plan one season of ground-based wildlife surveys, if deemed necessary by the AO, before approval of exact facility location and facility construction.</p>
<b>F. Use of Aircraft for Permitted Activities</b>	<p><b>F-1 Required Operating Procedure</b> <b>Objective:</b> Minimize the effects of low-flying aircraft on wildlife, traditional subsistence activities, and local communities. <b>Requirement/Standard:</b> The lessee shall ensure that aircraft used for permitted activities maintain altitudes according to the following guidelines:</p> <p>a) Aircraft shall maintain an altitude of at least 1,500 ft above ground level (AGL) when within ½ mi of cliffs identified as raptor nesting sites from April 15 through August 15 and within ½ mi of known gyrfalcon nest sites from March 15 to August 15, unless doing so would endanger human life or violate safe flying practices. Permittees shall obtain information from BLM necessary to plan flight routes when routes may go near falcon nests.</p> <p>b) Aircraft shall maintain an altitude of at least 1,000 ft AGL (except for takeoffs and landings) over caribou winter ranges from December 1 through May 1, unless doing so would endanger human life or violate safe flying practices. Caribou wintering areas will be defined annually by the AO.</p> <p>c) The number of takeoffs and landings to support oil and gas operations with necessary materials and supplies should be limited to the maximum extent possible. During the design of proposed oil and gas facilities, larger landing strips and storage areas should be considered so as to allow larger aircraft to be employed, resulting in a fewer number of flights to the facility.</p> <p>d) Use of aircraft, especially rotary wing aircraft, near known subsistence camps and cabins or during sensitive subsistence hunting periods (spring goose hunting and fall caribou and moose hunting) should be kept to a minimum.</p> <p>e) Aircraft used for permitted activities shall maintain an altitude of at least 2,000 ft AGL (except for takeoffs and landings) over the Caribou Study Area (Map 91) from June 15 through July 31, unless doing so would endanger human life or violate safe flying practices.</p>

**Table II-03**

**Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>F. Use of Aircraft for Permitted Activities</b> (continued)	<p><b>F-1 Required Operating Procedure (Continued)</b> f) Aircraft shall maintain an altitude of at least 2,000 ft AGL (except for takeoffs and landings) over the Caribou Coastal Insect-Relief Areas (Map 91) from June 15 through July 31, unless doing so would endanger human life or violate safe flying practices.</p>
<b>G. Oil Field Abandonment</b>	<p><b>G-1 Lease Stipulation</b> <b>Objective:</b> Ensure the final disposition of the land meets the current and future needs of the public. <b>Requirement/Standard:</b> Upon abandonment or expiration of the lease, all oil- and gas-related facilities shall be removed and sites rehabilitated to as near the original condition as practicable, subject to the review of the AO. The AO may determine that it is in the best interest of the public to retain some or all facilities.</p>
<b>H. Subsistence Consultation for Permitted Activities</b>	<p>"Consultation" may take place by in-person meetings, teleconference, videoconference, and exchange of written documents, e-mail, or other means appropriate to the circumstances. Consultation does not include public meetings that are primarily for the purpose of information distribution, unless it is explained at the beginning of the meeting that there is an open dialogue, and that comments, concerns, or other information are being actively solicited.</p> <p><b>H-1 Required Operating Procedure</b> <b>Objective:</b> Provide opportunities for participation in planning and decision-making to prevent unreasonable conflicts between subsistence uses and oil and gas and related activities. <b>Requirement/Standard:</b> Lessee/permittee shall consult directly with affected communities using the following guidelines. a) Before submitting an application to the BLM, the applicant shall consult with directly affected subsistence communities, the North Slope Borough, and the NPR-A Subsistence Advisory Panel to discuss the siting, timing and methods of proposed operations. Through this consultation, the applicant shall make every reasonable effort, including such mechanisms as conflict avoidance agreements and mitigating measures, to ensure that proposed activities will not result in unreasonable interference with subsistence activities. b) The applicant shall submit documentation of consultation efforts as part of its operations plan. Applicants should submit the proposed plan of operations to provide an adequate time for review and comment by the NPR-A Subsistence Advisory Panel and to allow time for formal government-to-government consultation with Native Tribal Governments. The applicant shall submit documentation of its consultation efforts and a written plan that shows how its activities, in combination with other activities in the area, will be scheduled and located to prevent unreasonable conflicts with subsistence activities. Operations plans must include a discussion of the potential effects of the proposed operation, and the proposed operation in combination with other existing or reasonably foreseeable operations. c) A subsistence plan addressing the following items must be submitted. 1. A detailed description of the activity(ies) to take place (including the use of aircraft). 2. A description of how the lessee/permittee will minimize and/or deal with any potential impacts identified by the AO during the consultation process.</p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>H. Subsistence Consultation for Permitted Activities</b> (continued)	<p><b>H-1 Required Operating Procedure</b> (continued)</p> <p>3. A detailed description of the monitoring effort to take place, including process, procedures, personnel involved and points of contact both at the work site and in the local community.</p> <p>4. Communication elements to provide information on how the applicant will keep potentially affected individuals and communities up-to-date on the progress of the activities and locations of possible, short-term conflicts (if any) with subsistence activities. Communication methods could include holding community meetings, open house meetings, workshops, newsletters, radio and television announcements, etc.</p> <p>5. Procedures necessary to facilitate access by subsistence users to conduct their activities.</p> <p>6. In the event that no agreement is reached between the parties, the AO shall consult with the directly involved parties and determine which activities will occur, including the timeframes.</p> <p>7. During development, monitoring plans must be established for new permanent facilities, including pipelines, to assess an appropriate range of potential effects on resources and subsistence as determined on a case-by-case basis given the nature and location of the facilities. The scope, intensity, and duration of such plans will be established in consultation with the AO and Subsistence Advisory Panel.</p> <hr/> <p><b>H-2 Required Operating Procedure</b></p> <p><b>Objective:</b> Prevent unreasonable conflicts between subsistence activities and geophysical (seismic) exploration.</p> <p><b>Requirement/Standard:</b> In addition to the consultation process described above for permitted activities, before applying for permits to conduct geophysical (seismic) exploration, the applicant shall consult with local communities and residents:</p> <p>a) Because of the large land area covered by typical geophysical operations and the potential to impact a large number of subsistence users during the exploration season, the permittee/operator will notify, in writing, all potentially affected long-term cabin and camp users.</p> <p>b) The official recognized list of cabin and campsite users is the North Slope Borough's 2001 (or most current) inventory of cabins and campsites.</p> <p>c) For the purpose of this standard, potentially affected cabins and campsites are defined as any camp or campsite within the boundary of the area subject to proposed geophysical exploration and/or within 1,200 ft of actual or planned travel routes used to supply the seismic operations while it is in operation.</p> <p>d) A copy of the notification letter and a list of potentially affected users shall also be provided to the office of the appropriate Native Tribal Government.</p> <p>e) Based on that consultation, the AO may prohibit seismic work up to 1,200 ft of any known, long-term, cabin or campsite. Generally, the AO will allow wintertime seismic work to be conducted within 300 ft of a long-term cabin or campsite that is not in use.</p>

**Table II-03**

**Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>I. Orientation Programs Associated with Permitted Activities</b>	<p><b>I-1 Required Operating Procedure</b>  <b>Objective:</b> Minimize cultural and resource conflicts.  <b>Requirement/Standard:</b> All personnel involved in oil and gas and related activities shall be provided information concerning applicable stipulations, required operating procedures, standards, and specific types of environmental, social, traditional, and cultural concerns that relate to the region. The lessee/permittee shall ensure that all personnel involved in permitted activities shall attend an orientation program at least once a year. The proposed orientation program shall be submitted to the AO for review and approval and should:</p> <ul style="list-style-type: none"> <li>a) Provide sufficient detail to notify personnel of applicable stipulations and required operating procedures as well as inform individuals working on the project of specific types of environmental, social, traditional and cultural concerns that relate to the region.</li> <li>b) Address the importance of not disturbing archaeological and biological resources and habitats, including endangered species, fisheries, bird colonies, and marine mammals, and provide guidance on how to avoid disturbance.</li> <li>c) Include guidance on the preparation, production, and distribution of information cards on endangered and/or threatened species.</li> <li>d) Be designed to increase sensitivity and understanding of personnel to community values, customs, and lifestyles in areas in which personnel will be operating.</li> <li>e) Include information concerning avoidance of conflicts with subsistence, commercial fishing activities, and pertinent mitigation.</li> <li>f) Include information for aircraft personnel concerning subsistence activities and areas/seasons that are particularly sensitive to disturbance by low flying aircraft. Of special concern is aircraft use near traditional subsistence cabins and campsites, flights during spring goose hunting and fall caribou and moose hunting seasons, and flights near North Slope communities.</li> <li>g) Provide that individual training is transferable from one facility to another, except for elements of the training specific to a particular site.</li> <li>h) Include on-site records of all personnel who attend the program for so long as the site is active, though not to exceed the 5 most recent years of operations. This record shall include the name and dates(s) of attendance of each attendee.</li> <li>i) Include a module discussing bear interaction plans to minimize conflicts between bears and humans.</li> </ul>
<b>K. Area-Specific Lease Stipulations and Required Operating Procedures</b>	<p><b>K-1 Lease Stipulation–Rivers</b>  <b>Objective:</b> Minimize the disruption of natural flow patterns and changes to water quality; the disruption of natural functions resulting from the loss or change to vegetative and physical characteristics of floodplain and riparian areas; the loss of spawning, rearing or over-wintering habitat for fish; the loss of cultural and paleontological resources; the loss of raptor habitat; impacts to subsistence cabin- and camp-sites; the disruption of subsistence activities; and impacts to scenic and other resource values. (See ROP D-1 for restrictions on exploration activities.)  <b>Requirement/ Standard:</b> Permanent oil and gas facilities, including gravel pads, roads, airstrips, and pipelines, are prohibited in the stream bed and adjacent to the rivers listed below at the distances identified. These setbacks are measured from the centerline of the river as determined by the current hydrology at the time of application. The standard setback is ½ mi and increased to ¾ mi where subsistence cabin- and camp-sites are numerous. Along the Colville River and a portion of the Ikpikpuk</p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>K. Area-Specific Lease Stipulations and Required Operating Procedures (continued)</b>	<p><b>K-1 Lease Stipulation–Rivers (continued)</b>                      a 1-mi setback is required to protect important raptor habitat. (For locations along rivers where setback distances change, see Map 20.) On a case-by case basis, and in consultation with Federal, State, and North Slope Borough regulatory and resource agencies (as appropriate, based on agency legal authority and jurisdictional responsibility), essential pipeline and road crossings perpendicular to the main channel will be permitted (unless noted otherwise) through setback areas. The above setbacks may not be practical within river deltas. In these situations, permanent facilities shall be designed to withstand a 200-year flood event.</p> <p>a) Colville River: a 1-mi setback from the northern bluff (or bank if there is no bluff) of the Colville River extending the length of that portion of the river within the Planning Area. Road crossings intended to solely support oil and gas activities are prohibited. Note: This provision does not apply to intercommunity or other permanent roads constructed with public funds for general transportation purposes. This preserves the opportunity to plan, design, and construct public transportation systems to meet the economic, transportation, and public health and safety needs of the State of Alaska and/or communities within NPR-A.</p> <p>b) Ikpikpuk River: a ¾-mi setback from the centerline of the Ikpikpuk River extending from the mouth south to Sec. 19, T7N, R11W, UM. From Sec. 19, T7N, R11W, UM to Sec. 4 T3N, R12W, UM, a 1-mile setback is required. Beginning at Sec. 4 T3N, R12W, UM, a ½-mi setback will be required to the confluence of the Kigalik River and Maybe Creek. NOTE: setback distances only apply to the west bank where the Ikpikpuk River is the Planning Area boundary.</p> <p>c) Alaktak River: a ¾-mi setback from the centerline of the Alaktak River extending from the mouth to the Ikpikpuk River.</p> <p>d) Chipp River: a ¾-mi setback from the centerline of the Chipp River extending from the mouth to the Ikpikpuk River.</p> <p>e) Oumalik River: a ¾-mi setback from the centerline of the Oumalik River from the mouth upstream to Sec. 5, T8N, R14W, UM, and a ½-mi setback from Sec. 5, T8N, R14W, UM, upstream to Sec. 2, T5N, R15W, UM.</p> <p>f) Titaluk River: a ½-mi setback from the centerline of the Titaluk River from the confluence with the Ikpikpuk River upstream to Sec. 1, T2N, R22W, UM.</p> <p>g) Kigalik River: a ½-mi setback from the centerline of the Kigalik River from the confluence with the Ikpikpuk River upstream to the Planning Area boundary.</p> <p>h) Maybe Creek: a ½-mi setback from the centerline of the Maybe Creek from the confluence with the Ikpikpuk River upstream to Sec. 8, T2S R6W, UM.</p> <p>i) Topagoruk River: a ¾-mi setback from the centerline of the Topagoruk River from the mouth upstream to the confluence with Ishuktak Creek. A ½-mi setback from each bank upstream from the confluence with the Ishuktak to Sec. 3, T7N, R17W, UM.</p> <p>j) Ishuktak Creek: a ½-mi setback from the centerline of Ishuktak Creek from the confluence with the Topagoruk River to Sec. 24, T8N, R16W, UM.</p> <p>k) Meade River: a ¾-mi setback from the centerline of the Meade River upstream to Sec. 6, T6N, R21W, UM. A 1/2-mile setback from each bank upstream from Sec. 6, T6N, R21W, UM to the Planning Area boundary.</p> <p>l) Usuktuk River: a ¾-mi setback from the centerline of the Usuktuk River upstream from the confluence with the Meade River to Sec. 36, T10N, R19W, UM.</p>

**Table II-03**

**Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

Stipulations and Required Operating Procedures for the Preferred Alternative	
<p><b>K. Area-Specific Lease Stipulations and Required Operating Procedures</b> (continued)</p>	<p><b>K-1 Lease Stipulation—Rivers</b> (continued)                      m) Pikroka Creek a 3/4-mi setback from the centerline of the Pikroka Creek upstream from the confluence with the Meade River to Sec. 11, T8N, R23W, UM.                      n) Nigisakturik River: a 3/4-mi setback from the centerline of the Nigisakturik River upstream from the confluence with the Meade River to Sec. 1, T11N, R25W, UM.                      o) Inaru River: a 3/4-mi setback from the centerline of the Inaru River from the mouth upstream to Sec. 17, T15N, R25W, UM.                      p) Kucheak Creek: a 3/4-mi setback from the centerline of Kucheak Creek from the confluence with the Inaru River upstream to Sec. 20, T13N, R24W, UM.                      q) Avalik River: a 1/2-mi setback from the centerline of the Avalik River along that portion of the river within the Planning Area.</p>
	<p><b>K-2 Lease Stipulation—Deep Water Lakes</b>  <b>Objective:</b> Minimize the disruption of natural flow patterns and changes to water quality; the disruption of natural functions resulting from the loss or change to vegetative and physical characteristics of deep water lakes; the loss of spawning, rearing or over wintering habitat for fish; the loss of cultural and paleontological resources; impacts to subsistence cabin- and camp-sites; and the disruption of subsistence activities.  <b>Requirement/ Standard:</b> Permanent oil and gas facilities, including gravel pads, roads, airstrips, and pipelines, are prohibited on the lake or lakebed and within 1/4 mi of the ordinary high water mark of any deep lake as determined to be in lake zone III, i.e., depth &gt; 4m (Mellor, 1985). On a case-by case basis, and in consultation with Federal, State and North Slope Borough regulatory and resource agencies (as appropriate based on agency legal authority and jurisdictional responsibility), essential pipeline, road crossings and other permanent facilities may be permitted through or in these areas where the lessee can demonstrate on a site-specific basis that impacts would be minimal or it is determined that there is no feasible or prudent alternative.</p>
	<p><b>K-3 Lease Stipulation—Dease Inlet, Admiralty Bay, Elson Lagoon, and Associated Barrier Islands</b>                      Lease stipulations for Dease Inlet, Admiralty Bay, Elson Lagoon, and the Barrier Islands, contain specific criteria that have been incorporated into stipulation language. Because of sensitive biological resources and/or subsistence concerns of Dease Inlet, Admiralty Bay, Elson Lagoon, and inland of the Barrier Islands, the standard(s) for exploration and development activities are set high with the burden of proof resting with the lessee to demonstrate to the AO that granting an approval is warranted.  <b>Objective:</b> Protect fish and wildlife habitat, preserve air and water quality, and minimize impacts to traditional subsistence activities and historic travel routes on Dease Inlet, Admiralty Bay, and Elson Lagoon.  <b>Requirement/Standard (Exploration):</b> Oil and gas exploration operations (e.g., drilling, seismic exploration, and testing) are not allowed on Dease Inlet, Admiralty Bay, and Elson Lagoon (including natural and barrier islands), between May 15 and October 15 of each season. Requests for approval of any activities must be submitted in advance and must be accompanied by evidence and documentation that demonstrates to the satisfaction of the Authorized Office that the actions or activities meet all of the following criteria:                      a) Exploration activities will not unreasonably conflict with traditional subsistence uses or significantly impact seasonally concentrated fish and wildlife resources.</p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<p><b>K. Area-Specific Lease Stipulations and Required Operating Procedures (continued)</b></p>	<p><b>K-3 Lease Stipulation–Dease Inlet, Admiralty Bay, Elson Lagoon, and Associated Barrier Islands (continued)</b></p> <p>b) There is adequate spill response capability to effectively respond during periods of broken ice and/or open water, or the availability of alternative methods to prevent well blowouts during periods when adequate response capability cannot be demonstrated. Such alternative methods may include improvements in blowout prevention technology, equipment and/or changes in operational procedures and "top-setting" of hydrocarbon-bearing zones.</p> <p>c) Reasonable efforts will be made to avoid or minimize impacts related to oil spill response activities, including vessel, aircraft, and pedestrian traffic will be conducted to minimize additional impacts or further compounding of "direct spill" related impacts on area resources and subsistence uses.</p> <p>d) The location of exploration and related activities shall be sited so as to not pose a hazard to navigation by the public using high-use traditional subsistence-related travel routes into and through Dease Inlet, Admiralty Bay and Elson Lagoon, as identified by the North Slope Borough, recognizing that marine and nearshore travel routes change over time, subject to shifting environmental conditions.</p> <p>e) Before conducting open water activities, the lessee shall consult with the Alaska Eskimo Whaling Commission and the North Slope Borough to minimize impacts to the fall and spring subsistence whaling activities of the communities of the North Slope.</p> <p><b>Requirement/Standard (Development):</b> With the exception of linear features such as pipelines, no permanent oil and gas facilities are permitted on or under the water within ¾ mi seaward of the shoreline (as measured from mean high tide) of Dease Inlet, Admiralty Bay, and Elson Lagoon or the natural islands (excluding Barrier Islands). Elsewhere, permanent facilities within Dease Inlet, Admiralty Bay, and Elson Lagoon will only be permitted on or under the water if they can meet all the following criteria:</p> <p>f) Design and construction of facilities shall minimize impacts to traditional subsistence uses, travel corridors, seasonally concentrated fish and wildlife resources.</p> <p>g) Daily operational activities, including use of support vehicles, watercraft, and aircraft traffic, alone or in combination with other past, present, and reasonably foreseeable activities, shall be conducted to minimize impacts to traditional subsistence uses, travel corridors, and seasonally concentrated fish and wildlife resources.</p> <p>h) The location of oil and gas facilities, including artificial islands, platforms, associated pipelines, ice or other roads, bridges or causeways, shall be sited and constructed so as to not pose a hazard to navigation by the public using traditional high-use subsistence-related travel routes into and through Dease Inlet, Admiralty Bay and Elson Lagoon as identified by the North Slope Borough.</p> <p>i) Demonstrated year-round oil spill response capability, including the capability of adequate response during periods of broken ice or open water, or the availability of alternative methods to prevent well blowouts during periods when adequate response capability cannot be demonstrated. Such alternative methods may include seasonal drilling restrictions, improvements in blowout prevention technology, equipment and/or changes in operational procedures, and "top-setting" of hydrocarbon-bearing zones.</p>

**Table II-03**

**Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>K. Area-Specific Lease Stipulations and Required Operating Procedures (continued)</b>	<p><b>K-3 Lease Stipulation–Dease Inlet, Admiralty Bay, Elson Lagoon, and Associated Barrier Islands (continued)</b></p> <p>j) Reasonable efforts will be made to avoid or minimize impacts related to oil spill response activities, including vessel, aircraft, and pedestrian traffic that add to impacts or further compound "direct spill" related impacts on area resources and subsistence uses.</p> <p>k) Before conducting open water activities, the lessee shall consult with the Alaska Eskimo Whaling Commission and the North Slope Borough to minimize impacts to the fall and spring subsistence whaling activities of the communities of the North Slope.</p>
	<p><b>K-4 Required Operating Procedure–Brant Survey Area</b></p> <p><b>Objective:</b> Minimize the loss or alteration of habitat for, or disturbance of, nesting and brood rearing brant in the Brant Survey Area.</p> <p><b>Requirement/Standard:</b></p> <p>a) Aerial surveys for brant nesting colonies and brood-rearing areas shall be conducted for a minimum of 2 years before authorization of construction of permanent facilities. At a minimum, the survey area shall include the proposed development site(s) (i.e., the footprint) and the surrounding ½-mi area. These surveys shall be conducted following accepted BLM protocol.</p> <p>b) Development may be prohibited or activities curtailed within ½ mi of all identified brant nesting colonies and brood-rearing areas identified during the 2-year survey.</p>
	<p><b>K-5 Required Operating Procedure–Caribou Study Area</b></p> <p><b>Requirement/Standard:</b> Before authorization of construction of permanent facilities, the lessee shall design and implement a study of caribou movement, especially during the insect season. The study would include a minimum of 3 years of current data on caribou movements. The study design shall be approved by the AO and should provide information necessary to determine facility (including pipeline) design and location. Lessees may submit individual study proposals or they may combine with other lessees in the area to do a single, joint study for the entire Caribou Study Area. Study data may be gathered concurrently with other activities.</p>
	<p><b>K-6 Lease Stipulation–Coastal Areas</b></p> <p><b>Objective:</b> Minimize hindrance or alteration of caribou movement within caribou coastal insect-relief areas; to prevent contamination of marine waters; loss of important bird habitat; alteration or disturbance of shoreline marshes; and impacts to subsistence resources activities.</p> <p><b>Requirement/Standard:</b> In the Coastal Area, permanent oil and gas facilities, including gravel pads, roads, airstrips, and pipelines established to support exploration and development activities shall be located at least ¾ mi inland from the coastline to the extent practicable. Where, as a result of technological limitations, economics, logistics, or other factors, a facility must be located within ¾ mi inland of the coastline, the practicality of locating the facility at previously occupied sites, such as the former Cape Simpson, Peard Bay, or Wainwright DEW-line sites, shall be considered. Use of existing sites within ¾ mi of the coastline shall also be acceptable where it is demonstrated that use of such sites will reduce impacts to shorelines or otherwise be environmentally preferable. All lessees/permittees involved in activities in the immediate area must coordinate use of these new or existing sites with all other prospective users.</p>

**Table II-03  
Stipulations and Required Operating Procedures for the Preferred Alternative (continued)**

<b>Stipulations and Required Operating Procedures for the Preferred Alternative</b>	
<b>K. Area-Specific Lease Stipulations and Required Operating Procedures (continued)</b>	<p><b>K-7 Required Operating Procedure—Colville River Special Area</b>  <b>Objective:</b> Prevent or minimize loss of raptor foraging habitat.  <b>Requirement/Standard:</b> If necessary to construct permanent facilities within the Colville River Special Area, all reasonable and practicable efforts shall be made to locate permanent facilities as far from raptor nests as feasible. Within 15 mi of raptor nest sites, significant alteration of high quality foraging habitat shall be prohibited unless the lessee can demonstrate on a site-specific basis that impacts would be minimal or it is determined that there is no feasible or prudent alternative. Of particular concern are ponds, lakes, wetlands, and riparian habitats. Note: On a case-by case basis, and in consultation with appropriate Federal and State regulatory and resource agencies, essential pipeline and road crossings will be permitted through these areas where no other options are available.</p> <p><b>K-8 Lease Stipulation—Kasegaluk Lagoon Special Area</b>  <b>Objective:</b> Protect the habitat of the fish, waterfowl, and terrestrial and marine wildlife resources of Kasegaluk Lagoon, and protect traditional subsistence uses and public access to and through Kasegaluk Lagoon for current and future generations of North Slope residents.  <b>Requirement/Standard:</b> Within the Kasegaluk Lagoon Special Area, oil and gas leasing is approved subject to the decision to defer the implementation of oil and gas leasing in the "Leasing Deferral Area." When leasing is implemented, no permanent oil and gas facilities are permitted within the boundary of the Special Area. Geophysical (seismic) exploration is authorized subject to the terms and conditions provided in other applicable ROP's. No restrictions are imposed on traditional subsistence activities and access for subsistence purposes.</p>
<b>L. Endangered Species Act Section 7 Consultation Stipulation</b>	<p><b>L Lease Stipulation</b>  The lease area may now or hereafter contain plants, animals, or their habitats determined to be threatened, endangered, or other special status species. BLM may recommend modifications to exploration and development proposals to further its conservation and management objective to avoid BLM-approved activity that will contribute to a need to list such a species or their habitat. BLM may require modifications to or disapprove proposed activity that is likely to result in jeopardy to the continued existence of a proposed or listed threatened or endangered species or result in the destruction or adverse modification of a designated or proposed critical habitat. BLM will not approve any ground-disturbing activity that may affect any such species or critical habitat until it completes its obligations under applicable requirements of the Endangered Species Act as amended, 16 U.S.C. § 1531 et seq., including completion of any required procedure for conference or consultation.</p>

**Notes:**

<sup>1</sup> All-year averaging times not to be exceeded more than once each year, except that annual means may not be exceeded.

<sup>2</sup> Alaska, Department of air-quality standard.

<sup>3</sup> Annual geometric mean.

<sup>4</sup> Class II standards refer to the Prevention of Significant Deterioration (PSD) Program. The standards are the maximum increments in pollutants allowed above previously established baseline concentrations.

<sup>5</sup> The State ozone standard compares with national standards for photochemical oxidants, which are measured as ozone.

<sup>6</sup> The 1-hour standard for ozone is based on a statistical rather than a deterministic allowance for an "expected exceedance during a year."

<sup>7</sup> Annual arithmetic mean.

<sup>8</sup> PM<sup>10</sup> is the particulate matter less than 10 micrometers in aerodynamic diameter.

<sup>9</sup> Attained when the expected annual arithmetic mean concentration, as determined in accordance with 40 CFR 50 subpart K, is equal to or less than 50 µg/m<sup>3</sup>.

<sup>10</sup> Attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m<sup>3</sup>, as determined in accordance with 40 CFR 50, subpart K, is equal to or less than 1.

<sup>11</sup> Maximum arithmetic mean averaged over a calendar quarter.

**Key:**

\* No standards have been established.

µg/m<sup>3</sup> = Micrograms per cubic meter.

<sup>1</sup> Status: A = Abundant; C = Common; FC = Fairly Common; U = Uncommon;

<sup>2</sup> Resident = Present throughout the year.

<sup>3</sup> Database: Most species, average for late June-early July 1986-2002 Breeding Pair Survey area (Mallek, Platte, and Stehn, 2003); Common eider, nearshore area 1999-2002 (Dau and Hodges, 2003); King eider, Snowy owl, Common raven, mid-June average 1993-2002, Eider Survey area (Larned, Stehn, and Platte, 2003); Peregrine falcon, Gyrfalcon, Rough-legged hawk, 1999 (non-Colville River sightings; Ritchie and Wildman, 2000) and 2001 (Colville

River sightings; Swem, 2001, pers. commun.).

<sup>4</sup> Values calculated from mid-June Eider Survey data of Larned et al. (2001) except common eider from Dau and Hodges (2003). The Northwest NPR-A Planning Area = 60% of the total ACP eider survey area.

<sup>5</sup> June indices in Eider Survey area (Larned et al., 2001) except ptarmigan, longspur.

<sup>6</sup> 1992-2002 data.

**Key:**

ACP = Arctic Coastal Plain

km<sup>2</sup> = Square kilometer

– Data not available.

Dau and Hodges, 2003; Larned et al., 2001; Larned, Stehn, and Platte, 2003; Mallek, Platte, and Stehn, 2003; Ritchie and Wildman, 2000; Swem, 2001, pers. commun.

**Table III-08  
Chronology of Activities for Selected Birds Nesting on the Arctic Coastal Plain in NW NPR-A**

	-					Fall Migration
	-		-	-		late August-September
	-	-				late September-early October
	-				-	mid August-early September
	-	-			-	mid August-mid September
			-	-	-	early August-mid September <sup>4</sup>
	-		-	-	-	early August-late October <sup>5</sup>
			-	-	-	late September-October

**Notes:**

- 1 Nonbreeding, failed breeder, molt migrant: late June-early August.
- 2 Nonbreeding young of the previous year and failed breeders molt in late June.
- 3 Includes males, nonbreeders, failed breeders, and females with broods.
- 4 Male pintails depart early July-early August.
- 5 Males stage in Beaufort Sea for 2-3 weeks before molt-migration starts in mid July; females stage in Beaufort Sea mid-July to late August before they depart in early August.

<sup>1</sup> Braund and Burnham, 1984.

<sup>2</sup> CPDB, 1996.

<sup>3, 4, 5, 6, 7</sup> Braund, 1993.

<sup>8, 9</sup> Fuller and George, 1997.

Some cells display two harvest numbers. Brackets indicate estimates derived from interviews with residents. The differences in harvest numbers are based on the differences in interview data vs. tagging data. Not all walrus ivory is tagged and there is always a discrepancy between tagged numbers based on reporting and harvested numbers based on interviews with hunters (Braund, 1993).

[ ] Indicate estimate derived from interviews with residents.

**Annual Bowhead Whale Subsistence Harvest for Wainwright, Barrow, and Nuiqsut (1982-2001).**

Year	Number of Whales		
			Nuiqsut <sup>2</sup>
1982	2	0	1
1983	2	2	1
1984	2	4	0
1985	2	5	1 <sup>3</sup>
1986	3	8	1
1987	4	7	1
1988	4	11	0
1989	2	10	2
1990	4	11	1
1991	4	13	2
1992	0	22	2
1993	4 + 1 stinker	6	3
1994	4	16	0
1995	5	16	4
1996	3	24	2
1997	3	30	3
1998	3	25	4
1999	5	24	3
2000	5	18	4
2001	6	28	3

**Notes:**

<sup>1</sup> Atqasuk whalers participated in the subsistence bowhead hunt by joining Barrow whaling crews.

<sup>2</sup> Before 1982 most Nuiqsut hunters who wanted to hunt whales went spring whaling with one of the other coastal villages.

<sup>3</sup> According to ADF&G (1993a), two Nuiqsut households worked on a successful Barrow whaling crew and received shares equivalent to one-tenth of a whale each (whale weight = 19,625 lbs).

Cases	17	5	23	45
<b>Average Proportion of HH Income Spent in Village (by percent)</b>				
Inupiat HH's	77.5	62.5	82.6	—
Non-Inupiat HH's	13.0	25.0	65.0	—
All HH's	58.5	55.0	81.1	69.7
Cases	17	5	23	45

**Notes:**

<sup>1</sup> Total available households = 55.

<sup>2</sup> Degree of subsistence participation based on how much meat and fish consumed from own household subsistence activity. Levels of subsistence defined as:

Minimal = under 20% meat and fish from own HH subsistence.

Moderate = 20% to 40% meat and fish from own HH subsistence.

Active = over 40% meat and fish from own HH subsistence.

**Key:**

HH = Household Harvest.

**Notes:**

<sup>1</sup> The harvest of arctic cisco and humpback whitefish is underrepresented: one household provided evidence of a significant but unquantifiable harvest by saying that "sled loads" were harvested "every couple of days during October and November."

**Table III-34**  
**Status of Entitlements for Atqasuk, Barrow, and Wainwright**

					Remaining Selected (acres)
<b>Atqasuk Entitlements</b>					
12(a)	69,120	0.00	56,744	14,111.46 <sup>1</sup>	1,391
12(b)	3,834	0.00	0.00	3,834	0.00
<b>Barrow Entitlements</b>					
12(a)	6	140,862.65 <sup>2</sup>	18,842.49 <sup>3</sup>	935.35 <sup>3</sup>	0.00
12(b)	54,530	54,530	--	0.00	0.00
<b>Wainwright Entitlements</b>					
12(a)	115,200	0.00	111,429.34 <sup>4</sup>	3,770.66 <sup>5</sup>	4,041.10
					5,110.00
12(b)	55,670.12	--	55,670.12	0.00	0.00

**Notes:**

<sup>1</sup> A total of 1,735.46 acres was credited for the title recovery of Native Allotments. This is added to the remaining entitlement figure in the above table. The Federal Government currently owns the subsurface estate.

<sup>2</sup> Pursuant to the NARL Agreement, this figure represents Barrow's full entitlement for 12(a).

<sup>3</sup> Based upon the Technical Corrections Act of 1992, an acreage credit of 935.35 acres occurred as a result of the title recovery actions. Barrow also received the subsurface estate for sand and gravel on 68,053 acres for surface acres selected by ASRC under the Gas Field Transfer Act. At present, the Federal Government owns the subsurface, excluding sand and gravel and natural gas, under the village-selected lands and conveyed lands in the Barrow area.

<sup>4</sup> This had 2,713.81 acres subtracted for the title recovery of Native Allotments that are being replaced per the Technical Corrections Act of 1992.

<sup>5</sup> This total will have 39.99 acres added once the Native Allotment title recoveries are complete for F-15473 Parcel D.

**Table III-35**  
**NW NPR-A Wilderness Units and Acreage**

<b>Wilderness Unit</b>	<b>Acres <sup>1</sup></b>
(A) Peard River	979,560
(B) Chipp River	1,714,627
(C) Meade River	1,622,443
(D) Kuk River	978,171
(E) Icy Cape	261,078
(F) Mountains	2,051,289
(G) Foothills	737,526

**Note:**

**Table III-36**  
**Scenic Quality Ratings for NW NPR-A**

			<b>Rating</b>
			Class B <sup>1</sup>
			Class B
			Class C <sup>2</sup>
			Class C
			Class C
			Class B
			Class C
			Class C
			Class C
			Class A <sup>4</sup>

**Notes:**

<sup>1</sup> Class B SQRU has a moderate amount of visual variety, contrast, and harmony.

<sup>2</sup> Class C SQRU has little visual variety, contrast, and harmony.

<sup>3</sup> These units are correctly identified from the 105c Study as applied to the Planning Area.

<sup>4</sup> Class A SQRU has a great deal of visual variety, contrast, and harmony.

**Key:**

SQ = Scenic Quality.

**Table III-37**  
**Land Use Sensitivity Levels for NW NPR-A**

							<b>OR</b>
Inholdings and Camps	H	L	M	L	L	--	L
River Routes	H	M	H	L	L	--	M
Transportation Corridors	H	L	H	L	L	--	M
Coastal Plain	H	M	H	L	L	--	M

**Key:**

- Use = Type of use.
- #Use = Amount of use.
- PI = Public Interest.
- Adj = Adjacent land use.
- SA = Special Area.
- OF = Other Factors.
- OR = Overall Rating.
- H = High.
- M = Medium.
- L = Low.

	Subsistence, Fisheries, Wildlife
	Subsistence, Fisheries, Wildlife
	Essential to ecological function of the largest lagoon and barrier beach system in the North American Arctic.
	Subsistence, Fisheries, Wildlife
	Cultural

**Note:**

<sup>1</sup> BLM has identified the appropriate classification as "scenic" because of the level of development (mainly subsistence cabins and camps), although this does not mean that scenery is an Outstandingly Remarkable Value (ORV). In fact, none of the eligible rivers in the Planning Area have scenery as an ORV. Refer to Section III.C.10 for more detailed descriptions of the values and potential restrictions on development that are required to protect rivers.

**Notes:**

<sup>1</sup> Exploration only. This reflects an \$18/bbl of oil scenario.

<sup>2</sup> Exploration and Development. This reflects a \$30/bbl of oil scenario.

- The assumptions used in the above table are:
- Table reflects two levels of activity. The initial level represents oil and gas exploration corresponding to prices at or below \$18/bbl of oil and \$2.56/Mcf of gas. Commercial development would not be economic at these low prices in the high-cost area of Northwest NPR-A.
- The second level of activity represents the development schedule for the first commercial oil project discovered as a result of the 2004 lease sale.
- Exploration well totals include both dry wells and discoveries.
- Rig totals are maximum number operating in any single year.
- Production to service well ratio is 1:1.
- It is assumed that gas associated with oil recovery will be reinjected until a major transportation system is constructed to move the gas from the North Slope.
- A likely staging base is in the coastal area near Smith Bay.
- Peak production rates are given as millions of barrels per year.
- Pipeline miles do not include in-field flow lines ; only sales oil gathering lines to the KRU. Pipeline miles are for right-of-way corridors that could include several individual pipelines (sales-oil, gas, product/fuel, seawater).

**Key:**

- = Not applicable.
- Expl = Exploration.
- Dev = Development.
- KRU = Kuparuk River Unit.

**Table IV-03**  
**Development Timeframe for a Typical Oil Field**

		<b>Activities</b>
Exploration	1 to 10	<ul style="list-style-type: none"> <li>• seismic surveys to define prospects</li> <li>• well-site surveys and permitting</li> <li>• drill exploration wells</li> </ul>
Discovery	1 to 4	<ul style="list-style-type: none"> <li>• produceable well determination</li> <li>• drill delineation well(s)</li> <li>• additional seismic survey (3-D)</li> <li>• reservoir appraisal and engineering studies</li> <li>• project design and environmental studies</li> <li>• permit applications</li> </ul>
Development	3 to 6	<ul style="list-style-type: none"> <li>• establish construction base camp</li> <li>• set up environmental monitoring programs</li> <li>• install gravel pads for facilities</li> <li>• design and build production modules</li> <li>• begin drilling development wells</li> <li>• install pipelines and pump stations</li> <li>• install production facilities and hookup</li> </ul>
Production	10 to 30	<ul style="list-style-type: none"> <li>• continue development-well drilling</li> <li>• production ramp-up (2 to 5 years)</li> <li>• peak production plateau (3 to 8 years)</li> <li>• production declines</li> <li>• well workovers (every 3 to 5 years)</li> <li>• infill drilling (well spacing reduced)</li> <li>• tertiary recovery methods employed</li> <li>• wells progressively shut in</li> <li>• economic limit reached</li> </ul>
Abandonment	2 to 5	<ul style="list-style-type: none"> <li>• plug and abandon wells</li> <li>• remove production equipment</li> <li>• dismantle facilities</li> <li>• decommission pipeline</li> <li>• site restoration and revegetation</li> <li>• phase out environmental monitoring</li> </ul>

<b>Group Total</b>				1,000	
<b>Offshore Subtotal</b>					1,070
<b>Onshore Subtotal</b>					500
<b>Total</b>					<b>1,570</b>

**Notes:**

<sup>1</sup> Resource estimates are assumed for purposes of cumulative effects analysis only.

<sup>2</sup> Accurate oil volumes for individual fields generally are unavailable as these discoveries have not been adequately delineated or studied for their development potential. Most of these discoveries are presently noncommercial and will require new technology or higher oil prices to be economic. It is possible that many of these pools will remain undeveloped. Future development likely would occur in conjunction with the infrastructure for the fields shown in parentheses.

<sup>3</sup> Resource estimates for Hemi Springs and Ugnu are not included in the above table, but they are included in the 2.0 billion barrels expected to be produced from satellites, pools, and enhanced recovery in existing fields. Gas resources are not listed because commercial production from the North Slope will require a new gas transportation system to reach outside markets.

<sup>4</sup> The oil volume, including the Point Thompson pool, is largely condensate recovered with associated gas production wells. It is assumed that produced gas will be used for field operations (fuel) or be reinjected into reservoirs in nearby oil fields to optimize oil production. Rejected gas could be recovered at some later date when a transportation system for North Slope gas is constructed.

Southern Group		25	20	0	0	0	0	12	12

**Notes:**

<sup>1</sup> Development assumptions:

- Industry will minimize permanent (gravel and sand) roads by using ice roads.
- New pipelines from satellite fields will tie into pipelines from main fields (Alpine, Northstar, Badami, and Kuparuk River).
- Number of pads and wells is estimated from resource volumes.
- Production pad footprints are estimated from number of pads, connecting roads, landfalls/docks, and airstrips.
- Hemi Springs and Ugnu are considered to be examples of satellite development and enhanced oil recovery, respectively, and will be developed using existing infrastructure of the Prudhoe Bay and Kuparuk River fields.

<sup>2</sup> For the list of the oil and gas pools in each group see Table IV-12.

<b>Total</b>	<b>14.642</b>	<b>32,834</b>

**Notes:**

<sup>1</sup> Production and reserve data are as of July 2002.

<sup>2</sup> Gas production to date is from Barrow gas fields supplied for local use to the Barrow community.

<sup>3</sup> All gas production from existing oilfields is used by facilities for fuel or reinjected for reservoir pressure maintenance. No gas production is transported and marketed outside the North Slope.

<sup>4</sup> Future production of natural gas assumes that a transportation system will eventually be constructed to move North Slope gas resources to outside markets. All proposed systems are uneconomic under current conditions.

<sup>5</sup> Includes 2.0 billion barrels in unnamed satellite fields and enhanced oil recovery from existing oil fields. Also includes 0.300 and 0.370 billion barrels estimated for NE and NW NPR-A multiple sales, respectively.

<sup>6a</sup> Includes 50% of the mid-point undiscovered resources between the base case (\$18.00/bbl) and high case (\$30.00/bbl) of the 2000 Beaufort Sea Assessment (MMS).

<sup>6b</sup> Includes the remaining 50% of the mid-point undiscovered offshore resources recoverable between \$18.00 and \$30.00 per barrel of 2000 Beaufort Sea Assessment (MMS).

<b>Arctic National Wildlife Refuge</b>	0 – 6.3	—	USGS ANWR Assessment Team, Open-file Report 98-34.
<b>North Slope-State lands</b>	4.0	—	Informal industry estimates of oil recoverable through enhanced recovery technology and from new, small satellite fields near existing North Slope infrastructure.
	—	32.8	Discovered but undeveloped gas reserves, mainly associated with existing oil fields (Sherwood and Craig, 2000).
<b>Chukchi Shelf</b>	1.0 – 6.1	—	USDOl, MMS (2000)– Update Assessment for 2002-2007 OCS Program.

**Notes:**

1. The resource estimates for the Beaufort Shelf (USDOl, MMS, 2000) and Northern Alaska (U.S. Geological Survey, 1995) are mean undiscovered volumes that are economically recoverable at oil prices between \$18 and \$30 per barrel. Economic resources represent a small fraction of the total recoverable petroleum endowment, much of which is in pools too small or too remote to be economic under the current modeling assumptions. It is impossible to accurately predict the timing of commercial discoveries or future production volumes for speculative resources. Resource estimates often change with new information or modeling assumptions. For example, a new Geological Survey assessment (1998) reports that more economic oil may occur in the small coastal plain of the Arctic National Wildlife Refuge than previously estimated (in the U.S. Geological Survey done in 1995) for all of Northern Alaska.

2. For the cumulative case, regional exploration in Arctic Alaska is not complete and development may be delayed long into the future. The hope for giant oil fields will continue to draw leasing and exploration activities in the future. However, it is unreasonable to speculate on the timing and infrastructure needed to produce resources that have not been discovered. More than 30 trillion cubic feet of gas have been discovered on the North Slope and remain undeveloped because of the lack of a regional transportation infrastructure and market. This huge proven resource base will likely be produced before major exploration efforts are focused on undiscovered gas resources in other onshore areas or in the Beaufort Sea off Alaska.

Pipelines — Trans-Alaska Pipeline System and Future Natural Gas Pipeline Projects**

<b>Project Characteristics and Status</b>		
<b>Active Pipeline Project</b>		
<b>Trans-Alaska Pipeline System (TAPS)</b>	800	<p><b>Characteristics</b>                      Key transportation link for all North Slope oil fields. Since start-up in 1977 TAPS has carried nearly 13 billion barrels of oil. The pipeline corridor that runs between Prudhoe Bay and Valdez contains approximately 16.3 square miles. The Dalton Highway (Haul Road) was constructed parallel to the pipeline between Prudhoe Bay and Livengood. In 1988, TAPS throughput came close to its design capacity of 2 million barrels per day. Present throughput is approximately 1.0 million barrels per day. TAPS' lower operational limit is estimated at between 200,000 and 400,000 barrels per day.</p> <p><b>Regulatory Requirements</b>                      TAPS 30-year Lease Renewal Environmental Impact Statement out for public comment as of October, 2002.</p> <p><b>Current Status</b>                      If oil production from northern Alaska cannot be sustained above minimum throughput, TAPS will not be able to operate, shutting in all North Slope oil production.</p>
<b>Future Natural Gas Pipeline Projects</b>		
<b>Trans-Alaska Gas System (TAGS)</b>	800	<p><b>Characteristics</b>                      The TAGS plan consists of: 1. a LNG-grade pipeline substantially parallel to TAPS from Prudhoe Bay to Valdez, 2. a LNG plant at Anderson Bay near Valdez, and 3. a fleet of new LNG carriers. LNG would be transported to Japan and other Pacific Rim countries. Project design recently scaled back to a 30-inch pipeline able to transport 7 million tons annually.</p> <p><b>Regulatory Requirements</b>                      BLM completed an EIS and granted a federal right-of-way in 1988. A Presidential finding and an export license are in place. A separate EIS, conducted by FERC, covers the Anderson Bay terminal. A conditional State of Alaska right-of-way lease was renewed in 1999 for 10 years.</p> <p><b>Current Status</b>                      Stalled because of no commitment from the North Slope gas producers, lack of delivery contracts to Asian buyers, and high construction costs.</p>

Table continues on next page

**Table IV-24  
Pipelines — Trans-Alaska Pipeline System and Future Natural Gas Pipeline Projects (continued)**

		Project Characteristics and Status
<b>Future Natural Gas Pipeline Projects (continued)</b>		
<b>Alaska Natural Gas Transportation System (ANGTS)<sup>1</sup></b>	2,102	<p><b>Characteristics</b> Connects Alaska North Slope gas production through Canada to markets primarily in the U.S. via a high-pressure pipeline. Parallels TAPS as far as Delta Junction in interior Alaska and then crosses Yukon Territory to connect to existing pipelines in Alberta and the Lower 48.</p> <p><b>Regulatory Requirements</b> BLM completed an EIS and issued a federal grant of right-of-way in 1980. An existing 1978 treaty between the United States and Canada sanctions the proposal. Associated Canadian permits and approvals are in place. The Alaska Natural Gas Transportation Act (ANGTA) of 1976 — in concert with the Presidential Decision of 1977 — provided for the construction of a gas pipeline along the Alaska Highway route. The project has a conditional Federal Energy Regulatory Commission (FERC) certificate.</p> <p><b>Current Status</b> Project proponents have twice begun (but subsequently suspended) the process to secure a State of Alaska right-of-way lease. Downward revisions to construction costs and the recent increase in gas prices into the \$3-4 per million cubic foot range make this project more appealing today. Variations to routes are currently being considered.</p>
<b>Arctic Resources, Northern Gas Pipeline Project</b>	326 offshore 874 onshore	<p><b>Characteristics</b> 52-inch, high-pressure gas pipeline would run offshore from Prudhoe Bay in Alaska to the Mackenzie delta in Northwest Territory and then south through the Mackenzie River Valley to the existing gas pipeline network in northern Alberta. The 326-mile offshore portion would be trenched in 30-60 feet of water. The 874-mile onshore portion also would be buried. Designed to deliver 2.5 billion cubic feet per day to markets primarily in the United States.</p> <p><b>Regulatory Requirements</b> FERC approval, an EIS, a federal right-of-way and a State Lease would be required for this project.</p> <p><b>Current Status</b> Commitments of gas producers and gas buyers have not yet been obtained, nor have the regulatory requirements been met. Requires a consortium of gas producers, pipeline companies, and Native corporations in both Alaska and Canada.</p>

**Table IV-24  
Pipelines —Trans-Alaska Pipeline System and Future Natural Gas Pipeline Projects (continued)**

Project Characteristics and Status		
Future Natural Gas Pipeline Projects (continued)		
<b>Natural Gas to Liquids Conversion<sup>2</sup></b>	Will use existing TAPS Pipeline	<p><b>Characteristics</b>                      GTL is an attractive option because it will use the existing TAPS pipeline (extending its life and lowering future tariffs) and produce clean-burning fuels to meet more stringent Environmental Protection Agency emission standards for vehicles.                      At present, the overall cost of a full-scale gas to liquids project is comparable to a similar sized LNG project. As an emerging technology, new cost-reduction breakthroughs are expected for gas to liquids processing, improving the economic potential for future gas to liquid projects.</p> <p><b>Regulatory Requirements</b>                      Monitoring emission levels of CO<sub>2</sub> and NO<sub>x</sub>.                      Waste waters are discarded to a leach field monitored by well sampling.                      Distillation by-products (salts) are transported and treated in Anchorage by Emerald Services.</p> <p><b>Current Status</b>                      All of the major North Slope gas owners (BP-Amoco, Exxon-Mobil, and Phillips-Alaska) are studying the feasibility of various gas commercialization projects.                      British Petroleum is presently constructing a \$70 million prototype GTL plant at Nikiski, Alaska.                      The plant is scheduled to be operational in 2002. ExxonMobile has also advocated the GTL concept.</p>

**Table IV-26  
Discharge Conditions for a Well Blowout**

	Volume of Oil (Barrels)				15-Day Totals
Well's Discharge Volume	8,000	8,000	8,000	8,000	120,000
Evaporation (30%) <sup>1</sup>	-2,400 <sup>3</sup>	-2,400 <sup>3</sup>	-2,400 <sup>3</sup>	-2,400 <sup>3</sup>	-36,000 <sup>3</sup>
Fall out to Gravel Island	2,800	2,800	2,800	2,800	84,000
Oil Remaining on Gravel Pad	-2,800 <sup>3</sup>	-600 <sup>2,3</sup>	0 <sup>2</sup>	0 <sup>2</sup>	-3,400 <sup>3</sup>
Oil Draining to Ground from Gravel Pad	0	2,200	2,800	2,800	38,600
Oil Falling to Ground	2,800	2,800	2,800	2,800	42,000
<b>Total Oil to the Ground</b>	<b>2,800</b>	<b>5,000</b>	<b>5,600</b>	<b>5,600</b>	<b>80,600</b>

**Notes:**

<sup>1</sup> Evaporation was calculated using a 330-barrel per hour rate and Alpine crude oil characteristics in the Sintef Oil Weathering Model (Reed et al., 2001).

<sup>2</sup> After hour 26, the gravel pad is saturated with oil and all subsequent oil falling on the gravel pad drains to the ground. The gravel pad is assumed to be a 5-acre area.

<sup>3</sup> Negative numbers represent volume that was not included in the model because the amounts do not drain to the ground where they may affect sensitive environmental resources.

<sup>1</sup> All estimates are for levels of annual activity.

<sup>2</sup> This does not include use that is associated directly with oil and gas development or recreation; assumes that fixed-wing aircraft and helicopters are used; assumes that use occurs almost exclusively in summer.

<sup>3</sup> Camps in this category are not associated directly with oil and gas development or recreation; assumes that all camps occur in summer.

<sup>4</sup> Large camps are at least 15 persons and may have 5,000 gallons of fuel. Camps are likely to be located at Umiat, Lonely, Ivotuk, Inigok, and sites near the headwaters of the Kiligwa and Meade Rivers.

<sup>5</sup> Average of 4 persons per party.

<sup>6</sup> Special Recreation Permits, i.e. guided, regulated by BLM.

**Notes:**

-- = Not applicable.

Pipeline mileage does not include in-field flowlines, only gathering lines to central facilities and overland main lines to the existing pipeline network on State lands. Pipeline mileage is for right-of-way corridors that could hold both oil- and gas-sales lines and service lines (product/fuel, seawater, communication).

**Notes:**

<sup>1</sup> Spill-size distribution is allocated by multiplying the total estimated number of spills by the fraction of spills in that size category from the State of Alaska, Department of Environmental Conservation database.

<sup>2</sup> Estimated number of spills is rounded to the nearest whole number.

<sup>3</sup> There are no assumed small crude oil spills and therefore no distribution for the No Action Alternative and Alternative C.

**Key:**

bbl = Barrel.

gal = Gallon.

**Source:**

USDOJ, MMS, Alaska OCS Region, 2002.

**Table App 9-08  
Small Refined-Oil Spills: Estimated Spill Rate for the Alaska North Slope (1989-2000)**

					<b>Spill Rate (Spills/Bbbl Crude- Oil Produced)</b>
Small Refined- Oil Spills	2,243 bbl (94,195 gal)	2,915	0.7	6.6	440

**Note:**

<sup>1</sup> Oil-spill databases are from the State of Alaska, Department of Environmental Conservation in Anchorage, Juneau, and Fairbanks, BP Exploration (Alaska) Inc., and ARCO.

<sup>2</sup> North Slope production data is derived from the TAPS throughput data from Alyeska Pipeline Company.

**Key:**

- bbbl = Barrel.
- Bbbl = Billion barrels.
- gal = Gallon.

**Source:** USDOl, MMS, Alaska OCS Region, 2002.

**Notes:**

<sup>1</sup> The fractional estimated mean spill number and volume are rounded to the nearest whole number.

<sup>2</sup> The mean spill size for refined spills on the Alaska North Slope 1989-2000. Equivalent to 29 gallons.

**Key:**

bbl = Barrel(s).

Bbbl = Billion barrels.

< = Less Than.

**Source:**

USDOJ, MMS, Alaska OCS Region, 2002.

**Table App 9-10  
Fate and Behavior of a Hypothetical 500-bbl Oil Spill from Lagoon Pipelines in Alternative A, Alternative B, and the Preferred Alternative<sup>1,2</sup>**

	Alternative A				Alternative B			
Time After Spill in Days	1.0	3.0	10.0	30.0	1.0	3.0	10.0	30.0
Oil Remaining (percent)	75.4	68.0	44.0	38.0	77.0	71.9	64.3	57.6
Oil Dispersed (percent)	0.6	2.0	8.0	22.0	0.0.0	0.1	0.7	2.4
Oil Evaporated (percent)	24.0	30.0	36.0	40.0	23.0	28.0	35.0	40.0
Thickness (mm)	3.1	1.9	1.1	1.0	4.6.0	2.7	1.5	1.0
Discontinuous Area (km <sup>2</sup> ) <sup>5</sup>	1.0	5.0	25.0	103.0	1.0	7.0	17.0	134.0
Estimated Coastline Oiled (km) <sup>6</sup>		17				16		

**Notes:**

<sup>1</sup> No spills are estimated for any alternative at the \$18/bbl price and the No Action Alternative and Alternative C at the \$30/bbl price.

<sup>2</sup> Calculated with the Sintef oil-weathering model Version 2.0 of Reed et al. (2000) and assuming an Alpine crude type.

<sup>3</sup> Summer (July through September) assumes: 12-knot wind speed, 2 degrees Celsius, and 0.4-meter wave height.

<sup>4</sup> Spill is assumed to occur in May into first-year ice, pools 2 centimeters thick on ice surface for 2 days at 0 degrees Celsius before meltout into 50% ice cover, 11-knot wind speed, and 0.1-meter wave heights.

<sup>5</sup> Calculated from Equation 6 of Table 2 in Ford (1985) and is the discontinuous area of a continuing spill or the area swept by an instantaneous spill of a given volume. Ice dispersion occurs for about 30 days before meltout.

<sup>6</sup> Calculated from Equation 17 of Table 4 in Ford (1985) and is the result of stepwise multiple regression for length of historical coastline affected.

**Key:**

km = Kilometer.

km<sup>2</sup> = Square kilometer.

mm = Millimeter.

<b>Total</b>	<b>2.81</b>	<b>0.23</b>	$\geq 1000$ bbl	—	<b>0</b>	<b>0.65</b>
<b>Onshore</b>						
Past, Present, and Reasonably Foreseeable	7.88	0.64	$\geq 500$ bbl	500–900	5	5.04
Northwest NPR-A Planning Area	0.37	0.64	$\geq 500$ bbl	500–900	0	0.24
<b>Total</b>	<b>8.25</b>	<b>0.64</b>	$\geq 500$ bbl	500–900	<b>5</b>	<b>5.28</b>
Past, Present, and Reasonably Foreseeable	10.68	0.21	$\geq 500$ bbl	4,400	2	2.24
Northwest NPR-A Planning Area	0.37	0.21	$\geq 500$ bbl	4,400	0	0.08
<b>Total</b>	<b>11.05</b>	<b>0.21</b>	$\geq 500$ bbl	4,400	<b>2</b>	<b>2.24</b>
<b>TAPS (Tanker )</b>						
Past, Present, and Reasonably Foreseeable	10.68	0.88	$\geq 1,000$ bbl	Table App 9-15	9	9.40
Northwest NPR-A Planning Area	0.37	0.88	$\geq 1,000$ bbl	Table App 9-15	0	0.32
<b>Total</b>	<b>11.05</b>	<b>0.88</b>	$\geq 1,000$ bbl	Table App 9-15	<b>9</b>	<b>9.72</b>

**Note:**

The Alaska Dept. of Environmental Conservation database has no significant crude oil spills on the North Slope resulting from well blowouts and no facility or onshore pipeline spills greater than 1,000 barrels for the years 1985-2000.

**Key:**

bbl = Barrel(s).

Bbbl = Billion barrels.

— = Data not available or not applicable.

Source: USDOl, MMS, Alaska OCS Region, 2002.

**Table App 9-15  
Estimated Number of Trans-Alaska Pipeline System Tanker Spills, Assumed Sizes and Estimated Volumes**

			<b>Total Volume (bbl)</b>
≤6,000	6	4,000	24,000
>6,000 and ≤15,000	2	13,000	26,000
>15,000	1	250,000	250,000
<b>Total</b>	<b>9</b>	<b>—</b>	<b>294,000</b>

**Notes:**

The distribution of the number of spills is based on the percentage of the number of spills in a similar size category from historic Trans-Alaska Pipeline System tanker spills listed in Table App9-03. The table indicates that 63% are ≤6,000 barrels; 27% are > 6,000 and ≤15,000 barrels; and 9% are >15,000 barrels.

**Key:**

bbl = Barrel(s).  
 ≤ = Less Than or Equal To.  
 > = Greater Than.
