Subject: APS power lines

I would like to make it known that the proposed alternate route on the north side of SR74 is the way to go. It would be reasonable to think that running the transmission lines along an existing corridor is more practical than to meander over native desert. We also have the concern that these transmission lines will be an eye sore to the Vistancia area. With the economy being what it is, I don't need another item to bring down the value of our properties. Thanks for your co-operation. Sincerely, [REDACTED]
