

Form 1: Document Wilderness Characteristics Inventory Findings on Record

Is there existing BLM wilderness characteristics inventory information on all or part of this area?

NO (If no, go to Form 2)
 YES If yes, and if the area has subunits within the broader area, list the unique identifiers for each of those subunits:

Inventory Source: _____
 Inventory Area Unique Identifier(s): 340 002
 Map Name(s)/Number(s): _____
 BLM District(s)/Field Office(s): Front Range District/ Royal Gorge Field Office

BLM Inventory findings on record: Document existing inventory information regarding wilderness characteristics (if more than one BLM inventory area is associated with the area, list each area and answer each question individually for each inventory area):

Document BLM Wilderness Characteristics Findings on Record (Historic Findings)					
Inventory Source Document:					
Area Unique Identifier	Sufficient Size? (YES/NO & acres)	Naturalness (YES/NO)	Outstanding Opportunities for Solitude (YES/NO)	Outstanding opportunities for primitive & unconfined recreation (YES/NO)	Supplemental Values? (YES/NO)

(add rows as needed)

Form 2: Current Conditions: Presence or Absence of Wilderness Characteristics

Area Unique Identifier: COF-020-075, Newlin Creek

Acreage: 178.4 acres

1. Is the area of sufficient size?

Yes No

The land is smaller than 5,000 acres but is contiguous with the United State Forest Service (USFS) roadless recommended wilderness area (managed by Pike/San Isabel National Forest) meeting the size exception 2.a.i.

The unit is bounded as follows:

- The west edge is bounded by the USFS roadless recommended wilderness area;
- The north, south, and east edges are bounded by property lines other than BLM management;
- No wilderness inventory roads were identified within the unit.

2. Does the area appear to be natural?

Yes No NA

The unit, COF-020-075 is located less than 10 miles south of Florence, Colorado and less than 16 miles south of Cañon City, CO (measured to the nearest point). The unit is located west of Florence Mountain Park and just west of Newlin Creek. Unit, CO-020-075 contains 39.0 acres of public land.

The topography of the unit consists of numerous ridges and valleys at the foot hills of the Wet Mountain Range. The vegetation within the unit is comprised of piñon-juniper and gambel oak in the lower elevations with ponderosa and mixed conifers such as Douglas fir and spruce trees in the higher reaches.

The only man-made feature identified within the unit is route, CO-020-071-A, located in the south east corner of the unit. The route appears to have been mechanically constructed by use of a blade. The route is used heavily by motorized vehicles, and allows for recreational access into the unit.

The unit is primarily affected by forces of nature, other than route, CO-020-071-A

3. Does the area (or the remainder of the area if a portion has been excluded due to unnaturalness and the remainder is of sufficient size) have outstanding opportunities for solitude?

Yes ___ No X NA ___

Due to motorized access and proximity to Florence Mountain Park, the unit does not possess opportunities for solitude.

4. Does the area (or the remainder of the area if a portion has been excluded due to unnaturalness and the remainder is of sufficient size) have outstanding opportunities for primitive and unconfined recreation?

Yes ___ No X NA ___

Recreational activities such as hiking, camping, hunting, and sightseeing occur in the unit. Opportunities are not outstanding due to motorized travel and access into the unit.

5. Does the area have supplemental values (ecological, geological, or other features of scientific, educational, scenic or historical value)?

Yes X No ___ NA ___

None observed

- The unit contains Mexican spotted owl critical habitat
- The unit is located within the Wet Mountain Lynx Analysis Unit and contains primary lynx habitat
- The unit contains elk severe winter range and mule deer winter range as mapped by Colorado Parks and Wildlife.

Summary of Analysis:

Unique Identifier: COF-020-075, Newlin Creek

Acreeage: 178.4 acres

Results of Analysis:

Inventory concluded that the 178.4 acre unit does not possess wilderness characteristics due to the lack of outstanding opportunities for solitude and primitive recreation. Outstanding opportunities do not exist due to motorized access into the unit and proximity to the Florence Mountain Park, allowing for many visitors within the area.

The unit is bounded as follows:

- The north edge is bounded by the USFS roadless recommended wilderness area;
- The west, south, and east edges are bounded by property lines other than BLM management;
- The legal description is as follows:
 - o T. 20 S. R. 68 W. Section 26 and 27.

- Does the area meet size requirements or exceptions? Yes No
- Does the area appear natural? Yes No NA
- Does the area offer outstanding opportunities for solitude or a primitive and unconfined type of recreation? Yes No NA
- Does the area have supplemental values? Yes No NA

Check one:

- The area, or a portion of the area, has wilderness characteristics and is identified as land with wilderness characteristics.
- The area does not have wilderness characteristics.

This does not represent a formal land use allocation or a final agency decision, and does not represent a decision in regard to how the area will be managed or address impacts of management decisions.

Form 3: Route Analysis:

The Route Analysis includes factors to consider when determining whether a route is a road for wilderness characteristics inventory purposes. For the purposes of this analysis, use the following definition of a “road”. This definition is drawn from and the FLPMA legislative history and historic BLM inventory direction.

Road: An access route which has been improved and maintained by mechanical means to insure relatively regular and continuous use. A way maintained solely by the passage of vehicles does not constitute a road.

- a. Improved and maintained – Actions taken physically by people to keep the road open to vehicle traffic. “Improved” does not necessarily mean formal construction. “Maintained” does not necessarily mean annual maintenance.
- b. Mechanical means – Use of hand or power machinery or tools.
- c. Relatively regular and continuous use – Vehicular use that has occurred and will continue to occur on a relatively regular basis. Examples are: access roads for equipment to maintain a stock water tank or other established water sources, access roads to maintained recreation sites or facilities, or access roads to mining claims.

If a portion of a route is found to meet the wilderness inventory road criteria (see Part III) and the remainder does not meet these criteria (e.g., a cherrystem road with a primitive route continuing beyond a certain point), identify each segment and explain the rationale for the separate findings.

Wilderness Characteristics Inventory Area Unique Identifier: COF-020-071, Newlin Creek Creek

Route or Route Segment Name and/or Identifier: CO-020-075-A

I. LOCATION:

Refer to attached map and BLM corporate data (GIS). List photo point references (where applicable) or reference attached photo log:

Map Title: Unit COF-020-75, Newlin Creek, Wilderness Characteristics Map

Map Date: 2013

Describe:

The map shows the parcel inventoried for wilderness characteristics.

II. ROUTE CONTEXT

The purpose of a route is not a deciding factor in determining whether a route is a road for wilderness characteristics inventory purposes. The purpose of a route does provide context for factors on which such a determination may be based, particularly the question of whether maintenance of the route ensures relatively regular and continuous

use. The purpose also helps to determine whether maintenance that may so far have been unnecessary to ensure such use would be approved by BLM when the need arises.

A. Current Purpose (if any) of Route: (Examples: rangeland/livestock improvements (stock tank, developed spring, reservoir, fence, corral), inholdings (ranch, farmhouse), mine site, concentrated use site (camp site), recreation, utilities (transmission line, telephone, pipeline), administrative (project maintenance, communication site, vegetation treatment)).

CO-020-075-A is currently used for recreational access.

B. Right-of-Way (ROW):

B.1. Is there a ROW associated with this route?
Yes _____ No X Unknown _____

If yes, what is the stated purpose of the ROW?
N/A

B.2. Is the ROW still being used for this purpose?
Yes _____ No _____ Unknown or N/A _____

Explain: N/A

III. WILDERNESS INVENTORY ROAD CRITERIA

A. Is there evidence of construction or improvement using mechanical means?
Yes, if either III.A.1 *or* III.A.2 is checked "yes" below X
No, if both III.A.1 *and* III.A.2 are checked "no" below _____

Route, Co-020-75-A appears to have been mechanically constructed or maintained at one time.

A.1. Construction: Is there evidence that the route or route segment was originally constructed using mechanical means?
Yes _____ No X

A.2. Improvements: Is there evidence of improvements using mechanical means to facilitate access?
Yes X If "yes", improvements by? Hand Tools _____ by Machine _____
No _____

It appears that route, CO-020-075-A has been mechanically improved at one time.

B. Maintenance: Is there evidence of maintenance that would ensure *relatively* regular and continuous use?

Yes, if either III.B.1 or III.B.2 is checked "yes" below X

No, if both III.B.1 and III.B.2 are checked "no" below

B.1. Is there evidence or documentation of maintenance using hand tools or machinery?

Yes X If "yes", maintenance by? Hand Tools by Machine

No

Evidence of mechanical maintenance is apparent for regular and continuous use.

B.2. If the route or route segment is in good condition, but there is no evidence of maintenance, would mechanical maintenance with hand tools or machines be approved by BLM to meet the purpose(s) of the route in the event this route became impassable? "Good condition" would be a condition that ensures regular and continuous use relative to the purposes of the route. Consider whether the route can be clearly followed in the field over its entire course and whether all or any portion of the route contains any impediments to travel.

Yes X No

Yes, the route is in good condition.

C. Relatively regular and continuous use: Does the route or route segment ensure relatively regular and continuous use?

Yes X No

Explain: Describe evidence (e.g., direct: vehicles or vehicle tracks observed; or indirect: evidence of use associated with purpose of the route such as maintenance of facility that route accesses) and other rationale for whether use has occurred and will continue to occur on a *relatively* regular basis (regular and continuous use relative to the purpose(s) of the route). Include estimate of travel rates for the stated purposes (e.g., trips per day, week, month, season, year, or even multiple years in some facility maintenance cases).

Yes, route, CO-020-075-A receives regular and continuous use.

IV. CONCLUSION:

Does the route or route segment meet the definition of a wilderness inventory road (i.e., are items III.A and III.B and III.C all checked yes)? If part of the route meets the wilderness inventory road definition and the remainder does not, describe the segment meeting the definition and any remaining portion not meeting the definition and why. Also, describe and explain rationale for any discrepancies with citizen proposals.

Yes = Wilderness Inventory Road
No = Not a road for wilderness inventory purposes

No wilderness inventory roads were found within the unit.
