

**LUP AMENDMENT/MAINTENANCE SHEET**  
**Office: Tres Rios Field Office      Plan Name: Tres Rios Field Office Resource Management Plan and Record of Decision (Feb 2015)**

**Maintenance Change No. :** 002      **Program:** GIS, NLCS-lands with wilderness characteristics

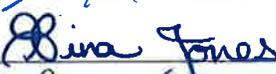

**LOCATION AND DESCRIPTION OF CHANGE**

<b>Decision Number:</b>	<b>Page/Line Number:</b>	<b>DESCRIPTION OF CHANGES</b>
3.2.1, Figure 3.2 data	II-133	Minor corrections and adjustments were made along the east and southern portions of the Snaggletooth (lands managed as wilderness characteristics) unit shapefile to correct alignment issues along the BLM/Forest Service boundary. The issue was a result of using spatial data with undefined or incorrectly defined coordinate systems. In most cases the adjustments were minor, and not visible when mapping this unit at small scales. The correction doesn't affect Figure 3.2 on page II-133 in RMP, at this scale the changes aren't visible. Also, minor corrections and adjustments were made to the shapefile along the northeastern portion of the unit where there is an existing power line to exclude the poles and access road. These structures and infrastructure were never part of the unit and were clipped out.

**RATIONALE/JUSTIFICATION**

The data and shapefile of the Snaggletooth lands with wilderness characteristic unit's boundary needed to be corrected so the accurate data layer is maintained. The projection of the map (Figure 3.2, page II-133) is not affected because the boundary didn't show at that scale.
