To Whom It May Concern

Re: Bay Weanling Stud Colt

On October 27<sup>th</sup> I examined the above horse and found him to have a severe flexor tendon contraction on the Right Front leg causing a club foot on the Right Front and significant overload on the Left Front. The disorder was likely present at birth and the condition will continue to deteriorate. He was euthanized due to poor long term prognosis of soundness without aggressive surgical correction which still may not resolve the deformity due to the chronic nature.

Jeremy J. Key, DVM
