Subject Letter of protest--Wayne National Forest

This letter is to voice my extreme reservations about the proposed lease sale of tracts in the Wayne National Forest for oil and gas development, especially with regards to the possibility of development employing hydrofracturing in the Wayne. There is ample evidence that this technology can deplete and/or contaminate the water supply, endangering the health, safety and economies of communities in which it is employed. The economic gains of oil and gas extraction are typically short-lived for the communities from which the resources are taken and pale in comparison to the many long-term negative affects risked by implementing hydrofracturing.

Sincerely,

Kathryn C. White
