No Permit or Contract is required for the following Personal, Non-Commercial Uses of renewable resources. (43 CFR 8365.1-5) This section allows for the collection of reasonable amounts of commonly available, renewable resources such as flowers, berries, nuts, seeds, cones and leaves for noncommercial use. This includes forest products for use in campfires while on Public Lands. The following table establishes the reasonable quantities for each product.

<u>Special Forest Product</u>	<u>Unit of Measure</u>	<u>"Personal Use Only" Reasonable Amount per Person per Year</u>
Berries - All Species	Gallons	3 per Species
Cones - Ornamental	Bushels	2
Cones - Seed	Bushel	1
Greenery	Pounds	20
Moss	Pounds	10
Mushrooms - All Species	Gallons	5 per Species

Forest/Vegetative Product Minimum Price List - Montana/Dakotas – October 2005

¹ Several Field Offices have indicated that their current index price for forest products is higher than the minimum price list. No attempt is being made to establish a maximum price for any forest product. The Local forest products appraiser may establish a higher price for any forest product when based on a local market appraisal.

² Minimum Prices for these products applies to both Personal and Commercial Uses. Biomass is in Green Tons, approximately 40% moisture content.

³ Includes sawtimber, houselogs, mine timbers, ties, large and small poles.

⁴ These factors are the average conversion factors and are based on the past 3 years of long form timber sale contract data. These may change as more timber sale data becomes available. The conversion is 1 MBf = 2.27 CCf or 1000Bf = 227Cf. This conversion factor may be used when an actual cruise conversion is not available.

⁵ These factors are from the Timber Sale Information System and are the standard BLM conversion factors for the listed products. This conversion is 1000 Bf = 163 Cf or $1000\text{Bf}/6.13 = 163\text{Cf}$. This conversion factor is to be used for all vegetative sales utilizing form 5450-5a.

⁶ All forest products will be appraised and sold at or above the appraised price or at the State Minimum Price listed for those products, whichever is the higher. Exceptions to this may occur on a case by case basis when the authorized officer determines and documents in the official case file that the net positive benefits to other resources such as forest health, recreation, wildlife, watershed, etc., will occur and that existing forest productivity will not be degraded.
