Dear Sirs:

Re: Proposed Leasing of Lewisville, Tx. Lake for fracking purposes

I wish to enter a protest for this proposition. We live in a development with a view of the lake and have for 19 years. More and more construction and environmental invasions have been happening and the natural beauty of the lake is being destroyed. Each instance proclaims it is for the better good, but is not a natural element the reason we all flock to the area? Fracking is everywhere in Denton county as it is, and there is no need to continue to invade the area with wells. Most deposits can be reached with the wells already in place.

There's also the worry of the stabilization of the Lewisville dam.....it needs work to ensure its integrity for the future and fracking is known to cause problems, look at area quakes in Texas and Oklahoma that weren't there before this technology. There is no way to assure the people of the area that the same ground movement problems won't occur here.

The smell of the fumes and the disposal of the water also create concerns for wildlife, wells and the people of the area. How can anyone see more positives in this proposal than negatives? I hope you will consider this negative and loud protest when you consider your actions regarding the lease of the lake.

Asking for reason,

Eleanor Ismert
