

Veterinary Report (11/23/2010)

Lahontan HMA

On 11/19/2010, I euthanized a one-year-old Lahontan male horse for BLM. The horse had an old healed fracture or dislocation involving his right hind fetlock joint. He was noticeably lame (grade III) and in much worse body condition (body condition score II) than his herd mates. His hoof was severely deformed from the injury. Prognosis for any return to function was poor. Euthanasia was elected based on BLM euthanasia criteria and policy.
