BLM/FS Nevada – Northeastern California FEIS for GRSB Habitat

### Summary

The dataset was developed to support the National Sage-Grouse Planning Strategy Nevada and northeastern California planning region. This dataset supports the alternatives for the GRSB FEIS 2015

### Description

It emphasizes balancing resources and resource use among competing human interests, land uses, and the conservation of natural and cultural resource values, while sustaining and enhancing ecological integrity across the landscape, including plant, wildlife, and fish habitat. This alternative also seeks to provide for no net unmitigated loss in and outside PHMAs and GHMAs in areas where GRSB use has been observed or suspected, areas and habitats that may be necessary to maintain the viability of GRSB populations, or where the activity would affect GRSB or its habitat in PHMAs or GHMAs, as described below.
