Subject tapping of ground water

Dear Sir or Madam:

I really feel that more time and evaluation needs to be given to this project. In the first place the summertime is the busiest time of the year for those it will affect most - the ranchers and farmers. They don't have time right now to be able to prepare lengthy arguments as to how this will adversely affect them. They are too busy in the fields.

Also the long term effects of such a project are something that have to be carefully considered, because you can't reverse the dire effects this project could cause anymore than you can reverse the effects of a tornado or hurricane or tsunami. Once done it'll never be the same again and can cause irreversible damage.

Regards,
John Ordway
