Dear Becky,

It's difficult for me to imagine any gain that would be worth risking the sole source aquifer in this valley. Since no one seems to fully understand the deep "plumbing" of the Glenn Canyon aquifer, the only acceptable course of action is to protect it from the invasive processes of oil or gas exploration/extraction.

The public (consisting of residents, ranchers, farmers, and the businesses operating in this valley) is counting on you to operate in their best interest. Any very short term gain that might come from drilling cannot outweigh the long term interests of the public. I refer specifically to parcel 042 and generally to any parcel which adjoins the Moab watershed. Thank you for your time and consideration.

Bonita Kolb
