

Dense Concentrations of Jumbled Bones

NOTICE ANYTHING UNUSUAL ABOUT THIS DEPOSIT?

Although the bone layer is only about three feet thick, the Cleveland-Lloyd Dinosaur Quarry contains more Jurassic dinosaur bones per cubic foot than have been reported anywhere else in the world.

This large map shows the position of most of the bones that have been excavated.

Part of the intrigue of the Cleveland-Lloyd bonebed is its wonderfully preserved bones, which are found both scattered and complete. How does it all fit together?

LEGEND
