

## Accessing REA Data, Maps, & Models through SharePoint

### BLM Personnel & REA Collaborator Access

---

To access REA data and map services through the BLM network, follow the steps provided below. They will take you to a Department of Interior (DOI) SharePoint site from which you can:

- Download the **final report, task memos**, and other REA documents,
- Review lists of the major components of an REA such as the **management questions, conservation elements**, and **change agents** addressed in the assessment,
- Review a list of data used in and produced by an REA and **download data** packages,
- Review a list of maps which correspond to the maps in the final report and **view maps interactively online or stream them to your own GIS**, and
- Review a list of models used in the REAs and download the model and script files and their supporting documentation.

*NOTE: Users must have a DOI Windows Active Directory login to access this site. Non-BLM collaborators of the REAs (e.g., state government personnel, other federal agencies) should contact their Assessment Management Team (AMT) lead to request access to this site.*

---

### Login into the DOI REA SharePoint Site

To enter the REA SharePoint site, go to: <https://connect.doi.gov/blm/NOC/REA> .

When prompted, enter your Windows Active Directory login credentials and click the Log On button.

- Include your DOI agency acronym in your UserName. For example, Bureau of Land Management (BLM) personnel use the following format: blm\jsmith.
- **Non-BLM collaborators of the REAs should contact their Assessment Management Team (AMT) lead to request access to this site.**

If you are directed to an error page regarding the certificate, select: "Continue without Certificate (not recommended)".

## Review the REA SharePoint Homepage

The REA SharePoint homepage provides access to data and products for all completed REAs. Review the documents and lists in the table of contents on the left side of the page for pertinent information such as a list of REAs, the abbreviations used in REA products, and file naming conventions for data and maps.

To access data, maps and other products for a specific REA, select the corresponding tab (labeled by its 3-letter acronym) in the menu bar near the top of the page.

See the **list of three-letter acronym for REAs** at the bottom of this page or click on the List of REAs in the table of contents. They are used frequently throughout the SharePoint site.

**Locations of Rapid Ecoregional Assessments (REAs)**

Legend  
Ecoregion(s) in REAs\*  
\* Hatched areas of ecoregions were not assessed

REAs shown on map: Northern Great Basin, Middle Rockies, Northwestern Plains, Wyoming Basin, Central Basin and Range, Colorado Plateau, Mojave Basin and Range, Sonoran Desert, Madrean Archipelago, Chihuahuan Desert, Seward Peninsula, North Slope, Yukon Kuskokwim

**Blackfoot River Valley, MT (BLM)**

[List of REAs](#)

REA Code	REA Name (ecoregions within, if more than one)	Status	Site Link
CBR	Central Basin and Range	Public Release	<a href="#">CBR Site</a>
SGP	Southern Great Plains (Central Great Plains, High Plains, Southwestern Tablelands)	In Progress	
CHD	Chihuahuan Desert	In Progress	
COP	Colorado Plateaus	Public Release	<a href="#">COP Site</a>
MAR	Madrean Archipelago	In Progress	

## Review Individual REA SharePoint Subsites

The front page of an individual REA SharePoint subsite (such as "COP" for the Colorado Plateau REA) describes the various products that are available to you such as documents, lists, and catalogs.

The table of contents displayed on the left side of your screen provides quick access links for REA data and products. Refer to the sections below for guidance on accessing each of these products.

Due to the large number of maps and datasets available, we recommend user first review the *Final Report* for an REA (under *Documents* section) to help determine which datasets are of most interest.

The screenshot shows the SharePoint interface for the Colorado Plateau (COP) REA. At the top, there is a navigation bar with 'Site Actions', 'Browse', and 'Page' options. The user's name 'Mclachlan, Megan M' is visible in the top right. Below the navigation bar, the site title 'COP Home' and subtitle 'Subsite for the Colorado Plateau REA' are displayed. A search bar is located on the right side of the page. The left navigation pane is highlighted with a red box, showing links for 'Documents', 'Management Questions', 'Elements & Agents', 'Map Catalog', 'Data Catalog', and 'Model Catalog'. A red arrow points to the 'COP' link in the top navigation bar. The main content area features a welcome message, a list of resources, and a map of the Colorado Plateau REA. The map shows the REA boundary in green and is surrounded by states like Wyoming, Colorado, Nevada, Utah, Arizona, and New Mexico. A legend indicates 'Level III Ecoregion(s) in REA' and 'Analysis Extent of REA'. Below the map, there is a photo of Rattlesnake Canyon, CO (BLM).

## Download REA Documents

The final report, task memos, and presentations can be downloaded by clicking on the *Documents* link in the table of contents.

## View Maps through the Map Catalog

Maps can be accessed through the Map Catalog located under the table of contents. The Map Catalog lists and describes available maps and allows users to view maps in a variety of ways (e.g., in ArcGIS.com, ArcMap).

- **Before accessing a map**, first review the catalog's descriptive information, including:
  - the map title and a brief description of its subject matter,
  - a list of Management Question(s) and/or Conservation Elements and Change Agents that are addressed in the map, and
  - a list of figures in the final report which correspond to the map. Refer to the final report for more detailed information about a map's subject matter.
  
- **When you have determined which map you would like to access**, click one of its corresponding hyperlinks:
  - [ArcGIS.com](#) – click to view a map online in ArcGIS.com. This option requires no software, only internet access. Use the *BLM ArcGIS.com* link if you are BLM personnel or the *Public ArcGIS.com* link if you are a collaborator. See the following section on ArcGIS.com for more information on this feature.
  - [Map Service](#) – click to access a map through a services directory. This link will take you to an ArcGIS Services Directory where you can opt to view the map in ArcView, ArcGIS Explorer, ArcGIS JavaScript, Google Earth, or ArcGIS.com. All of these viewing applications require installation of software expect for ArcGIS.com. Use the *BLM Map Service* link if you are BLM personnel or the *Public Map Service* link if you are a collaborator. See the following section on Map Services for more information on this feature.

Maps are listed alphabetically in the Map Catalog. You can **search for a specific map name or a key word** using the *Search this Site...* tool in upper right corner of the catalog (see screenshot below).

The screenshot shows the SharePoint interface for the Colorado Plateau REA. The left-hand navigation pane contains several links, with 'Map Catalog' highlighted by a red rectangular box. The main content area features a welcome message and a list of resources: 'Final Report', 'Management Questions', 'Conservation Elements and Change Agents', and 'Map, Data, and Model Catalogs'. Below this list is a photograph of Rattlesnake Canyon, CO, with the caption 'Rattlesnake Canyon, CO (BLM)'. On the right side of the page, there is a map of the Colorado Plateau REA. The map shows the 'Level III Ecoregion(s) in REA' and the 'Analysis Extent of REA'. The map includes a legend, a scale bar, and a north arrow. The map also shows the surrounding states of Wyoming, Colorado, Nevada, Utah, Arizona, and New Mexico.

Screenshot of a Map Catalog

Map Title	Map Description	BLM ArcGIS.com Link	BLM Map Service Link	Public ArcGIS.com Link	Public Map Service Link	Management Q
Colorado Plateau Ecoregion (COP)	This map shows the location of the Colorado Plateau Ecoregion.	<a href="#">BLM ArcGIS.com</a>	<a href="#">BLM Map Service</a>	<a href="#">Public ArcGIS.com</a>	<a href="#">Public Map Service</a>	
COP Change Agents - Climate Change	This map shows climate parameters and MAPSS biogeography model data for the western US from PRISM (1968-1999), and future climate projections from the regional climate model RegCM3 using ECHAM5, GENMOM, and GFDL projections as boundary conditions for 2015-2030, and 2045-2060.	<a href="#">BLM ArcGIS.com</a>	<a href="#">BLM Map Service</a>	<a href="#">Public ArcGIS.com</a>	<a href="#">Public Map Service</a>	
COP Change Agents - Climate Change - Long-Term Potential For Change	This map shows long-term potential for climate change, which was calculated using a logic model to integrate the factors of: vegetation change summer & winter temperature change annual precipitation change runoff change.	<a href="#">BLM ArcGIS.com</a>	<a href="#">BLM Map Service</a>	<a href="#">Public ArcGIS.com</a>	<a href="#">Public Map Service</a>	
COP Change Agents - Development - Current, Near-Term, and Long-Term Potential High Landscape Development	This map shows areas of high current, near-term, and long-term potential landscape development, based on factors such as urban areas, agriculture, roads, and energy development.	<a href="#">BLM ArcGIS.com</a>	<a href="#">BLM Map Service</a>	<a href="#">Public ArcGIS.com</a>	<a href="#">Public Map Service</a>	G1

**ArcGIS .com**

The ArcGIS .com link will open a session of ArcGIS.com interactive map service which will display the map you selected (see screenshot below). In ArcGIS.com you can interact with the map and even add additional data to the map if desired. Once the map is loaded, you can:

- Click on the Details tab to **access the Legend and Table of Contents** (see graphic below).
  - the Legend shows which layers are currently displayed in the map, and
  - the Table of Contents allows you to see all data layers in the map and select which to turn on or off.
- Click on the Add or Basemap tabs to **add data** from your either computer or from public data services.
- Use the tools at the top of the map **Print, Share, or Save** a map. There are also tools that allow you to **zoom, pan and measure**.
- **You cannot download data** directly from the ArcGIS.com.
  - If you would like to download a dataset seen in the map, note its name and go to the Data Catalog to download that data or use the ArcGIS service to stream the map.

### Map Services

The Map Service Link will bring up an *ArcGIS Service Directory* providing details about the map service including data layers, query options, map display, and KML generation. You can stream the ArcGIS Services to your own local GIS software application using the ArcGIS rest service URL. For example:

- If you have **ArcMap** installed on your local computer, you can click on the ArcMap hyperlink in the directory to open/save the map as an MXD.
- Similarly, if you have any of the other listed software applications installed (e.g., Google Earth), simply click the corresponding hyperlink to view the map in that application.

## Download Data through the Data Catalog

Data can be downloaded through the Data Catalog located in the table of contents. The Data Catalog lists and describes available datasets and provides download access to them.

- **Before downloading a dataset**, first review the catalog's descriptive information, including:
  - the title and a brief description of the data subject matter, and
  - its Metadata, which can be viewed by clicking on the corresponding hyperlink.
- **To download a dataset**, click either the Download (BLM) link (if you are BLM personnel) or the Download (Public) link (if you are a collaborator). Data are downloaded as layer package files (.lpk) or zipped files (.zip) which include a dataset and corresponding layer file(s).
  - You will be asked to save a zipped file (.zip) or a layer package file (.lpk), both of which contain the data file (in vector or raster format) and corresponding layer file(s). Layer files store the symbology used to display the data (i.e., color schemes, symbols, labels).
    - If you download a zipped file, you must "Save" the file locally and unzip the file before you can view the data or layer file(s) contained within. Once unzipped, add the data or layer files to an ArcMap project. Zipped files may contain multiple layer files which correspond to one dataset; the multiple layers files allow you to view the same dataset in different ways.
    - If you download a layer package, you can either:
      - Click "Save" to save the .lpk file locally. You can add it to an ArcMap project by dragging and dropping the layer package from ArcCatalog or, from within ArcCatalog, right-click the layer package and select "Unpack".
      - Click "Open" and ArcMap will automatically open a new project (MXD) containing the data. If you want to keep the data, you must save it from within ArcMap or go back to the Data Catalog, click the Download link, and click "Save".
  - The files names for the dataset and layer file(s) contained in the zipped files and layer packages are listed in the Data Catalog for you reference.

Datasets are listed alphabetically in the Data Catalog. You can **search for a specific map name or a key word** using the *Search this Site...* tool in upper right corner of the catalog (see screenshot below).

## Download Models & Scripts through the Model Catalog

Models and scripts can be downloaded through the Model Catalog located in the table of contents. The Model Catalog lists and describes available datasets and provides download access to them.

→ **To download a model or script**, click on the [Download](#) link.

- You will be asked to save a zipped file (.zip) which contains the model or script files and supporting documentation if available.
  - Save the file locally and unzip it. Once unzipped, open the model or script file in the appropriate software.
  - Most models are in ArcGIS ArcToolbox format (.tbx) and most scripts are written in Python (.py).
  - The input data used in the models and scripts are available in the Data Catalog.
- **Multiple models are often grouped into a single downloadable file** according to the REA Data Type and Category that they address (e.g., in the screen shot below, five models that each addresses some aspect of Development are all included in the COP\_DV\_Toolbox.zip file).

Models are listed by data type and category and are grouped into Toolbox or Folders accordingly. You can **search for a specific map name or a key word** using the *Search this Site...* tool in upper right corner of the catalog (see screenshot below).

The screenshot displays the SharePoint interface for the Colorado Plateau (COP) REA. At the top, there's a navigation bar with 'Site Actions', 'Browse', and 'Page'. Below this, the 'NATIONAL SYSTEM OF PUBLIC LANDS' logo is visible. The main navigation menu on the left includes 'RE Data Catalog', 'Documents', 'Management Questions', 'Elements & Agents', 'Map Catalog', 'Data Catalog', and 'Model Catalog' (highlighted with a red box). The main content area features a welcome message, a list of resources (Final Report, Management Questions, Conservation Elements and Change Agents, and Map, Data, and Model Catalogs), and a map of the Colorado Plateau REA. The map shows the analysis extent of the REA and Level III Ecoregions. A photograph of Rattlesnake Canyon, CO is also visible.

*Screenshot of a Model Catalog*

The screenshot shows a SharePoint interface with a search bar at the top right, circled in red, containing the text "Search this site...". Below the search bar is a table with the following columns: REA Data type, REA Category, Model, and Download Toolbox/Folder. The table lists various models such as "Climate Potential for Change by HUC5", "Allotments", and "Current Development at 4km".

REA Data type	REA Category	Model	Download Toolbox/Folder
Change Agent	Climate Change	Climate Potential for Change by HUC5	<a href="#">COP_CL Toolbox</a>
Change Agent	Climate Change	Climate Potential for Change at 4km	<a href="#">COP_CL Toolbox</a>
Change Agent	Development	Allotments	<a href="#">COP_DV Toolbox</a>
Change Agent	Development	Current Development at 4km	<a href="#">COP_DV Toolbox</a>
Change Agent	Development	Long-term Development at 4km	<a href="#">COP_DV Toolbox</a>
Change Agent	Development	Long-term Development by HUC5	<a href="#">COP_DV Toolbox</a>
Change Agent	Development	MQG2 - Potential Development and Conflict with Conservation Elements	<a href="#">COP_DV Toolbox</a>
Change Agent	Development	Near-term Development at 4km	<a href="#">COP_DV Toolbox</a>
Change Agent	Development	Recreation High-use Area	<a href="#">COP_DV Toolbox</a>
Change Agent	Fire	MQE1 - Areas Changed by Wildfire	<a href="#">COP_FI Toolbox</a>
Change Agent	Fire	MQE2 - Areas with Potential to be Changed by Wildfire	<a href="#">COP_FI Toolbox</a>
